THE MPMS IQ APPLICATION IS A WEB-BASED GIS MAPPING APPLICATION FOR HIGHWAY AND BRIDGE PROJECTS ON THE COMMONWEALTH'S TWELVE YEAR TRANSPORTATION PROGRAM AND REGIONAL TRANSPORTATION IMPROVEMENT PLANS (TIPS). THIS APPLICATION ALLOWS USERS TO **MAP** AND OBTAIN **INFORMATION** FOR HIGHWAY, BRIDGE, AVIATION AND TRANSIT PROJECTS

AVAILABLE AS BOTH AN INTERNET AND INTRANET VERSION

PennDOT Next Generation

What are the Components?

Next Generation is the combination of five distinct initiatives:

-  **PennDOT Next Generation Projects**
Engage PennDOT management and staff to refresh and advance business practices and technology.
-  **Mapping the Future**
Coordination among PennDOT, the Turnpike Commission (PTC), the Department of Conservation and Natural Resource (DCNR), and other agencies to save resources and avoid duplicating efforts.
-  **Modernization Initiatives**
Delivering on the Transportation Funding Advisory Commission's and department's modernization recommendations.
-  **State Transportation Innovation Council**
A public/private/institutional approach to adopt and cultivate innovative technologies and techniques to expedite project delivery.
-  **IdeaLink**
Bottom-up approach that empowers all employees to submit innovative ideas to improve workplace safety and enhance operations.

QUESTIONS?

The GIS Professional: An Exam-Based Certification for the GIS Workforce

Jeremy Mennis, Ph.D., GISP

Department of Geography and Urban
Studies, Temple University

About Me

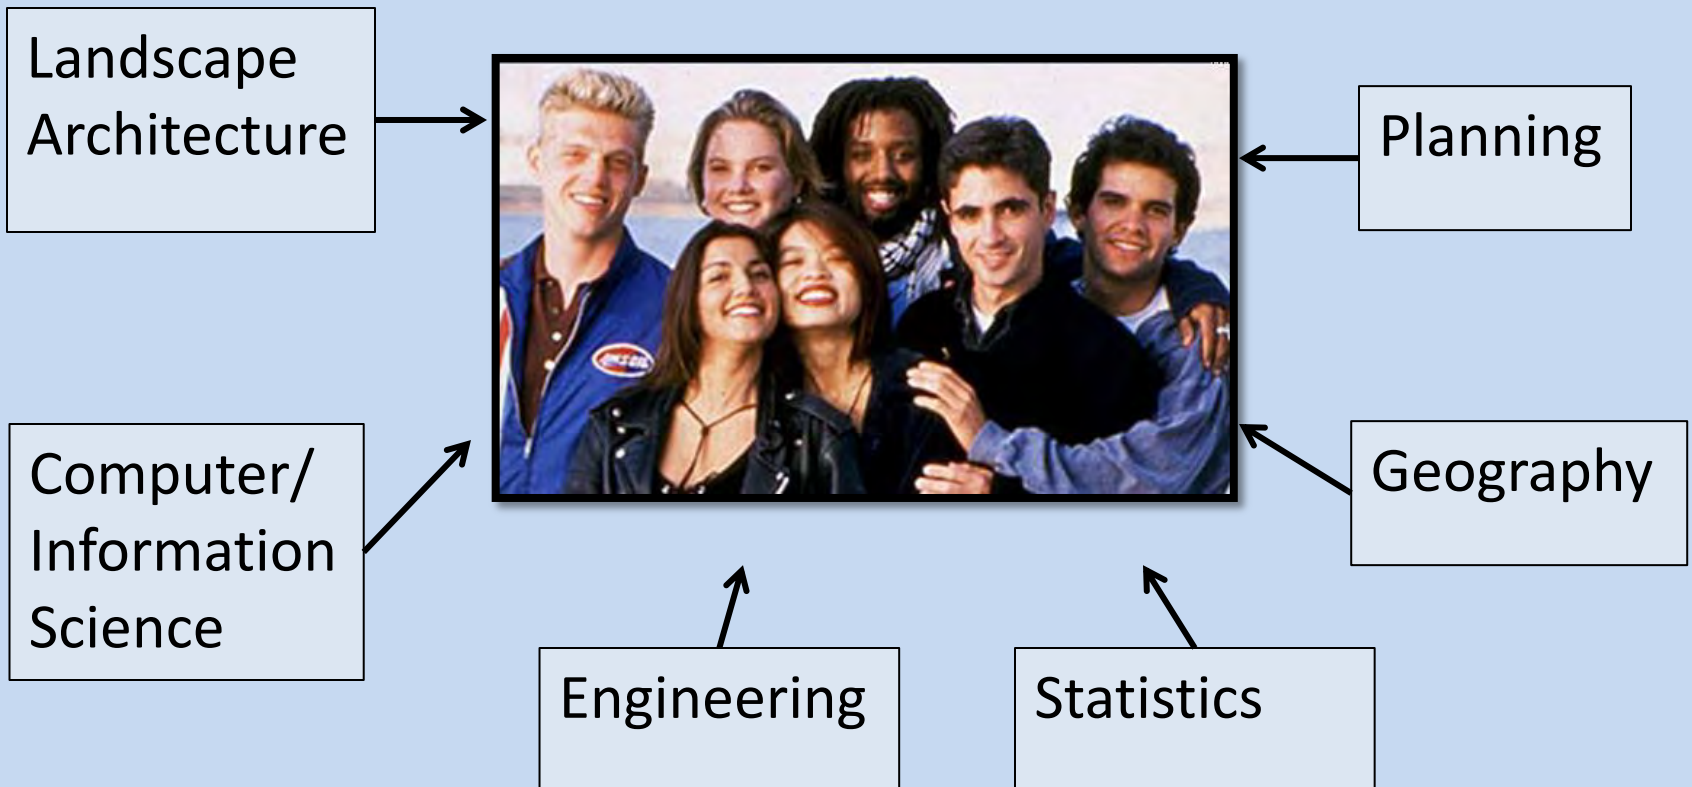

- Teaching GIS since 1996
- Faculty Member at Temple University since 2004
- Chair, Geographic Information Systems and Science Specialty Group, AAG (2008-9)
- Board of Directors, UCGIS (2008-12)
- Board of Directors, GISCI (2010-14)
- Advisory Board, UCGIS BoK (2006, 2014)
- Panelist, DoL/GeoTECH GTCM (2010)

This presentation reflects my own personal perspective.

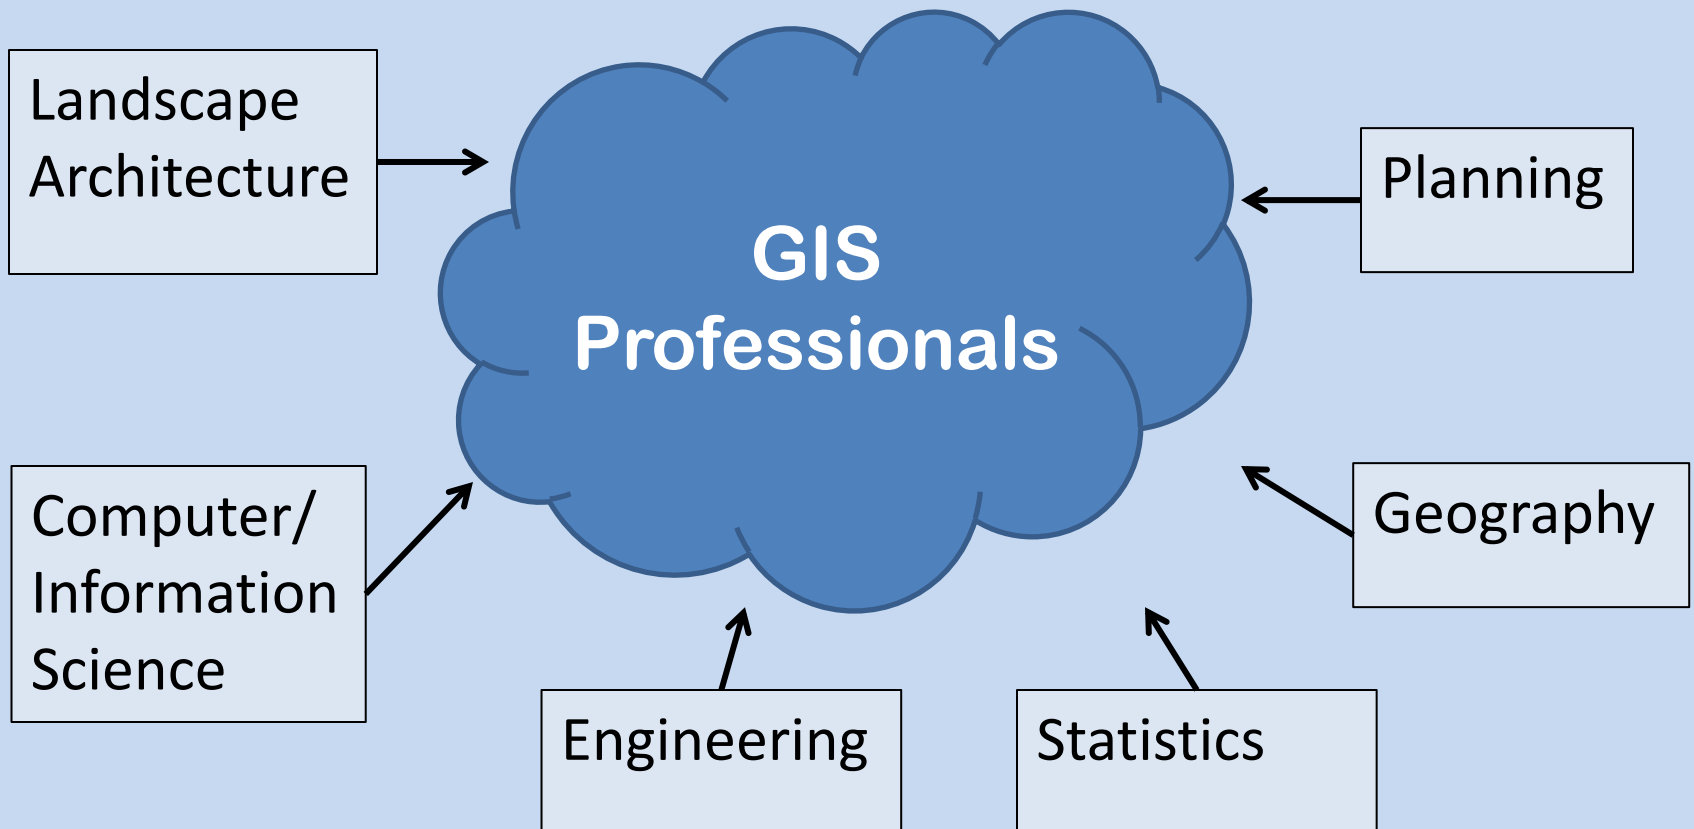

This is the true story... of seven strangers...
picked to work together... to find out what
happens... when people stop being polite... and
start getting real...*The Real World*.

This is the true story... of seven strangers...
picked work together... to find out what
happens... when people stop being polite... and
start getting real... *The Real World*.

This is the true story... of seven strangers...
picked work together... to find out what
happens... when people stop being polite... and
start getting real... *The Real World.*

Let's get right to the point...

- Yes, there is a coherent GIS profession.
- But it needs to be cultivated, through certification.
- Now is the time for an exam-based certification.
- This will benefit all of us!

What is the GIS profession?

- The **academics**, **workforce**, and **industry** centered around geospatial data, analysis, and technology
- GIS, remote sensing and photogrammetry, GPS, geodesy, cartography and visualization, surveying, spatial analytics, spatial database management,

What is certification? (as opposed to...)

Certification: Recognition by a third party of a level of expertise in the profession.

Certificate: Recognizes completion of an academic program.

Licensure: A license to practice a profession, often regulated by states and indoctrinated in legislation.

Accreditation: Granted to an institution or program of study in accordance with pre-established criteria.

Why certification?

- To establish GIS as a profession
- To attain recognition by allied professions and colleagues
- To encourage long-term professional development
- To ensure ethical behavior
- To assist employers assess and hire GIS professionals
- To ensure a core competency of knowledge
- To strengthen the GIS industry.

The GIS Profession is growing rapidly

According to a new report on the GIS market (Geographic Information Systems (GIS): A Global Outlook released January 2012) from Global Industry Analysts, Inc (GIA), the GIS industry is expected to growth to a worldwide to US\$10.6 Billion by 2015.

[Morais, 2012 \(http://www.gislounge.com/gis-industry-trends/\)](http://www.gislounge.com/gis-industry-trends/)

CNN says GIS Specialist is a top 100 job

The screenshot shows the CNN Money website's 'Best Jobs in America' page for 2013. The main heading is '85. GIS Specialist'. Below this, statistics are provided: Median pay: \$53,400; Top pay: \$74,200; 10-year job growth: 22.1%; Total jobs*: 544,400. Quality of life ratings are also shown: Personal satisfaction: C, Benefit to society: B, Flexibility: B, Low stress: A. The page includes navigation buttons for 'BACK' and 'NEXT', a 'Recommend' button with 54 shares, and social media sharing options. A sidebar on the right lists 'More Best Jobs' including '12 Top-paying jobs', '10 Fastest-growing jobs', and 'Top 100: Full list'. Below the sidebar, there is an advertisement for 'BYOD shouldn't stand for "Broadcast Your Organization's D"' and a section for 'GIS Specialist Jobs' with several job listings from IBM, Schneider Electric, Chevron Corporation, and AECOM. The page footer contains publication information and notes about the data sources.

High Growth Industry Profile - Geospatial Technology

Industry Snapshots

- Revenues from the public sector lead geospatial market growth and account for more than one-third of total revenue. While federal governments were among the early adopters of GIS technology, recent trends toward devolving more responsibilities to states and localities have spurred those entities to become important consumers of GIS. While industries in the regulated sector, such as utilities, telecommunications, transportation and education, are the largest consumers of GIS/geospatial solutions, private-sector growth remains dependent upon business adoption based on the added-value these technologies provide. (Daratech, GIS/Geospatial Markets and Opportunities)
- Geospatial products and specialists are expected to play a large role in homeland security activities. Information gathering needs to protect critical infrastructure have resulted in an enormous increase in the demand for such skills and jobs. (Lorraine Castro, NIMA Human Resources Department)
- Because the uses for geospatial technology are so widespread and diverse, the market is growing at an annual rate of almost 35 percent, with the commercial subsection of the market expanding at the rate of 100 percent each year. (Geospatial Information & Technology Association)

Workforce Issues

Skills, Competencies, and Training

- Emerging occupations within the geospatial technology industry require developing competency models for new applications of geospatial technology. Aligning training in geospatial applications with industry developed competency models is essential to developing the necessary pipeline of skilled workers. This approach is necessary for preparing entry-level workers with basic skills to ensure career success.
- Increasing demand for readily available, consistent, accurate, complete and current geographic information and the widespread availability and use of advanced technologies offer great job opportunities for people with many different talents and educational backgrounds. (U.S. Geological Survey and U.S. Bureau of Labor Statistics)

Image and Outreach to the Public

- The public is not aware of the necessary skill sets and competencies needed to prepare for the diverse career opportunities available within the geospatial technology industry. Reaching an industry-wide consensus that defines "geospatial," its technologies and its applications is of utmost importance. There is also a need for better industry promotion by creating a national image campaign that raises awareness about the industry and dispels stereotypes and misperceptions.

Pipeline

- In order to meet industry growth requirements employers need to examine alternatives to the traditional pipeline. These alternatives include recruiting young workers through apprenticeship and high school/college dual-enrollment-dual-credit agreements as well as tapping nontraditional labor pools to diversify the workforce.

Skill Sets

(Source: ASPRS: *The Imaging and Geospatial Information Society*)

- College preparatory courses that emphasize the sciences are suggested for individuals interested in pursuing careers in photogrammetry, remote sensing and geographic information systems (GIS).
- For individuals who do not wish to pursue an advanced degree, there is a substantial demand for technicians in geospatial information technology. Many 2-year academic and technical institutions offer education and training in photogrammetry, remote

What does it mean for us?

If we are to build a healthy GIS **educational infrastructure, workforce, and industry**, we have to recognize the fundamental **job tasks, competencies, and knowledge areas** for what it is WE do...

What does it mean for us?

If we are to build a healthy GIS **educational infrastructure, workforce, and industry**, we have to recognize the fundamental **job tasks, competencies, and knowledge areas** for what it is WE do...

An exam-based certification is the natural framework for establishing this criteria. Because doing nothing is not a good option.

What does it mean for us?

If we are to build a healthy GIS **educational infrastructure, workforce, and industry**, we have to recognize the fundamental **job tasks, competencies, and knowledge areas** for what it is WE do...

An exam-based certification is the natural framework for establishing this criteria. Because doing nothing is not a good option.

But who decides what is WE do....(and who are WE, exactly)?

WE are the GIS Workforce

GIS Certification Institute

- Founded 2004 by URISA
- Non-profit organization
- Board representatives from 6 member organizations
- Awards individuals GISP certification

GIS Professional (GISP) Certification

- Self-documented and peer reviewed portfolio
 - **Education:** University courses, degrees, workshops
 - **Experience:** At least 4 years equivalent full time
 - **Contributions:** Publications, organizations
 - **Code of Ethics:** Must be signed
- GISPs must recertify every 5 years
- Currently approximately **7000 GISPs**
- GISCI is developing an **exam** component, with rollout anticipated Fall 2015

Geographic Information Science & Technology Body of Knowledge

Edited by David DiBiase, Michael DeMers, Ann Johnson, Karen Kemp, Ann Taylor Luck, Brandon Piewe, and Elizabeth Wentz

UNIVERSITY CONSORTIUM FOR GEOGRAPHIC INFORMATION SCIENCE

Analytical Methods

AM1 Academic and analytical origins

- 1-1 Academic foundations
- 1-2 Analytical approaches

AM2 Query operations and query languages

- 2-1 Set theory
- 2-2 Structured Query Language (SQL) and attribute queries
- 2-3 Spatial queries

AM3 Geometric measures

- 3-1 Distances and lengths
- 3-2 Direction
- 3-3 Shape
- 3-4 Area
- 3-5 Proximity and distance decay
- 3-6 Adjacency and connectivity

AM4 Basic analytical operations

- 4-1 Buffers
- 4-2 Overlay
- 4-3 Neighborhoods
- 4-4 Map algebra

AM5 Basic analytical methods

- 5-1 Point pattern analysis
- 5-2 Kernel and density estimation
- 5-3 Spatial cluster analysis
- 5-4 Spatial interaction
- 5-5 Analyzing multidimensional attributes
- 5-6 Cartographic modeling
- 5-7 Multi-criteria evaluation
- 5-8 Spatial process models

AM6 Analysis of surfaces

- 6-1 Calculating surface derivatives
- 6-2 Interpolation of surfaces
- 6-3 Surface features
- 6-4 Inter-visibility
- 6-5 Friction surfaces

Conceptual Foundations

CF1 Philosophical foundations

- 1-1 Metaphysics and ontology
- 1-2 Epistemology
- 1-3 Philosophical perspectives

CF2 Cognitive and social foundations

- 2-1 Perception and cognition of geographic phenomena
- 2-2 From concepts to data
- 2-3 Geography as a foundation for GIS
- 2-4 Place and landscape
- 2-5 Commonsense geographies
- 2-6 Cultural influences
- 2-7 Political influences

CF3 Domains of geographic information

- 3-1 Space
- 3-2 Time
- 3-3 Relationships between space and time
- 3-4 Properties

AM7 Spatial statistics

- 7-1 Geographical methods
- 7-2 Stochastic processes
- 7-3 The spatial weights matrix
- 7-4 Global measures of spatial association
- 7-5 Local measures of spatial association
- 7-6 Outliers
- 7-7 Bayesian methods

AM8 Geostatistics

- 8-1 Spatial sampling for statistical analysis
- 8-2 Principles of semi-variogram construction
- 8-3 Semi-variogram modeling
- 8-4 Principles of kriging
- 8-5 Kriging variants

AM9 Spatial regression and econometrics

- 9-1 Principles of spatial econometrics
- 9-2 Spatial autoregressive models
- 9-3 Spatial filtering
- 9-4 Spatial expansion and Geographically Weighted Regression (GWR)

AM10 Data Mining

- 10-1 Problems of large spatial databases
- 10-2 Data mining approaches
- 10-3 Knowledge discovery
- 10-4 Pattern recognition and matching

AM11 Network analysis

- 11-1 Networks defined
- 11-2 Graph theoretic (descriptive) measures
- 11-3 Least-cost (shortest) path
- 11-4 Flow modeling
- 11-5 The Classic Transportation Problem
- 11-6 Other classic network problems
- 11-7 Accessibility Modeling

AM12 Optimization and location-allocation modeling

- 12-1 Operations research modeling and location modeling principles
- 12-2 Linear programming
- 12-3 Integer programming
- 12-4 Location-allocation modeling and location problems

CF4 Elements of geographic information

- 4-1 Discrete entities
- 4-2 Events and processes
- 4-3 Events in space and time
- 4-4 Integrated models

CF5 Relationships

- 5-1 Categories
- 5-2 Merology-structural relationships
- 5-3 Genealogical relationships: lineage, inheritance
- 5-4 Topological relationships
- 5-5 Metrical relationships: distance and direction
- 5-6 Spatial distribution
- 5-7 Region
- 5-8 Spatial integration

CF6 Imperfections in geographic information

- 6-1 Vagueness
- 6-2 Mathematical models of vagueness: Fuzzy sets and rough sets
- 6-3 Error-based uncertainty
- 6-4 Mathematical models of uncertainty: Probability and statistics

Cartography and Visualization

CV1 History and trends

- 1-1 History of cartography
- 1-2 Technological transformations

CV2 Data considerations

- 2-1 Source materials for mapping
- 2-2 Data abstraction-classification, selection, and generalization
- 2-3 Projections as a map design issue

CV3 Principles of map design

- 3-1 Map design fundamentals
- 3-2 Basic concepts of symbolization
- 3-3 Color for cartography and visualization
- 3-4 Typography for cartography and visualization

CV4 Graphic representation techniques

- 4-1 Basic thematic mapping methods
- 4-2 Multivariate displays
- 4-3 Dynamic and interactive displays
- 4-4 Representing terrain
- 4-5 Web mapping and visualizations
- 4-6 Virtual and immersive environments
- 4-7 Spatialization
- 4-8 Visualization of temporal geographic data
- 4-9 Visualization of uncertainty

CV5 Map production

- 5-1 Computational issues
- 5-2 Map production
- 5-3 Map reproduction

CV6 Map use and evaluation

- 6-1 The power of maps
- 6-2 Map reading
- 6-3 Map interpretation
- 6-4 Map analysis
- 6-5 Evaluation and testing
- 6-6 Impact of accuracy

Design Aspects

DA1 The scope of GIS&T system design

- 1-1 Using models to represent information and processes
- 1-2 Components of models: data, structures, procedures
- 1-3 The scope of GIS&T applications
- 1-4 The scope of GIS&T design
- 1-5 The process of GIS&T design

DA2 Project definition

- 2-1 Problem definition
- 2-2 Planning for design
- 2-3 Application/user assessment
- 2-4 Requirements analysis
- 2-5 Social, political, and cultural issues

DA3 Resource planning

- 3-1 Feasibility analysis
- 3-2 Software systems
- 3-3 Data costs
- 3-4 Labor and management
- 3-5 Capital, facilities and equipment
- 3-6 Funding

DA4 Database design

- 4-1 Modeling tools
- 4-2 Conceptual models
- 4-3 Logical models
- 4-4 Physical models

DA5 Analysis design

- 5-1 Recognizing analytical components
- 5-2 Identifying and designing analytical procedures
- 5-3 Coupling scientific models with GIS
- 5-4 Formalizing a procedure design

DA6 Application design

- 6-1 Workflow analysis and design
- 6-2 User interfaces
- 6-3 Development environments for geospatial applications

DA7 System implementation

- 7-1 Implementation planning
- 7-2 Implementation tasks
- 7-3 System testing
- 7-4 System deployment

Data Modeling

DM1 Basic storage and retrieval structures

- 1-1 Basic data structures
- 1-2 Data retrieval strategies

DM2 Database management systems

- 2-1 Coevolution of DBMS and GIS
- 2-2 Relational DBMS
- 2-3 Object-oriented DBMS
- 2-4 Extensions of the relational model

DM3 Tessellation data models

- 3-1 Grid representations
- 3-2 The raster model
- 3-3 Grid compression methods
- 3-4 The hexagonal model
- 3-5 The Triangulated Irregular Network (TIN) model
- 3-6 Resolution
- 3-7 Hierarchical data models

DM4 Vector and object data models

- 4-1 Geometric primitives
- 4-2 The spaghetti model
- 4-3 The topological model
- 4-4 Classic vector data models
- 4-5 The network model
- 4-6 Linear referencing
- 4-7 Object-based spatial databases

DM5 Modeling 3D, uncertain, and temporal phenomena

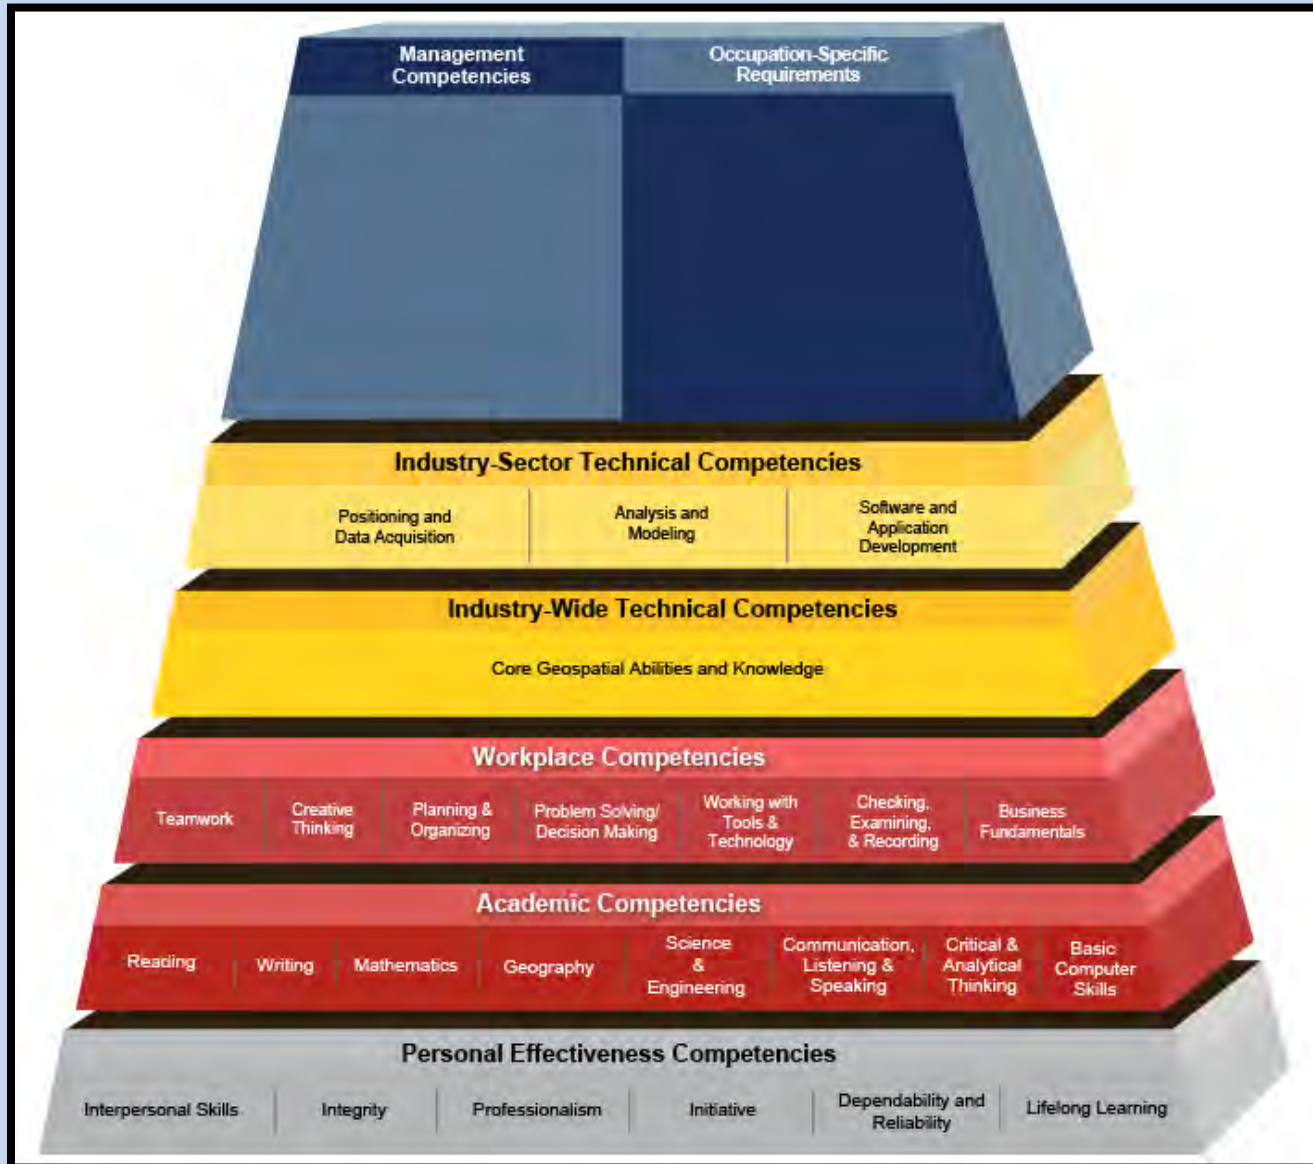

- 5-1 Spatio-temporal GIS
- 5-2 Modeling uncertainty
- 5-3 Modeling three-dimensional entities

UCGIS Body of
Knowledge
(2006)

DACUM Chart: GIS Specialist (GeoTECH)

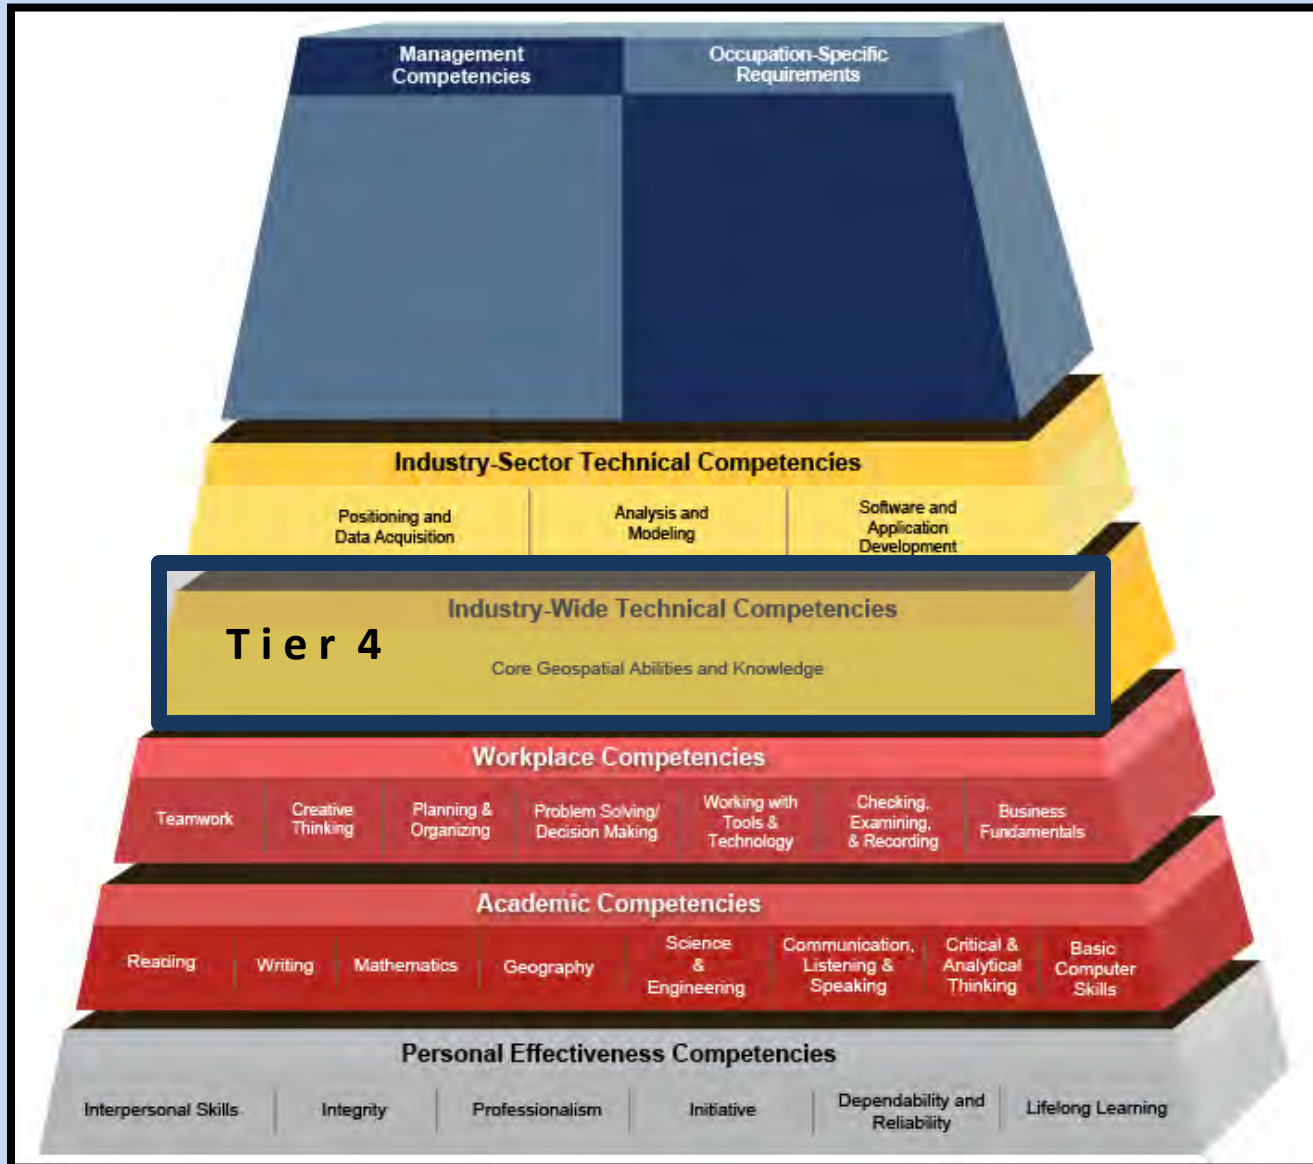

Duties	Tasks													
Plan Projects (E)	A1 Clarify audience/ scope of work	A2 Prepare project feasibility studies	A3 Coordinate resources (budget, time, people)		A4 Develop & create data structure (naming, conventions)		A5 Create spatial database (SQL, Geodatabase)		A6 Define data attributes	A7 Evaluate project progress				
Acquire Data (E)	B1 Coordinate acquisition logistics (permissions, legal, GPS mission planning)		B2 Obtain outside data (legal docs)	B3 Connect to real time data sources	B4 Upload project parameters	B5 Create data dictionary	B6 Assemble fieldwork equipment	B7 Calibrate control network	B8 Collect GPS observations	B9 Record field notes (photo, site surveys, inspections, samples)		B10 Scan documents	B11 Export raw data	
Process Data (E)	C1 Validate data integrity (sampling, projections)	C2 Post process data (LIDAR field notes, GPS, Imagery)		C3 Convert datums and projections	C4 Georeference information (PDF, video, images)		C5 Digitize data	C6 COGO data	C7 Geocode data	C8 Populate data attributes	C9 Create map layer	C10 Create metadata	C11 Create base map	C12 Create raster mosaic
Process Data con't		C13 Create cache	C14 Backup & archive data											
Analyze Data (A/E)	D1 Edit/update data attributes (data attribute tables)		D2 Edit/update geometry	D3 Join data (SQL)	D4 Relate Data	D5 Build network data set	D6 Build models (model builder, add-ins automate)		D7 Execute models	D8 Write programming scripts (python automate, C#)		D9 Execute programming scripts	D10 Create query statements (SQL, joins, relates)	
Analyze Data con't		D11 Conduct surface analysis (slope, contour, TINs)		D12 Conduct cost analysis	D13 Conduct network analysis	D14 Conduct raster analysis	D15 Conduct statistical analysis	D16 Conduct spatial analysis						
Administer Server (A)	E1 Configure servers	E2 Configure user permissions	E3 Develop GIS website	E4 Publish web services	E5 Maintain GIS website	E6 Troubleshoot server	E7 Update server							
Produce Deliverables (E)	F1 Export final data (DTMs, raster vector, tables, CAD, elevation data)		F2 Create static maps (PDF, paper, e.g. density map)		F3 Create dynamic maps (e.g. web-map)	F4 Create map books	F5 Compose reports (statistical, charts, graphs)		F6 Write proposals (grants)	F7 Create web services (WMS, WFS, ARC server)	F8 Create navigational maps (GPS tours)	F9 Create progress reports	F10 Create presentations	F11 Deliver presentations
Support Users (A)	G1 Create Help Files (answer FAQs)	G2 Develop instructional materials	G3 Conduct training (meetings, job shadow)	G4 Provide technical support (troubleshoot)	G5 Solicit user feedback	G6 Closeout project								
Professional Development (A/E)	H1 Attend employer mandated training	H2 Obtain certifications and licensure	H3 Maintain credentials	H4 Attend webinars and on-line classes	H5 Attend conferences and seminars	H6 Present at conferences and seminars	H7 Subscribe to trade publications	H8 Participate in user groups and committees	H9 Expand professional network	H10 Participate in on-the-job training (job shadow)		H11 Explore new technologies	H12 Obtain advanced degrees	H13 Promote GIS

Tasks

- Produce data layers, maps, tables, or reports, using spatial analysis procedures or Geographic Information Systems (GIS) technology, equipment, or systems.
- Coordinate the development or administration of Geographic Information Systems (GIS) projects, including the development of technical priorities, client reporting and interface, or coordination and review of schedules and budgets.
- Provide technical expertise in Geographic Information Systems (GIS) technology to clients or users.
- Create, analyze, report, convert, or transfer data, using specialized applications program software.
- Design, program, or model Geographic Information Systems (GIS) applications or procedures.
- Provide technical support for computer-based Geographic Information Systems (GIS) mapping software.
- Perform computer programming, data analysis, or software development for Geographic Information Systems (GIS) applications, including the maintenance of existing systems or research and development for future enhancements.
- Lead, train, or supervise technicians or related staff in the conduct of Geographic Information Systems (GIS) analytical procedures.
- Collect, compile, or integrate Geographic Information Systems (GIS) data, such as remote sensing or cartographic data for inclusion in map manuscripts.
- Meet with clients to discuss topics such as technical specifications, customized solutions, or operational problems.

How is the exam being developed?

Project Manager

Rebecca Somers (Somers-St. Claire GIS Consulting)

Exam Development Contractor

HumRRO (Human Resources Research Organization)

In consultation with

GISPs and individuals from the GISCI member organizations.

How is the exam being developed?

Based on the (GTCM) Tier 4. ***What are the key competencies that every GIS Professional should know?***

The key steps in GISCI's exam development process are:

1. Job Analysis

GIS Professional subject matter experts (SMEs)

2. Exam Blueprint Development

3. Item Writing

4. Exam Construction

5. Pilot Exam

6. Standard Setting

Challenges

- A coherent plan for **certification and accreditation...**

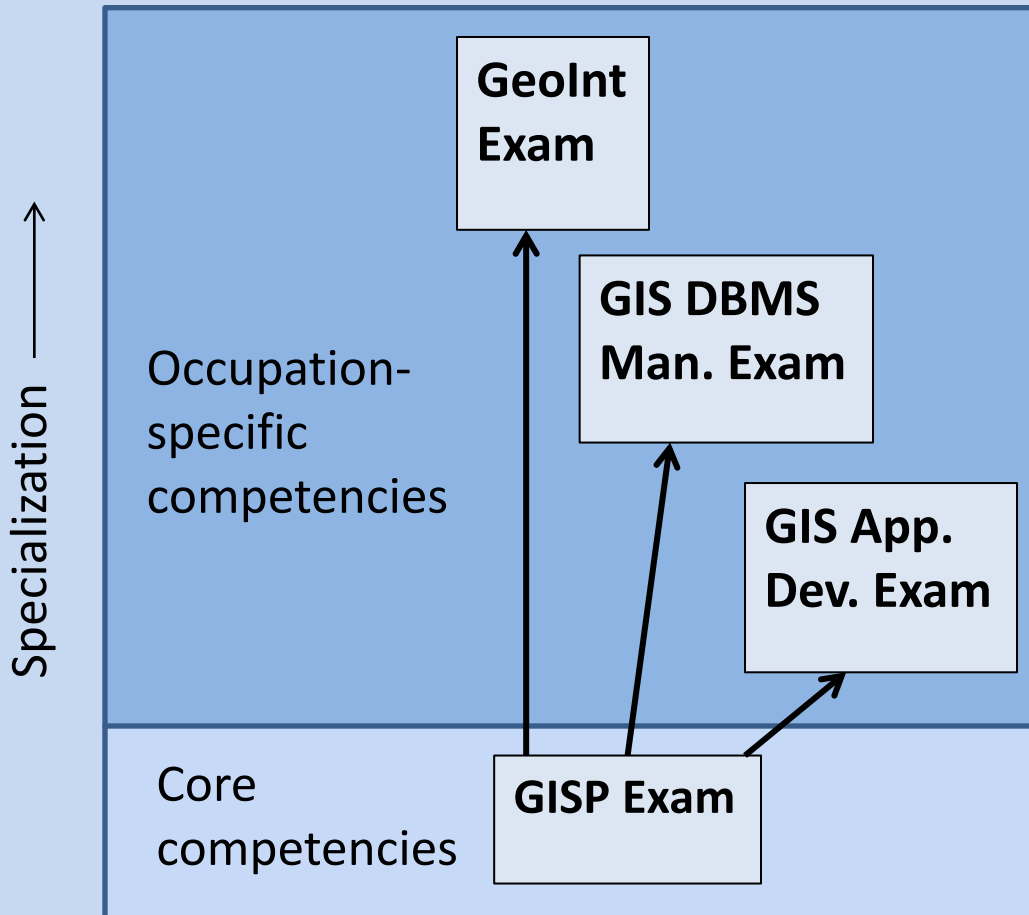

Challenges

- A coherent plan for **certification and accreditation...**
- Developing **paths for specialization** and experience...

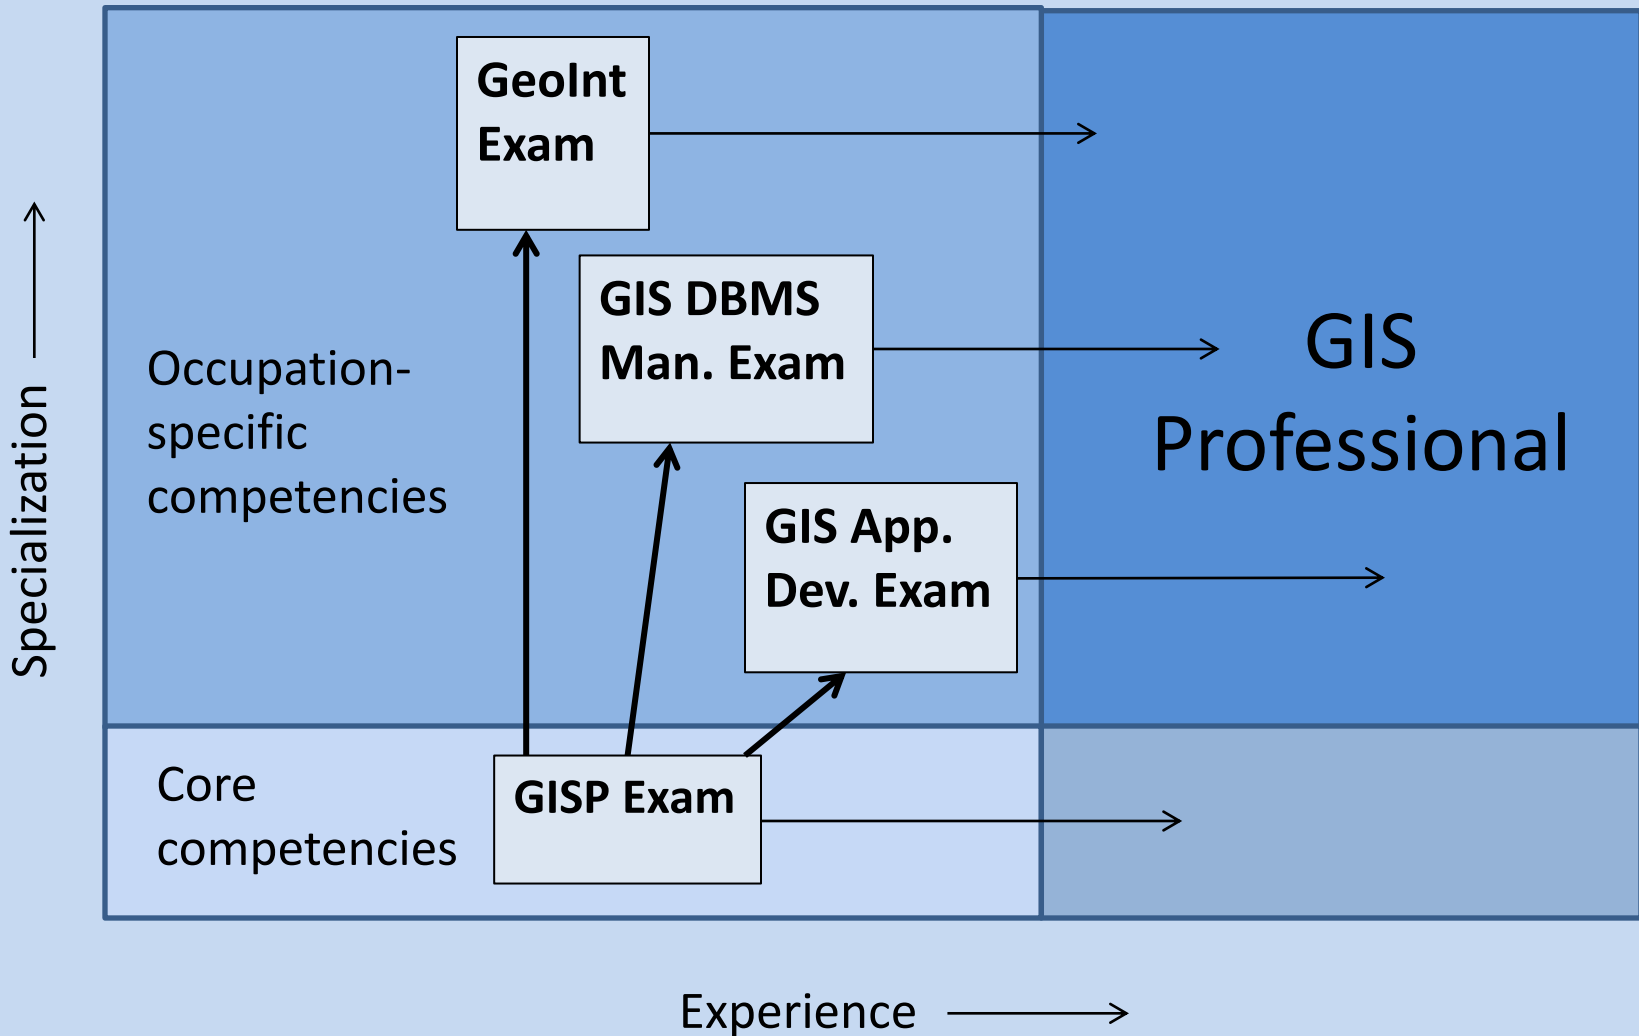

Challenges

- A coherent plan for **certification and accreditation...**
- Developing **paths for specialization** and experience...
- **Cooperation**, not competition...

The Future: A Tiered Exam Structure?

The Future: A Tiered Exam Structure?

Who Benefits?

- **Workers**

Because they will know the skills required and pathways towards a successful career in GIS.

- **Employers**

Because they will be able to hire a more informed and better educated workforce.

- **Educators**

Because they will be able to develop more coherent educational programs with better employment opportunities for their students.

How to get your GISP?

The screenshot shows the GIS Certification Institute website. At the top is the logo and the text "GIS Certification Institute". Below this is a navigation bar with links: Home, Poster Contest, Applicants, GISPs, Employers, Students, Ethics, News, Events, and About Us. The "Applicants" menu is open, showing sub-links: Applications Materials, Certification FAQs, About the Program, GISP Testimonials, GISP Recognition, and Applicant Services. The main content area features a large graphic of three globes and a map of the United States with orange dots, titled "Around The World". Below this are four buttons: APPLY ONLINE, RENEW ONLINE, ETHICS, and ABOUT GISCI. To the right, there is a "GISCI News" section with several articles, each with a "read more" link. At the bottom left, there is an "About GISCI" section with a welcome message and contact information. At the bottom right, there is a "Search GIS Registry" button and an "Invitation to Participate" banner for the exam development process.

About GISCI

Welcome to GISCI's new web site! We have moved to an online application and renewal process, and it is ready for use! Thank you for your patience!

FIRST-TIME APPLICATIONS: please click the Login button on the top right to register and gain access to the application and renewal module.

RENEWING GISPs - please email us for your existing log in information and password: info@gisci.org.

The GIS Certification Institute (GISCI) is a tax-exempt, not-for-profit organization that provides the geographic information systems (GIS) community with a complete certification program. GISCI offers participants around the world, from the first early years on the job, until retirement, a positive method of developing value for professionals and employers in the GIS profession. We offer the only industry-wide, internationally-recognized, software-agnostic Certification available to geospatial professional around the world.

GIS Certification Institute, 701 Lee Street, Suite 680, Des Plaines, IL 60016 (847) 824-7768

Permanent Bicycle and Pedestrian Counters

Shawn Megill Legendre

Information Resources Exchange Group
September 10, 2014

A Multi-Pronged Approach to Cyclist and Pedestrian Counting

- DVRPC is initiating an improved program for bicycle and pedestrian counting
- The program will include both permanent, continuous counts and regularly-collected week-long counts

TYPE

PURPOSE

PERMANENT

Provide continuous data. Allows for development of seasonal adjustment factors.

SHORT-TERM (cyclical)

Provide regularly-collected data from many locations. Allows for measurement of trends.

SHORT-TERM (non-recurring)

Provides location-specific data for use in local plans and studies.

Continuous Automated Trail User Counting Program

- DVRPC has installed 8 permanent cyclist and pedestrian counters on multi-use trails – 4 additional installations are planned
- The counters will record and report data continuously throughout the year - 15 minute increments by direction by mode
- DVRPC will use this data to calculate region-specific seasonal adjustment factors for application to week-long counts

Continuous Automated Trail User Counting Program

Chester Valley Trail - Monthly

Chester Valley Trail – Weekly

Chester Valley Trail – Daily

Chester Valley Trail – Hourly

Chester Valley Trail – 15 Minute Increments

All Trails – August 2014

Cyclical Bike Count Program

- What?
 - Ongoing measurement of bike volumes in the DVRPC region (first of its kind)
 - Weeklong counts using tubes (on- and off-road facilities)
 - About 10 locations per county to be selected as cyclical count stations, to be counted on a rolling 3-year cycle
- Why?
 - New seasonal adjustment factors will permit better weeklong count data
 - Seek to improve regional travel demand model
 - General gap in bike data: opportunity to support your planning and ours

Cyclical Bike Count Program

- When?
 - Saturation batch of counts in FY2015 (regional snapshot)
 - ~10 locations per county to be selected as cyclical count stations, to be counted on a rolling 3-year cycle
