

DVRPC IREG Geospatial and Open Source Event

Delaware Valley Regional Planning Commission Information Resources Exchange Group

AGENDA

10:30 am Welcome / IREG Business

10:40 am Robert Cheetham (Azavea) - "The Future of Geospatial Technology"

11:20 am John Duchneskie (Philadelphia Inquirer) – "How journalists use geospatial technologies for reporting"

11:40 am Aaron Ogle (OpenPlans) - Leaflet

12:00 pm Lunch / Network

12:45 pm Member Roundtable

1:00 pm Andrew Hill (Vizzuality/CartoDB) - CartoDB

1:20 pm Dana Bauer (Rackspace) & Michele Schmitt (ManetoMapping) - Balloon Mapping in Public Spaces

1:40 pm Lauren Gilchrist (Center City District) – "Federal Open Data (ACS, LED & BEA)"

2:00 pm Andrew Thompson (Azavea) - "Your New Partners: Understanding Civic Hacking, Why You Should be Involved, and How to Get Started"

2:20 pm Coffee Break

2:30 am Mike Tedeschi (Azavea) - "Designing Apps for the Masses"

2:50 pm Atanas Entchev (Entchev) - "Developers and users: Divided by a common language"

3:10 pm John Reiser (Rowan University) - "Web Maps: the Next Boring Thing"

3:45 pm CartoDB Workshop

Presentation Summaries

Robert Cheetham (Azavea) - "The Future of Geospatial Technology"

Robert will discuss some recent trends and developments in geospatial technology and how this is changing what we can image for the future.

John Duchneskie (Philadelphia Inquirer) – "How journalists use geospatial technologies for reporting"

The Philadelphia Inquirer uses geospatial technology not only for producing routine maps, but also as a vital reporting tool to help determine news coverage. John Duchneskie, the graphics editor at the Inquirer, will show examples of how his newspaper identified trends and produced information graphics through data analysis and GIS software.

Aaron Ogle (OpenPlans) – Leaflet

Leaflet is a simple yet extensible JavaScript library for creating web maps. Aaron will review the features of Leaflet and show how OpenPlans uses it in their urban planning and community engagement applications.

Andrew Hill (Vizzuality/CartoDB) -CartoDB

CartoDB is a cloud based mapping, analysis and visualization engine that lets users build spatial applications for both mobile and web. Andrew will review the key features of CartoDB and talk about how organizations and users are using it throughout the world.

Dana Bauer (Rackspace) & Michele Schmitt (ManetoMapping) - Balloon Mapping in Public Spaces

Community plays a big role in the success of open-source projects. But growing a community can be challenging. Public Lab, a DIY environmental science organization, attracts a diverse group of contributors to its open-source software and hardware projects. In the talk, Dana and Michele will explore lessons on community building from Public Lab.

Lauren Gilchrist (Center City District) - Federal Open Data (ACS, LED & BEA)

Although much is being done at the local level to open administrative and other government data sources, the U.S. Federal Government continues to provide some of the most accurate data on critical economic and social indicators, increasingly through developer-friendly platforms. Lauren will discuss some of the data available via the U.S. Census Bureau, Bureau of Labor Statistics, and Bureau of Economic Analysis and how it can be accessed and used.

Andrew Thompson (Azavea) - "Your New Partners: Understanding Civic Hacking, Why You Should be Involved, and How to Get Started"

The old image of a civic hackathon - volunteer software developers in a room with pizza and coffee for a weekend working on websites and apps that solve any number of social ills - sounds too good to be true, because it is. There are real benefits to be gained by governments that get involved in civic hacking and take the time to nurture partnerships with civic hackers and communities around their data, but free labor is not one of them. Hackathons and the apps that come out of them should be seen as an investment; important, preparative stepping stones that get disparate agencies and governments to share, describe, and think about their available data in new ways. This talk will explore many recent civic hackathons, data/APIs, and apps from the Philly area, examine what benefits agencies can gain from participating in these events, and finish with some advice for planning and executing great civic hackathons.

Mike Tedeschi (Azavea) - "Designing Apps for the Masses"

It's easy to build a map-based application, but it's hard to create one that people actually want to use. Through this presentation, we'll take a look at user-experience design methods and techniques and apply them to real life projects. You'll walk away with a new toolset – and hopefully a change in mindset – that will help you build apps that are meaningful and useful.

Atanas Entchev (Entchev) – "Developers and users: Divided by a common language"

Makers and users of software are often at stark odds with each other. Why is that, and what can each group do to bridge the communication gap and make life easier for all.

John Reiser (Rowan University) - "Web Maps: the Next Boring Thing"

In the rush to bring your data to the web, remember that usability is key. Your audience and their feedback is what should drive your development process. We will discuss several ways you can make your mapping applications responsive to your audience's needs.

About Our Presenters

Robert Cheetham, Azavea

Robert Cheetham is the founder and president of Azavea. Robert has an MLA in Landscape Architecture and Regional Planning from the University of Pennsylvania and a BA in Japanese Studies from the University of Michigan. Prior to founding Azavea, Robert served as a software developer and analyst for the Philadelphia Police Department, the University of Pennsylvania, and the City of Philadelphia. Prior to living in Philadelphia, he served as a Coordinator for International Relations in Konan-cho, Japan.

John Duchneskie, Philadelphia Inquirer

John Duchneskie is the Graphics Editor at the Philadelphia Inquirer, where he has worked since 1985. He edits and produces information graphics for print and online and analyzes data to help determine news coverage. John's work has been honored by the Society for News Design, the Society for Professional Journalists, the Associated Press Sports Editors, and the Pennsylvania Newspaper Association, and he has taught information graphics at the University of Missouri. John lives in South Jersey and is upset that Roy Halladay retired as a Toronto Blue Jay.

Aaron Ogle, OpenPlans

Aaron believes that software is a powerful tool that can be used to build for a better world, and he loves designing applications to make cities more livable, beautiful, and just. He is a software developer at OpenPlans where he develops applications to address challenges surrounding urban planning and community engagement.

Andrew Hill, Vizzuality+CartoDB

Biologist, programmer, coffee enthusiast. Andrew is a Senior Scientist with Vizzuality where he continues to explore merging science and technology together in new ways. His ultimate goal is a future full of open source tools and easily accessible data the will empower scientific discovery for a better world.

Dana Bauer, Rackspace

Dana is a developer and community advocate at Rackspace. Her team supports OSS projects, provides outreach to open communities, and builds tools to help developers use the open cloud.

Michele Schmitt, ManetoMapping

Michelle Schmitt is the principal of Maneto Mapping & Analysis. For over 10 years she has worked with nonprofits, local governments and small businesses to turn data into useful information. Michelle's work is based in the belief that good maps are a powerful tool for seeing and understanding complicated patterns and that good data analysis tells a compelling story.

Lauren Gilchrist, Center City District

Lauren Gilchrist currently serves as the Manager of Research and Analysis at Philadelphia's Center City District and has been working for the organization since September 2012. Lauren is responsible for research and writing for all major CCD research publications, including residential, retail, and State of Center City reports; conceptualizing and conducting original data collection, including data on residential development projects and retail establishments; and ongoing real estate and economic research for policy initiatives. Lauren holds an MS in Public Policy & Management from Carnegie Mellon University.

Andrew Thompson, Azavea

Andrew Thompson works as the Community Evangelist at Azavea, where he supports and fosters the user communities around Azavea's open source geospatial products, and engages the wider civic technology and open data communities by hosting and attending hackathons, conferences, and other events. He holds a BA from Haverford College in Growth and Structure of Cities with a minor in Computer Science, where he wrote his senior thesis on open source software and its role in the open government movement. Andrew loves biking, drinks tea but not coffee, and relishes any opportunity to converse in Spanish.

Mike Tedeschi, Azavea

Michael is an interactive user-interface, user-experience designer with over seven years of professional experience working with web, mobile, other interactive touch-screen devices. He is currently the Lead UI/UX Designer at Azavea, building web and mobile apps, and also runs Interactive Mechanics, an interactive UI/UX design consultancy.

Atanas Entchev, ENTCHEV GIS

Atanas Entchev is the principal of ENTCHEV GIS Architects – a commercial and municipal GIS consulting company based in New Brunswick, New Jersey. Mr. Entchev has over 20 years of experience as a GIS professional. He is responsible for the successful design and implementation of GIS systems for more than 30 municipalities and Utility Authorities across New Jersey. He is also a widely-published author on GIS industry topics.

John Reiser, Rowan University

John Reiser is the Coordinator of the Geospatial Research Lab at Rowan University. Through the GeoLab, he conducts and manages research projects relating to urban planning, environmental stewardship and facilities management. John has 8 years experience working with GIS and has worked in a private planning firm and for the State of New Jersey's planning office before taking the reins of the GeoLab at Rowan. John also contributes to the GIS community through the release of open source software and has a keen interest in making data more accessible to the general public. John lives in Glassboro with his wife Kate and two children. A cycling enthusiast, he rides his bike to work throughout the year.

OPEN DATA ABOUT OUR CHANGING PLANET

MOTIVATION

We want to help people understand the planet and make better decisions. By giving people a view of the Earth in near real-time, we intend to spur people, companies, and governments to action. Planet Labs will be providing an entirely new data set -- unprecedented coverage and frequent imagery of the planet. This new information will inform future humanitarian, ecological and commercial endeavors.

The Blue Marble is a photograph of Earth taken by Apollo 17 astronauts in 1972 and is credited with popularizing the environmental movement. What the Blue Marble did for global awareness, Planet Labs will do for global action.

PRINCIPLES

Do Good.

We are a purpose-driven company and we care deeply about positive impact through the use of information and space technologies. In addition to creating value for our

Homicides in Philadelphia

Since 1988, over 9,000 people have been slain on the streets of Philadelphia, affecting every neighborhood in the city. To put that deadly toll in perspective, during the length of U.S. combat operations in the Iraq war, 3,517 American troops were killed in action - and 3,113 people were killed in Philadelphia. Explore the data below with the maps and charts or view the entire list of homicide victims

Changes in Crime by Neighborhood

by Casey Thomas, Jan. 31, 2013

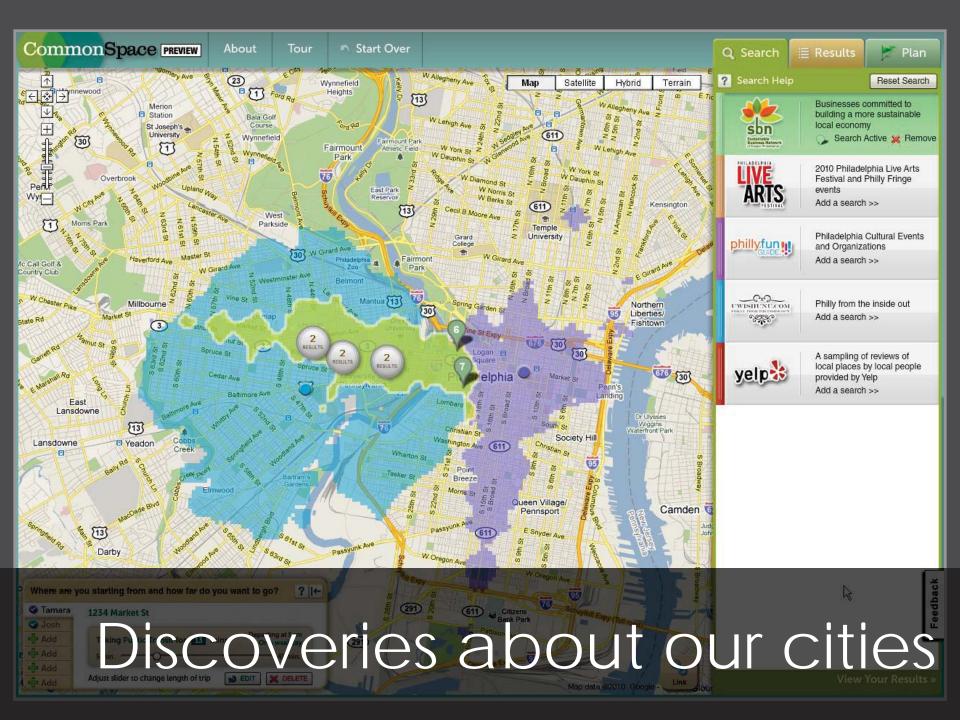

The recent release of Philadelphia crime data going back to 2006 allows us to analyze changes in crime from year to year. On the which violent crime has decreased across the city. But, on the neighborhood level, crime has stayed the same or even increased in some are since 2007. Related Story \rightarrow

The Use of Open Data and Grassroots Efforts in Crisis Response

Date: Jul 10, 2013 By: Sarah Cordivano Tags: crisis response, Open Data, OpenDataPhilly, Sandy A couple of weeks ago, we experienced a tragedy here in Philadelphia; a badly mismanaged building demolition caused the deaths of several people. Out of this tragedy, however, I observed some surprising and creative uses of open government data that suggest future uses in crisis response.

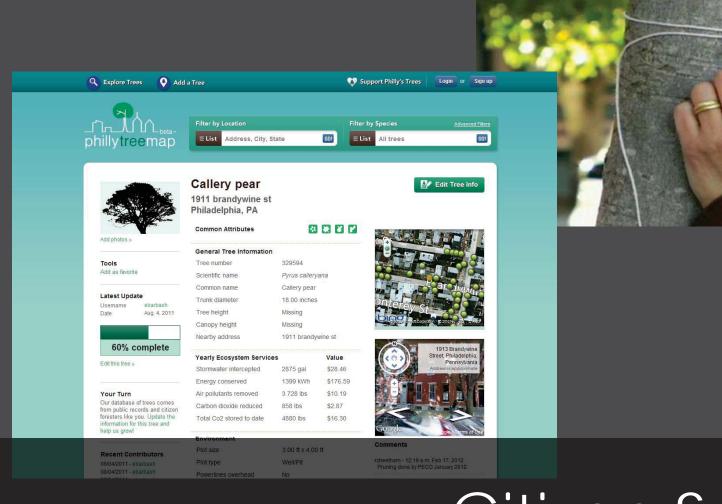

Open government data serves as a valuable asset to citizens because it allows them to access information that may have been previously unavailable, unobtainable or costly. The role of open, publicly accessible data is multifaceted. This liberated data not only improves the transparency of government operations, but also encourages economic and community development by empowering the public to use the data as a resource. For example, someone planning to move into a new city may use data about school catchments, property values and social service resources to make an informed decision about where to move. A construction business owner can use licensing violation data to help target his marketing efforts and gain new clients. Additionally, open data can start a dialog between the government and its community which often results in the opportunity for improved data quality and new analysis.

The release of open data by governments has gained momentum and recognition. There are now 100's of cities around the world as well as several national governments that operate open data portals. I think the benefits offered –

RHoK #3

Calling all developers, geeks, designers, and hackers!

RHoK is an event and competition combining technology with disaster relief, social development, climate change, and human rights to create immediately applicable solutions to real world problems. Drawing on the talents and initiative of the brightest hackers and problem-solvers from around the world, here's a chance to volunteer your time and hack for humanity.

Show up at 9am on Saturday, June 4th with a team of 2-4 hackers (or just show up and join a team there!). Pick one of the dozens of available social impact problem definitions - or come up with your own - and see what you can make by Sunday afternoon. The best projects will be featured across the globe.

This event is FREE and open to the public.

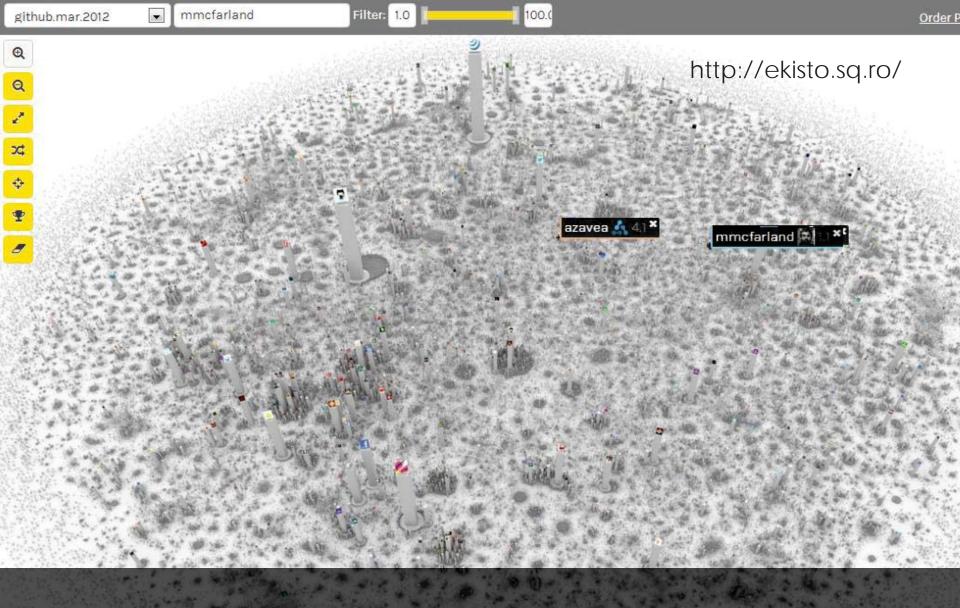

We will provide food, Internet, power, and logistics. Just bring your laptop!

Keynote Speaker: Roger Dingledine of the Tor Project (torproject.org)

Center City gets younger

More folks in their 20s, 30s have been settling there.

By Jeff Gammage, John Duchneskie, and Dylan Purcell INQUIRER STAFF WRITERS

The beat of a lively downtown is evident in full tables at restaurants such as El Vez, in lines to see movies at the Ritz theaters, and even in the strut of the dog walkers who traverse Rittenhouse Square.

That energy is no illusion. An explosion of 20- and 30-somethings is changing the look of Philadelphia and helping to drive a dining, shopping, and arts scene that thrives in the face of a dismal economy.

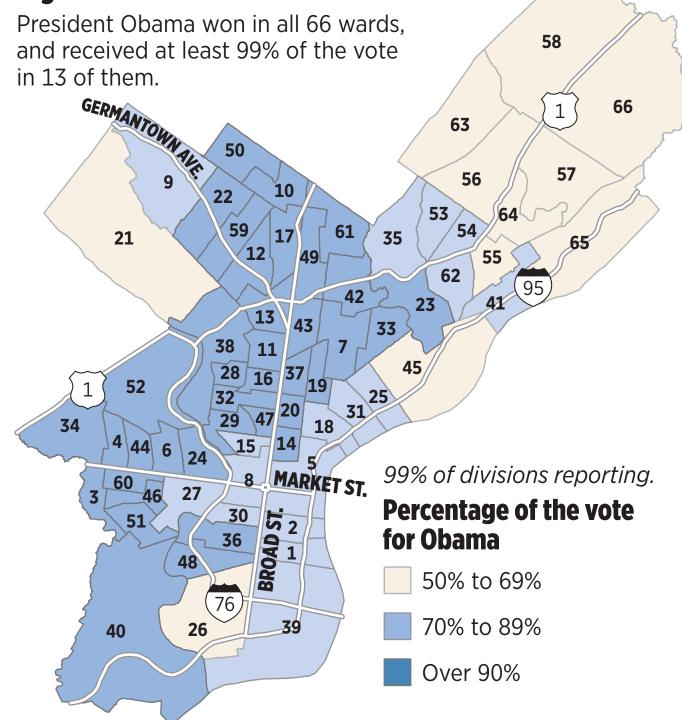

New census figures document the youth movement:

• Northern Liberties had dramatic growth in the number of people in their 20s and 30s, up 77 percent in 10 years. The neighborhood gained 2,500 more young adults — who now constitute a majority, leaping from 37 percent to 53 percent of neighborhood residents. See **CENSUS** on A16

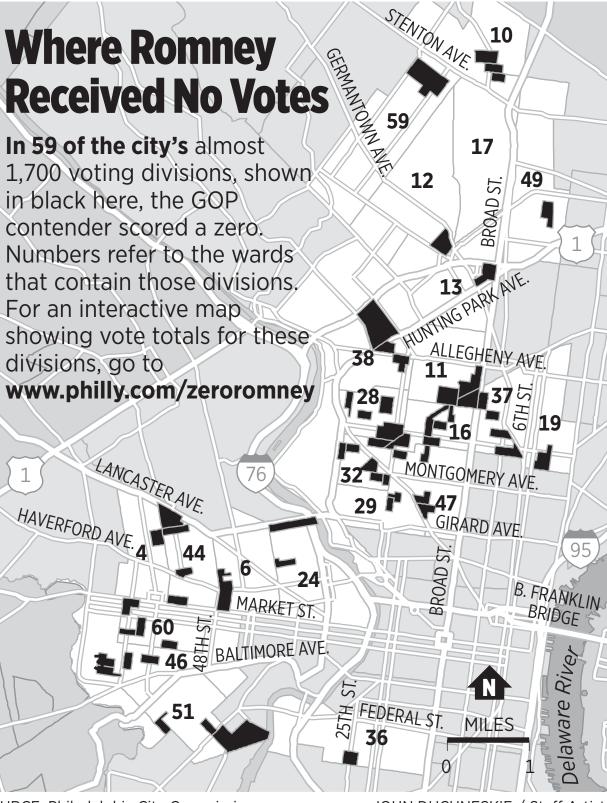

TOM GRALISH / Staff Photographer **Dining, shopping, arts** are magnets that have made young adults a majority in some areas, the census reports. This is 18th and Locust.

Philadelphia Vote for President, By Ward

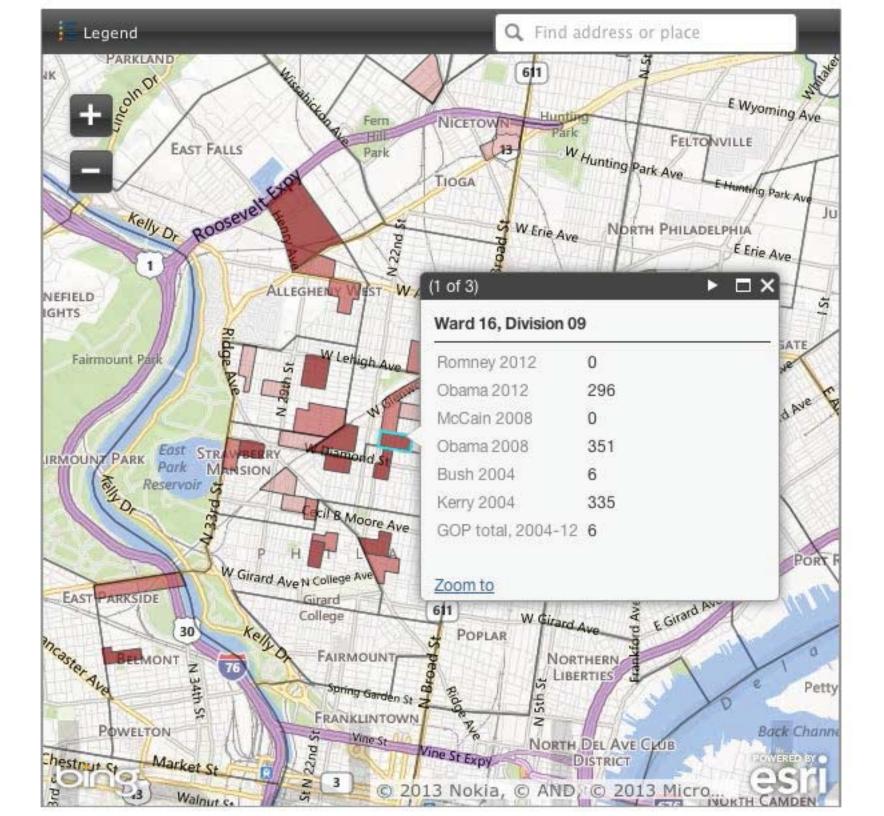

In 59 of the city's almost 1,700 voting divisions, shown in black here, the GOP contender scored a zero. Numbers refer to the wards that contain those divisions. For an interactive map showing vote totals for these divisions, go to

Romney earned zero votes in some urban precincts

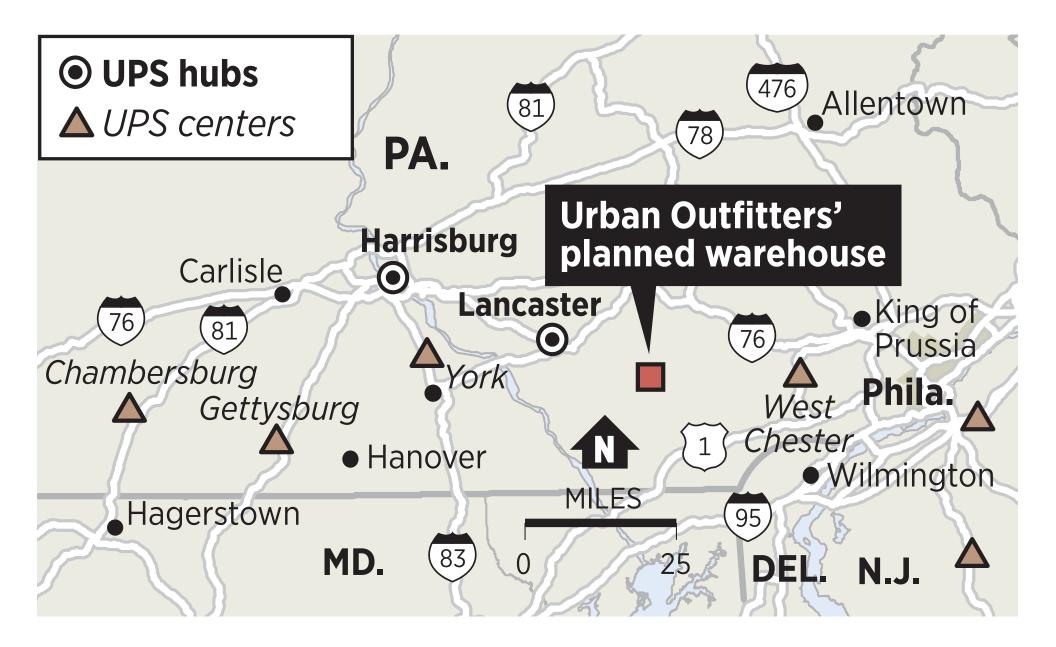

Republican presidential candidate, Mitt Romney, speaks at the podium as he concedes the presidency during Mitt Romney's campaign election night event at the Boston Convention & Exhibition Center on November 7, 2012 in Boston, Massachusetts. ALEX WONG/GETTY IMAGES

I Comment / I Shares / I Tweets / I Stumble / Email More +

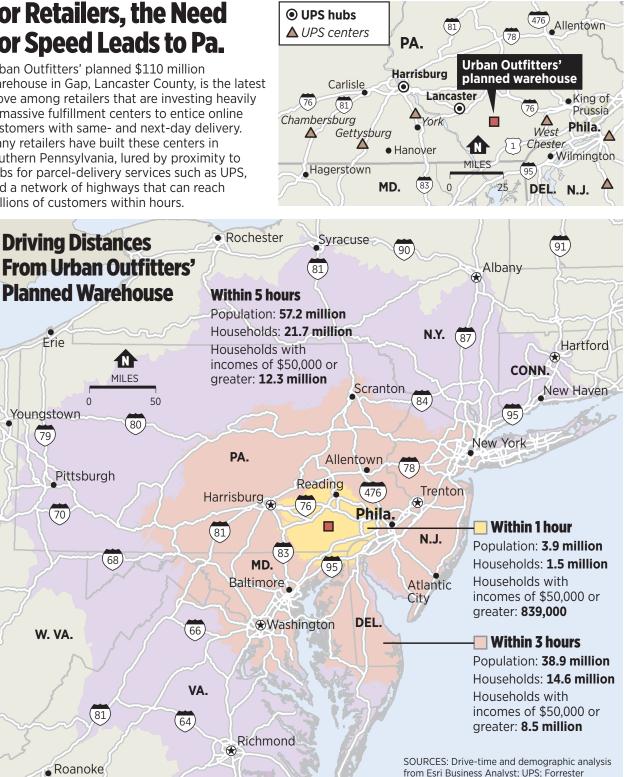

President Obama's victory over Mitt Romney in last Tuesday's presidential election was driven, in part, by the president's strength in urban areas, where robust support cushioned the incumbent against electoral deficits in rural America. But almost a week after the election, it is now becoming clear just how lopsided President Obama's victory was in some cities: in dozens of urban precincts, Mitt Romney earned literally zero votes.

The Phildadelphia Inquirer reported today that, in 59 precincts in inner-city Philadelphia, the GOP nominee received not a single vote. And according to the Cleveland Plain Dealer, nine precincts in Cleveland returned zero Romney votes.

For Retailers, the Need For Speed Leads to Pa.

Urban Outfitters' planned \$110 million warehouse in Gap, Lancaster County, is the latest move among retailers that are investing heavily in massive fulfillment centers to entice online customers with same- and next-day delivery. Many retailers have built these centers in southern Pennsylvania, lured by proximity to hubs for parcel-delivery services such as UPS, and a network of highways that can reach millions of customers within hours.

Retail giants swarm online

Store-based operations are putting warehouses near here.

By Maria Panaritis INQUIRER STAFF WRITER

They are rising in farm country west of King of Prussia like giant garrisons positioned to deploy packages to shoppers up and down the Atlantic Coast: automated warehouses of herculean proportions aimed at moving online orders to people's doorsteps in just hours.

Philadelphia's Urban Outfitters Inc. is among a rush of titanic store-based retailers spending staggering sums to open online fulfillment centers closer than ever to customers, in a red-hot patch of Pennsylvania along the state's toll-free I-81 spine.

Development officials say they are witnessing a surge of interest in building warehouses that can pick, pack, and ship people's orders at lightning speed. The mad dash is fueled by the promise of same-day and overnight delivery, an ante set by Internet-only Amazon, a \$61 billion player whose own billions spent thus far are a powerful incentive. "Their job," e-commerce expert Michael Golden said of Amazon, "is to make sure you don't want to shop anywhere else."

Stepping up its game Oct. 7 with a big-money announcement was Philadelphia-based Urban, a front-runner in e-commerce.

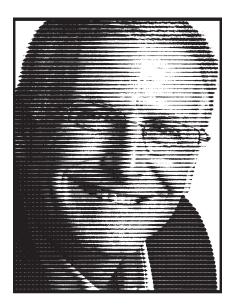

The retailer, with headquarters at the Navy Yard, announced it would break ground this month on a million-squarefoot center on 52 acres in Lancaster County for products span-

Big cities rarely realize the fiscal impact of depopulation. One solution: Realign density by "clear-cutting" land use.

Joel L. Naroff *Random Economics*

Detroit is bankrupt — will Philadelphia follow?

Should our city pursue the solutions currently in vogue, or do we look for other approaches? My view is that if you have a brain tumor, you don't get relief by treating the headache it causes, since you will still die from the cancer. Failing to address the underlying causes of the financial problems will only lay the founda-

North 21st Street, Philadelphia. Even if few still live on a block, the city must provide services. ELIZABETH ROBERTSON / Staff Photographer

Unfortunately, this is a harsh solution with huge human costs. People must be relocated, hopefully to better areas with improved housing. Indeed, new housing must be developed first so the receiving neighborhoods are more desirable alternatives. Though "clear-cutting" increases density, most of those relocated will be poor, who have little other than their homes. And let's face it — there is a racial component to this. This reminds people of urban renewal, which was nicknamed "black removal." That makes it difficult to even consider such a policy, let alone implement it.

Joel L. Naroff Random **Economics**

Population change in Philadelphia, 1950 to 2010

Population change within Philadelphia from 1950, the year of the city's peak population, to 2010.

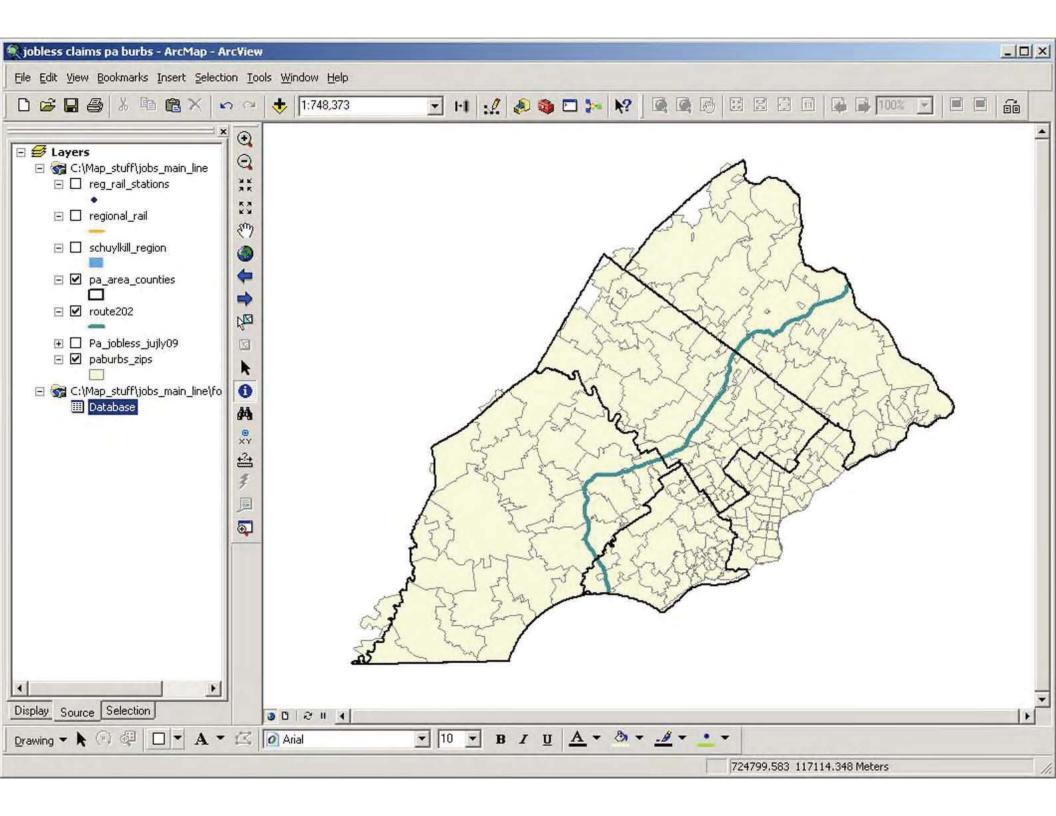

Philadelphia reached its **peak population of 2,071,605** in 1950. Over the next 50 years, the city lost more than a half-million residents, with the population dropping to 1,517,550 in 2000, before reversing that slightly in the 2010 census.

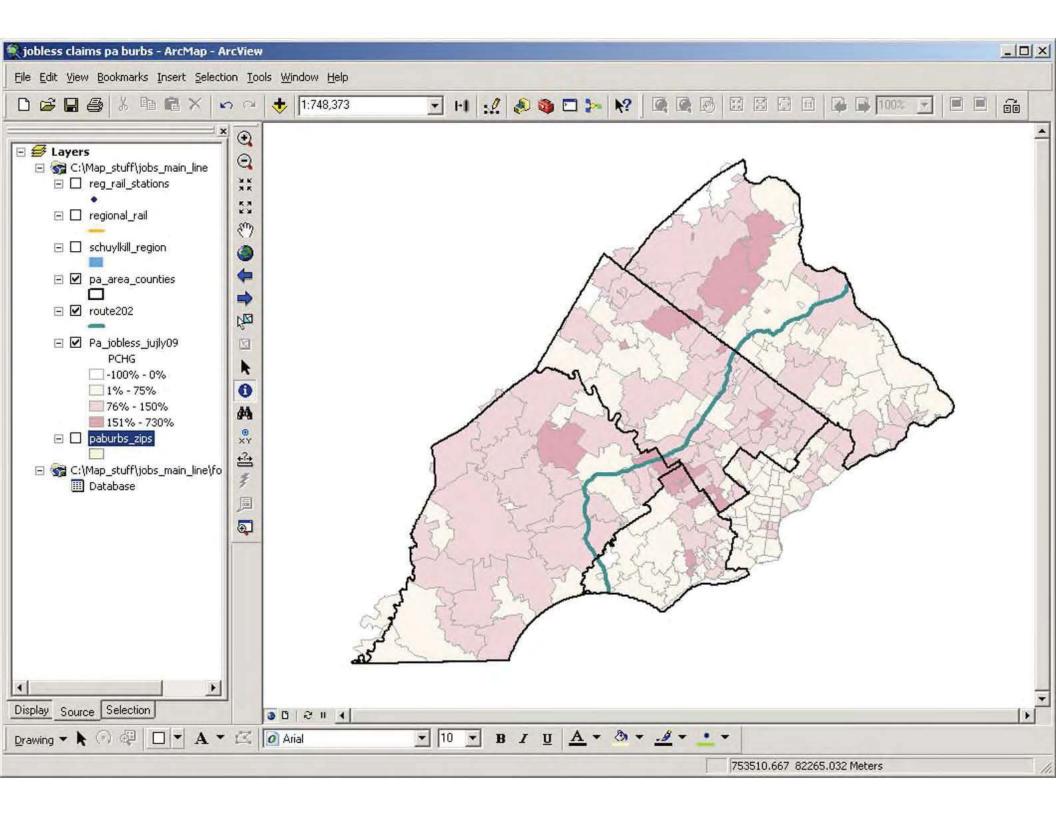

This map shows where the population has grown and fallen within Philadelphia from 1950 to 2010. Each area represents the boundary of a census tract in 1950. Census tracts typically average about 4,000 residents. There are eight tracts, mostly in North Philadelphia, that LEGEND

Job losses trickle up

On the Main Line, a recession that ignores geography.

By Jane M. Von Bergen INQUIRER STAFF WRITER

The Paoli Local, now known prosaically as the R5, passes through some of the region's wealthiest suburbs — the storied Main Line, with train stations in towns whose names resonate with privilege: Merion, Radnor, Wayne, Bryn Mawr, Devon.

Only minutes by foot from the Wayne station is Wayne Presbyterian Church on Lancaster Avenue. And there, on any given Monday night, the Main Line money train is off the track.

Closeted in a secondfloor conference room are former bankers, executives, marketing managers, top sales representatives, and international investment directors — people with Main Line addresses and occupations

LAURENCE KESTERSON / Staff Photographer **Bound for Phila.**, the R5 SEPTA train rolls into Wayne. It cuts through wealthy suburbs where unemployment has spiked.

HAMILTON, N.J. — This township last night became the first municipality in New Jersey or Pennsylvania to prohibit registered sex offenders from moving within 2,500 feet — nearly a half-mile — of any school, playground, park or day-care center.

The ban will make most of Hamilton Township off-limits to registered sex offenders who want to move in. The 42 who already live in the suburban community, just east of Trenton, will not be affected, though they are being monitored, Mayor Glen D. Gilmore said.

The Township Council approved the ordinance, 5-0, after a brief hearing. Gilmore and Council President Wayne P. DeAngelo then signed the ordinance, making it effective immediately.

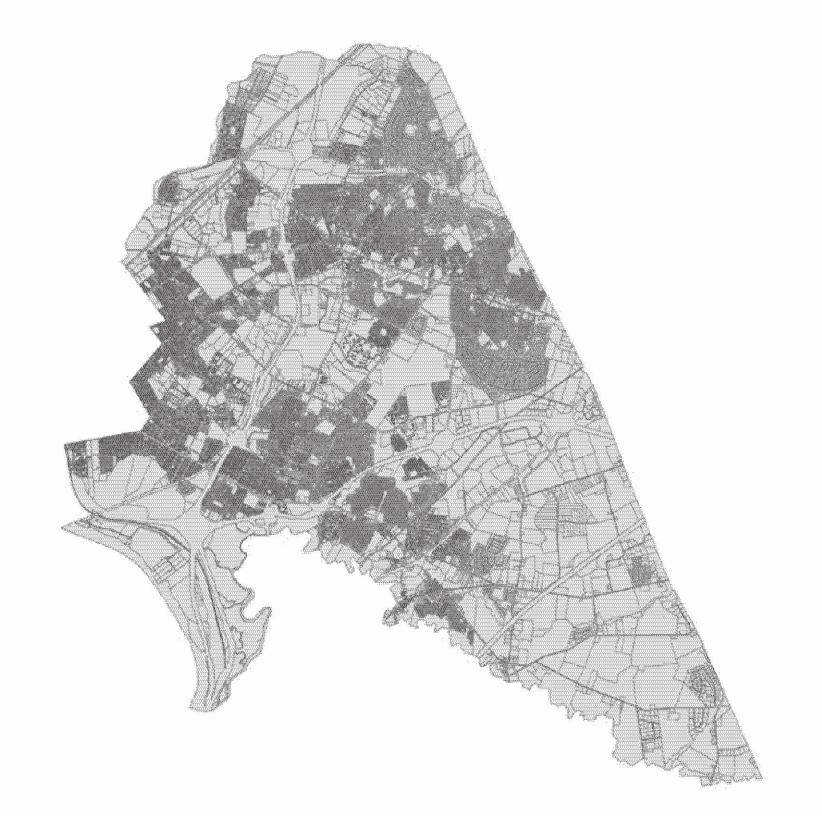

"This will not be a cure-all," Gilmore said, "but I do believe this will add another measure of safety for our community."

Hamilton is where 7-year-old Megan Kanka was raped and murdered by a twice-convicted sex offender in 1994. Her case inspired the creation of sexoffender registries across the country.

The approval of the residency restriction followed a nationwide rush to pass tough new laws concerning pedophiles after sex slayings of children in Florida and elsewhere.

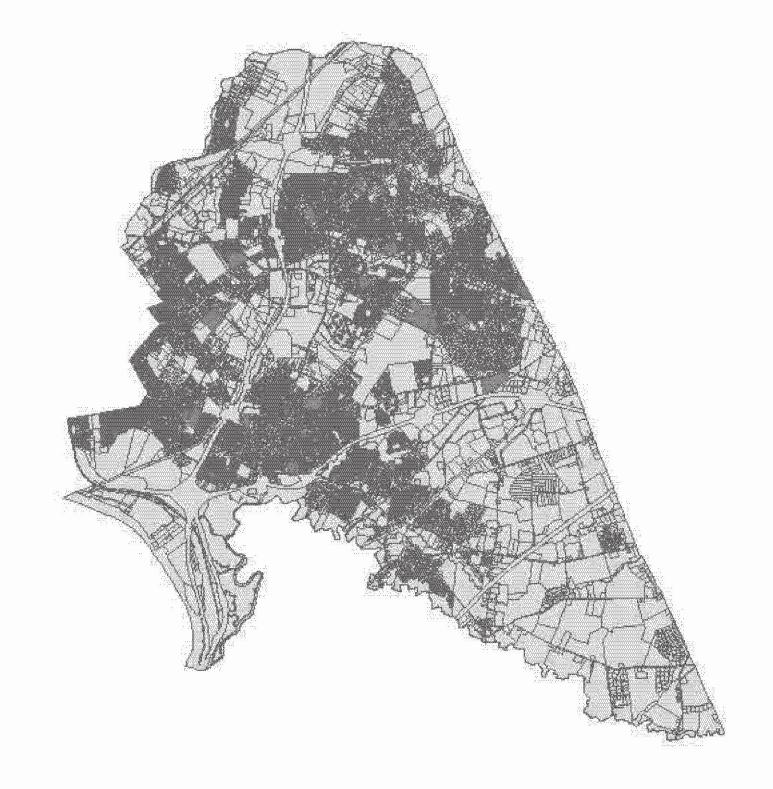

Similar residency restrictions exist or are being considered around the country. This month, Ohio began telling sex offenders to move from their homes if they See **OFFENDERS** on A10 Hamilton, which has nearly 90,000 residents, encompasses 30 schools, 40 parks, and several dozen day-care centers. The township has not precisely mapped the exclusion zones.

Restricting Sex Offenders in Hamilton Township

Hamilton's ban misses some parts of township

Sex offenders could still move next door. residents in the areas discovered.

By Robert Moran

INQUIRER TRENTON BUREAU

HAMILTON, N.J. - The new ban on where registered sex offenders can live applies to most — but not all - of the township here.

And some residents in a pocket not covered by the ordinance raised concerns yesterday about being left out.

"It's kind of distressing," said Tracey Lease, 36, the mother of two girls, ages 1 and 3.

"That strikes me very strangely, that it's not all of the town," said Lease, who lives in To view an the northwestern section of the interactive map Mercer County township.

ONLINE EXTRA

that details the The ordinance, which was areas where adopted Tuesday night and registered sex takes effect after 20 days, prooffenders will be hibits sex offenders from movexcluded, go to ing into any place less than http://go.phily.com/ 2,500 feet - nearly a halfoffender

mile — from a school, playground, park or day-care center. Current residents who are registered offenders are not affected.

An Inquirer analysis of 2000 census data shows that only 3 percent of the township's nearly 90,000 residents do not live in an exclusion zone.

Kathryn Devlin, 63, who is raising two grandchildren, ages 9 and 10, is among the 3 percent, and she would rather be protected by the ordinance. See OFFENDERS on B4

Mayor Glen D. Gilmore appeared slightly surprised when shown a map published in The Inquirer that identified the neighborhood where the residency restriction would not apply. The township has yet to create its own map of the exclusion zones; the mayor said one was in the works.

Gilmore suggested that a park could be established in the neighborhood, but not because it would create an exclusion zone. He said he had already pledged to create "a park within walking distance of every neighborhood." He set no timetable.

Hamilton hopes new park expands sex-offender ban

By Robert Moran

INQUIRER TRENTON BUREAU

TRENTON — The mayor of Hamilton Township said yesterday that a piece of land the township was buying would become a park and thus create a "pedophile-free zone" in a neighborhood not covered by a new ban on where sex offenders can live.

However, Mayor Glen D. Gilmore conceded that until the purchase's completion in September, registered sex offenders could move to the neighborhood without violating the ordinance.

Some residents expressed concern this week after learning their neighborhood was not covered by the ordinance, which prohibits registered sex of-

fenders from moving to within 2,500 feet of a school, park, playground or day-care center.

An Inquirer analysis had determined that 97 percent of the township's nearly 90,000 residents lived in these exclusion zones. But one pocket in the northwest section of the township was not covered, and some residents there said they wanted to be included.

The area includes roughly 50 acres

known as Klockner Woods, and the township has reached an agreement to buy the land from Fieldstone Associates of Doylestown for \$4.1 million in its effort to preserve open space.

"Older residents, when they were kids, it was a place they grew up playing," Gilmore said. "There are wellworn paths. It's obvious kids are back

there playing."

Fieldstone Associates had planned to build houses on the property. To prevent development there, the township initiated condemnation proceedings last year.

butside dency tions. Though some residents have criticized the cost of the deal, and a new appraisal is in the works, Gilmore said he was confident the sale would be completed in September.

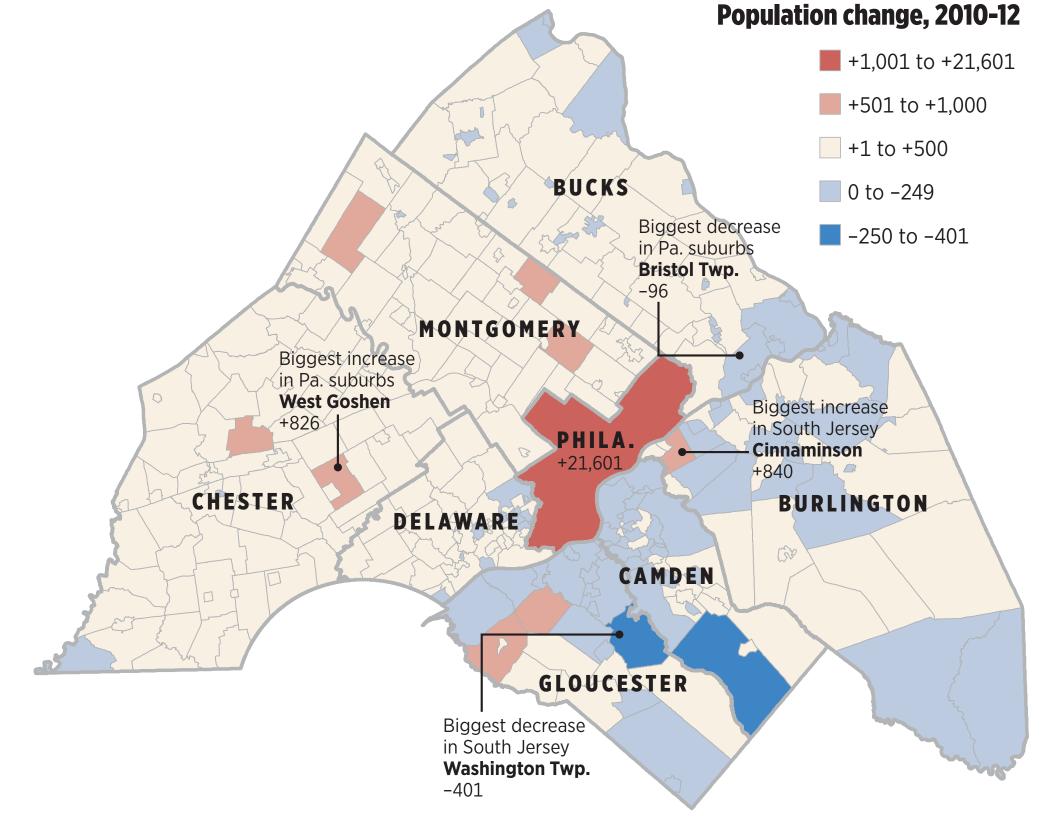

Asked whether registered sex offenders could move into that neighborhood before then, Gilmore said, "I would suspect that that's the case."

He added, "We realize we're in uncharted waters" with the ordinance, which was adopted Tuesday and which takes effect early next month.

Hamilton is the only municipality in New Jersey or Pennsylvania to re-

See **ZONE** on B6

But until the land is bought, officials say, a part of the township could remain outside the residency restrictions.

Thank you.

Leaflet

// Using web maps for better cities

@atogle | aogle@openplans.org

http://atogle.github.io/presentations/20131211-ireg/#0

OpenPlans is a non-profit that builds **open source software** to help make **cities better**.

Pretty much the best thing ever.

Leaflet

Simplicity Performance Usability

An Open-Source JavaScript Library for Mobile-Friendly Interactive Maps

Overview	Features	Tutorials	API	Download	Plugins	Blog	GitHub	😏 Twitter	Forum
----------	----------	-----------	-----	----------	---------	------	--------	-----------	-------

Leaflet Features

Leaflet doesn't try to do everything for everyone. Instead it focuses on making the basic things work perfectly. It should still satisfy the needs of the vast majority of map apps developers while being easily extended by <u>third-party plugins</u>.

Available Map Layers

- · Tile layers
- Markers
- Popups
- Vector layers: polylines, polygons, circles, rectangles, circle markers
- GeoJSON layers
- Image overlays
- WMS layers
- Layer groups

Interaction Features

General

• Drag panning with inertia

On Desktop Browsers

· Scroll wheel zoom

Visual Features

- Zoom animation (for all layers, including tile layers, markers and vector layers)
- Panning animation
- · Smooth continuous zoom on modern mobile devices
- Tile and popup fade animation
- Very nice default design for markers, popups and other map controls
- · Retina resolution support for tile layers and markers

Customization Features

- · Pure CSS3 popups and controls for easy restyling
- · Image- and HTML-based markers
- A simple interface for implementing custom map layers
- The same for custom map controls
- Custom map projections (with EPSG:4326, EPSG:3857 and EPSG:3395 out of the box)
- Demontal OOD facilities for automation availation alasses

Map Controls

- Zoom buttons
- Attribution
- · Layer switcher
- Scale

Browser Support

On Desktop

- Chrome
- Firefox
- Safari 5+
- Opera 12+
- IE 7-11

On Mobile

- Safari for iOS 3–7+
- Android browser
 2 2+, 3 1+, 4+

Hey, Urban Geeks, Planners, Civic Hackers, and Community Organizers! Get ready for...

To hear about future PlanningCamps, follow <u>@PlanningCamp</u> on Twitter.

Past Events: Philly » February 1st, 2014 Bay Area » October 12th, 2013 NYC » September 21st, 2013

An <u>unconference</u> exploring urban planning, technology, and social change.

PlanningCamps in NYC, Oakland and Philly brought together over 300 planners, organizers, civic technologists and government employees for over 90 sessions. Thanks to everyone who brought enthusiasm and community spirit to make the unconferences possible.

We were energized by all three events, and learned a lot that we are using in our ongoing development of <u>Plan In A Box</u>. Try it today to put timely, engaging information about your projects online in a matter of minutes.

Our small team is head down on software development right now, so we've decided to not to proceed with any additional PlanningCamps this year. We'll be at <u>TransportationCamp</u> <u>New England</u> in Cambridge in early April, and at the <u>National</u> <u>APA conference</u> in Atlanta in late April. If you're at either of those events, we hope to see you.

Stay connected on #plancamp

We're using <u>#plancamp</u> on Twitter for event news and updates.

#plancamp

Description

The Trinity Alps Wilderness is a 525,627-acre (2,130 km2) designated wilderness located in northern California, roughly between Eureka and Redding. It is jointly administered by Shasta-Trinity, Klamath, and Six Rivers National Forests. About 4,623 acres (18.71 km2) are administered by the Bureau of Land Management. The wilderness is located in the Salmon and Scott Mountains, subranges of the Klamath Mountains region. The high, granitic and ultramafic peaks of the eastern

Mapping 1.1M photos taken by the ISS.

The International Space Station (ISS) is a habitable artificial satellite in low Earth orbit. It can often be seen at the appropriate time with the naked eye from Earth. The ISS serves as a microgravity and space environment research laboratory in which crew members conduct experiments in biology, human biology, physics, astronomy, meteorology and other fields. The station has been continuously occupied for 12 years and 167 days, having exceeded the previous record of almost 10 years (or 3,634 days) held by Mir, in 2010. During all this time, more than a Million of photos of Earth have been taken, and that is what we wanted to show you on the map below.

Exploring the differences in dynamic data through time

We often find ourselves exploring what interesting things can be found in data that changes through time. In recent blog posts about the Mobile World Congress (MWC), we have published a couple interesting experiments with temporal data. In the first, we showed how CartoDB could be used to map traffic in Barcelona.

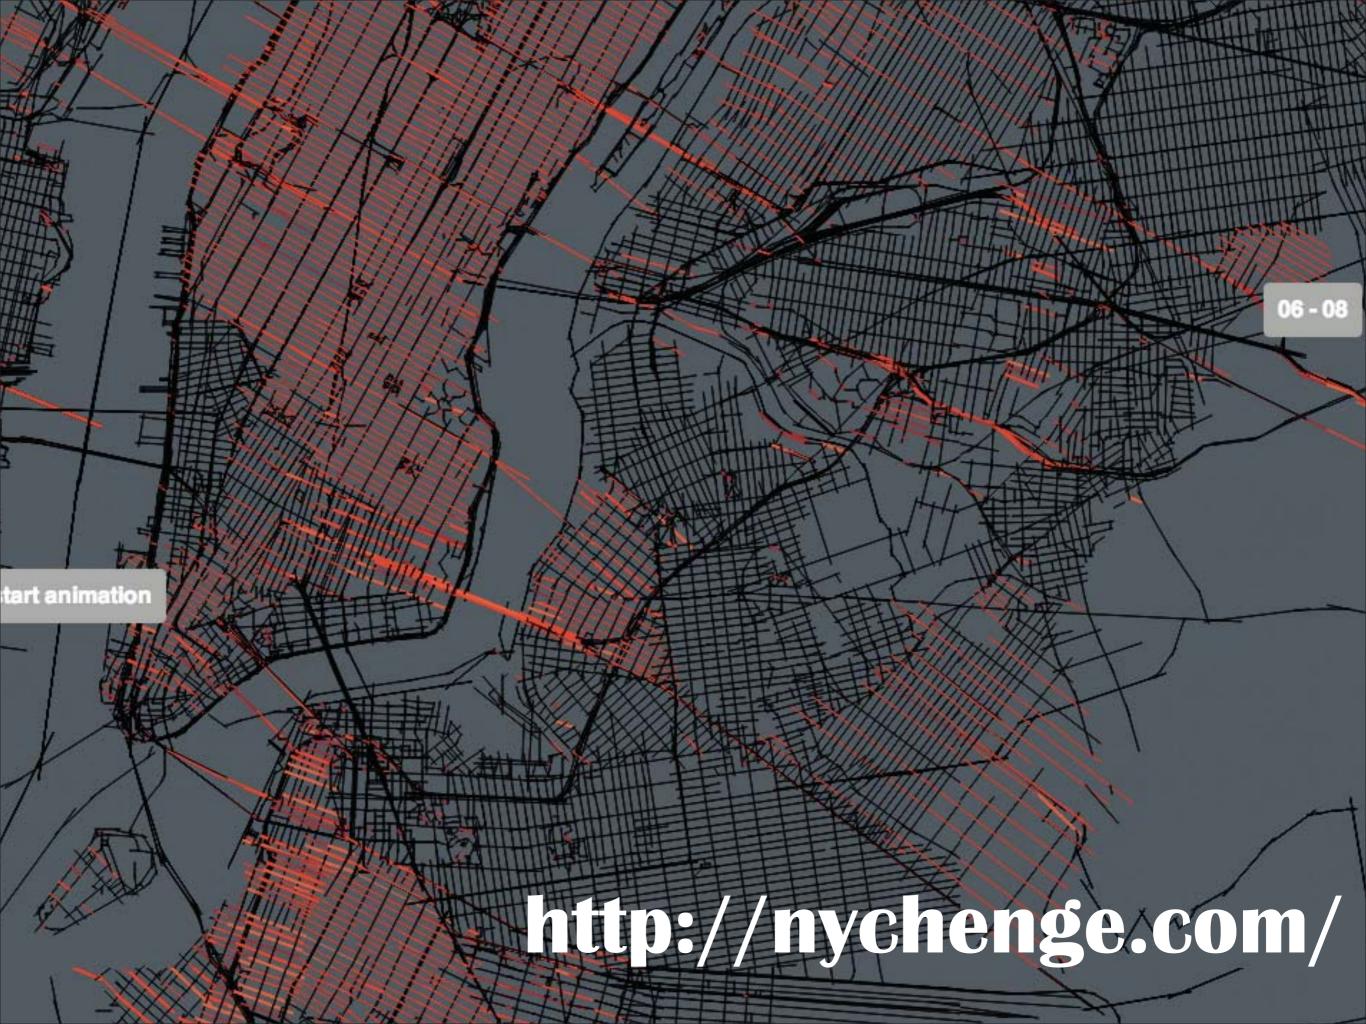

The map was built to automatically update every 15 minutes through the day. In the second map, we show a fun visualization of credit card purchases in Barcelona during MWC compared to
