DVRPC FY 2001 Transportation Improvement Program

for Southwestern New Jersey and Southeastern Pennsylvania

Volume IV Public Comments and Agency Responses

DVRPC FY 2001 Transportation Improvement Program

for Southwestern New Jersey and Southeastern Pennsylvania

Volume IV
Public Comments and Agency Responses

Created in 1965, the Delaware Valley Regional Planning Commission (DVRPC) is an interstate, intercounty and intercity agency that provides continuing, comprehensive and coordinated planning to shape a vision for the future growth of the Delaware Valley region. The region includes Bucks, Chester, Delaware, and Montgomery counties, as well as the City of Philadelphia, in Pennsylvania; and Burlington, Camden, Gloucester and Mercer counties in New Jersey. DVRPC provides technical assistance and services; conducts high priority studies that respond to the requests and demands of member state and local governments; fosters cooperation among various constituents to forge a consensus on diverse regional issues; determines and meets the needs of the private sector; and practices public outreach efforts to promote two-way communication and public awareness of regional issues and the Commission.

Our logo is adapted from the official DVRPC seal, and is designed as a stylized image of the Delaware Valley. The outer ring symbolizes the region as a whole, while the diagonal bar signifies the Delaware River. The two adjoining crescents represent the Commonwealth of Pennsylvania and the State of New Jersey.

DVRPC is funded by a variety of funding sources including federal grants from the U.S. Department of Transportation's Federal Highway Administration (FHWA) and Federal Transit Administration (FTA), the Pennsylvania and New Jersey departments of transportation, as well as by DVRPC's state and local member governments. The authors, however, are solely responsible for its findings and conclusions, which may not represent the official views or policies of the funding agencies.

SUMMARY OF PUBLIC OUTREACH

FY 2001 TRANSPORTATION IMPROVEMENT PROGRAM

FOR PENNSYLVANIA AND NEW JERSEY

As residents of the Delaware Valley, we face dramatic challenges to our quality of life – issues that must be addressed if we are to provide a sound future for ourselves and our children. Will traffic congestion continue to play a major role in our lives during the next five or ten years? Will our mobility be constrained by an ineffective transportation system? Will the air we breath be cleaner?

It is the responsibility of each citizen to become involved in these issues and to play a role in the decision-making process. And, it is the responsibility of the Delaware Valley Regional Planning Commission (DVRPC) to provide as many opportunities as possible for residents to be informed and aware of the decisions that will affect the future of this region.

As the metropolitan planning organization (MPO), DVRPC is the agency charged with developing the Transportation Improvement Program (TIP) for the nine-county region, which includes Bucks, Chester, Delaware, Montgomery and Philadelphia counties in Pennsylvania; and Burlington, Camden, Gloucester and Mercer counties in New Jersey. As such, DVRPC has made a commitment to engaging in meaningful dialogue with citizens of the Delaware Valley. To do so, this agency must provide sufficient and timely information to the public, as well as educating them to reach a better understanding of the region's needs. The Commission must in turn listen to the message we receive from the public to ensure trust and future interaction.

Commenting on the Transportation System

The TIP, as the agreed-upon list of priority projects for the region, is a key tool in the preservation, management, and expansion of the region's transportation system. That transportation system affects every resident of the Delaware Valley. This year, in response to Title VI and Environmental Justice concerns, DVRPC re-examined the scope of TIP public outreach efforts. Title VI of the 1964 Civil Rights Act states that "no person in the United States shall, on the grounds of race, color or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance." The principle of environmental justice in transportation ensures that projects, such as highway expansion and interstate building, do not have a disproportionately negative impact on minority and low-income populations. To this end, DVRPC utilized our geographic information systems (GIS) capabilities to identify and map low-income and minority populations. With this information available, we targeted our outreach to specific communities as well as to the region as a whole.

In addition to the required legal notices and press releases we issue each year, we held seven public meetings in strategically identified locations as follows:

TUESDAY - MAY 23, 2000 Montgomery County Community College Room 222 101 College Drive Pottstown, PA

WEDNESDAY - MAY 31, 2000 Delaware County Government Center Room 112 - 109 201 West Front Street Media, PA

TUESDAY - JUNE 6, 2000
Drexel University
2019 McAllister Building - Board Room
33rd and Chestnut Streets
Philadelphia, PA

WEDNESDAY, JUNE 21, 2000 Upper Moreland Township Building Council Room A 117 Park Ave. Willow Grove, PA THURSDAY - MAY 25, 2000 City Hall First Floor Conference Room 319 East State Street Trenton, NJ

THURSDAY - JUNE 1, 2000 Walter Rand Transportation Center 3rd Floor Meeting Room 100 Broadway Ave. Camden, NJ

WEDNESDAY - JUNE 7, 2000 John F. Kennedy Building -Café Lounge 429 J. F. Kennedy Way Willingboro, NJ

These meetings were one segment of a public comment period that opened on May 22, 2000 and extended to June 23, 2000, and were held from 4:30 - 7:30 p.m. to allow access to both the working and non-working public.

Reaching Out to the Region's Citizens

To communicate with as many citizens as possible, DVRPC issued notices of the public comment period and the scheduled public meetings to approximately 2000 individuals and organizations that comprised the welfare-to-work community, traditional transportation and transit users, underserved, minority and low income populations, chambers of commerce and citizens. Approximately 120 individuals attended the various public meetings. In addition, DVRPC staff also contacted representatives from key community organizations (i.e., Greater Philadelphia Works, the NAACP and the Urban Affairs Coalition) to solicit their involvement in reaching specific groups to communicate about the TIP and this opportunity for input. These representatives will also serve as the foundation for a task force to review DVRPC's current public participation techniques and to discuss access and mobility needs. The task force will be an essential component of DVRPC's FY 2001 Work Program project dealing with Title VI and Environmental Justice Implementation.

Legal notices were placed in The Inquirer, The Tribune, La Actualidad, The Trenton Times, and The Courier Post, and media releases were issued in May, 2000 preceding the public comment period. Particular use was made of cable television to target local municipalities. In addition, notices and TIP documents were sent to 30 regional libraries as a means of making this information available to the public. (The list of specific libraries, copies of the proofs of publication of the legal notices, and a sample media release are shown on the following pages.) As other means of public outreach, DVRPC asked SEPTA to place the notice of public meetings and the overview of the TIP in its Metro newspaper and on its website. (A sample Metro page is attached.) NJ Transit also cooperated in communicating the availability of the TIP.

DVRPC's website (www.dvrpc.org) was and is a vital tool in public outreach, and served a useful purpose during this TIP update cycle. The entire TIP document was placed on our webpage, as were the dates and locations of the public meetings and general information. More people downloaded and/or accessed the TIP materials during this public comment period than in any past year. In addition, an email address was established (tip-plan-comments@dvrpc.org) to facilitate the submission of comments.

What's Next?

DVRPC will continue to seek more effective means of getting the public involved. The agency is exploring the possibility of producing future notices in Spanish and possibly in Vietnamese and hopes to implement this with the next TIP update. Also in the works for future public outreach are media interviews.

DVRPC NOTICE OF PUBLIC MEETINGS and REQUEST FOR COMMENTS

The Delaware Valley Regional Planning Commission (DVRPC) will hold seven public comment meetings on the draft FY 2001 Transportation Improvement Program (TIP) for the New Jersey and Pennsylvania portions of the region (including Burlington, Camden, Gloucester, and Mercer counties in New Jersey and Bucks, Chester, Delaware, Montgomery and Philadelphia counties in Pennsylvania) The New Jersey public meetings will also serve as the public meetings for the Draft 2001 - 2003 New Jersey Statewide Transportation Improvement Program (STIP).

The meetings are scheduled for 4:30 - 7:30 p.m. as follows:

TUESDAY - MAY 23, 2000

Montgomery County Community College Room 222 101 College Drive Pottstown, PA

WEDNESDAY - MAY 31, 2000

Delaware County Government Center Room 112 - 109 201 West Front Street Media. PA

TUESDAY - JUNE 6, 2000

Drexel University 2019 McAllister Building - Board Room 33rd and Chestnut Streets Philadelphia, PA

WEDNESDAY, JUNE 21, 2000

Upper Moreland Township Building Council Room A 117 Park Ave. Willow Grove, PA

THURSDAY - MAY 25. 2000

City Hall First Floor Conference Room 319 East State Street Trenton, NJ

THURSDAY - JUNE 1, 2000

Walter Rand Transportation Center 3rd Floor Meeting Room 100 Broadway Ave. Camden, NJ

WEDNESDAY - JUNE 7, 2000

John F. Kennedy Building -Café Lounge 429 J. F. Kennedy Way Willingboro, NJ

Copies of the draft TIP are available for review at numerous libraries throughout the nine counties of the region, as well as in DVRPC's library, and on the DVRPC webpage at www.dvrpc.org. These documents will also be available for review at the public meetings.

The Draft FY 2001 TIP for New Jersey contains about 160 projects totaling \$995 million over three years (FY 2001 - 2003). It includes \$582 million in projects related to the highway system and \$413 million in transit related projects. The Draft FY 2001 TIP for Pennsylvania contains over 500 projects totaling about \$3.8 billion over four years (FY 2001 - 2004). It includes \$1.8 billion in projects related to the highway system and \$2.0 billion in transit related projects. Additional information is available in the enclosed Executive Summary.

The public comment period will run from May 22, 2000 through June 23, 2000. Written comments should be mailed to TIP01 Comments, c/o DVRPC Public Affairs Office, 111 South Independence Mall East, Philadelphia, PA 19106; faxed to 215-592-9125; or e-mailed to tip-plan-comments@dvrpc.org.

For more information, contact DVRPC's Public Affairs Office at 215-238-2875 or 215-238-2871.

NOTICE TO LIBRARIANS

PARTICIPATING IN THE DVRPC PUBLIC OUTREACH PROGRAM

SUMMARY: DVRPC's Draft Fiscal Year (FY) 2001 Transportation Improvement Program (TIP) for Southwestern New Jersey and Southeastern Pennsylvania is now available for public review.

The Delaware Valley Regional Planning Commission (DVRPC) serves as the metropolitan planning organization (MPO) for the nine-county metropolitan area that includes Bucks, Chester, Delaware, Montgomery and Philadelphia counties in Pennsylvania; and Burlington, Camden, Gloucester and Mercer counties in New Jersey. As such, DVRPC is required to develop a Transportation Improvement Program (TIP) which identifies all priority transportation projects for which federal funds will be sought, along with non-federally funded projects that are regionally significant. Public participation is an essential element of this process.

Your willingness to be a part of this process is vital to its success. We ask that you exhibit the enclosed documents (Volumes I, II and III) in a location that is readily accessible to your patrons. The enclosed public notice outlines the purpose of these publications and the public outreach effort that has been designed to elicit comments.

The public has been directed to send their comments to DVRPC. If you receive any written comments on the Draft TIP, please mail them to: TIP01 - Comments, c/o DVRPC Public Affairs Office, The Bourse Building, 111 South Independence Mall East, Philadelphia, PA 19106. These comments should be in our offices no later than 4:30 p.m. on June 23, 2000. Any questions regarding your role in this outreach effort should be addressed to Eileen Gallagher, DVRPC's Librarian, at 215-238-2817. You and/or your patrons may also email comments to tip-plan-comments@dvrpc.org.

Thank you in advance for your efforts on our behalf and for your enthusiastic response. Your participation is very much appreciated.

Sincerely yours,

John J. Coscia
Executive Director

TRANSPORTATION IMPROVEMENT PROGRAM READY FOR REVIEW

Documents List Transportation Projects for Delaware Valley

Summary: Public review of the Delaware Valley's Transportation Improvement Program (TIP) for both Pennsylvania and New Jersey extends from May 22 through June 23, 2000. The comment period offers seven public meetings; written comments may be mailed or faxed to the Delaware Valley Regional Planning Commission (DVRPC) or emailed to tip-plancomments@dvrpc.org. The TIP represents \$995 million in transportation funding for the New Jersey portion of the DVRPC region, and \$3.8 billion for DVRPC's Pennsylvania subregion.

Through June 23, 2000, Delaware Valley residents will have a unique opportunity to influence the region's future. That date will conclude the 30-day public review period for the Delaware Valley Regional Planning Commission's (DVRPC's) draft Fiscal Year 2001 Transportation Improvement Program (TIP) for the New Jersey and Pennsylvania portions of the Delaware Valley region. The counties in the DVRPC region include Burlington, Camden, Gloucester and Mercer in New Jersey; and Bucks, Chester, Delaware, Montgomery and Philadelphia in Pennsylvania.

TIP READY FOR REVIEW

2

DVRPC will hold seven public comment meetings on the draft TIP as part of the 30-day comment period that begins on May 22. The public meetings are scheduled prior to consideration of the TIP by the DVRPC Board on July 27, 2000, and are transit, bicycle, and pedestrian-accessible. They are scheduled to be held from 4:30 - 7:30 p.m. as follows:

TUESDAY - MAY 23, 2000

Montgomery County Community College Room 222 101 College Drive Pottstown, PA

WEDNESDAY - MAY 31, 2000

Delaware County Government Center Room 112 - 109 201 West Front Street Media, PA

TUESDAY - JUNE 6, 2000

Drexel University 2019 McAllister Building - Board Room 33rd and Chestnut Streets Philadelphia, PA

WEDNESDAY, JUNE 21, 2000

Upper Moreland Township Building Council Room A 117 Park Ave. Willow Grove, PA

THURSDAY - MAY 25, 2000

City Hall First Floor Conference Room 319 East State Street Trenton, NJ

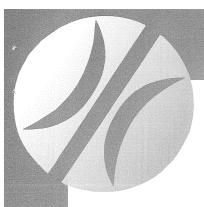

THURSDAY - JUNE 1, 2000

Walter Rand Transportation Center 3rd Floor Meeting Room 100 Broadway Ave. Camden, NJ

WEDNESDAY - JUNE 7, 2000

Willingboro Township John F. Kennedy Building 429 J. F. Kennedy Way Willingboro, NJ

At each meeting, DVRPC staff will provide an overview of the draft TIP several times throughout the evening, with a period for questions and comments following each presentation. The New Jersey public meetings will also serve as the public meetings for the Draft FY 2001 - 2003 New Jersey Statewide Transportation Improvement Program (STIP). The New Jersey STIP is available on the following website: http://www.state.nj.us/transportation.

TIP READY FOR REVIEW

3

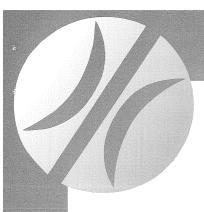

The New Jersey portion of the TIP contains about 160 projects, totaling \$995 million to be implemented over the next three years (FY 2001 - 2003). It includes \$582 million in projects primarily addressing the highway system funded through the Federal Highway Administration and the State of New Jersey, and \$413 million of transit projects proposed by NJ TRANSIT and DRPA/PATCO and funded through the Federal Transit Administration, the State of New Jersey, and DRPA/PATCO.

The TIP provides a wide variety of projects that will improve the entire transportation system in New Jersey, such as the I-295/NJ 42/I-76 Interchange Improvements, Southern New Jersey Light Rail Transit project, NJ Route 41 Operational Improvements, replacement of eight bridges and the Delaware River Pedestrian and Bicycle Path.

The Pennsylvania portion of the TIP includes over 500 projects totaling about \$3.8 billion to be implemented over the next four years (FY 2001 - 2004). It contains \$1.8 billion in projects primarily focusing on the highway system, and \$2.0 billion of transit projects for SEPTA, Pottstown Urban Transit and the Keystone Service.

This TIP lists projects that include the Reconstruction of PA-309, PA-413 Corridor Improvements, PA-291 Industrial Highway Widening, I-95 Airport Ramp Revisions, Intelligent Transportation Systems on I-476, reconstruction of the South Street Bridges, the Schuylkill Valley Metro, the Chester Valley Trail and the On-Road Bicycle Mobility Program.

The complete TIP document that is available for public review contains three volumes. Volume I provides a general overview of the TIP and the TIP development process, as well as summary charts and tables. Volumes II and III (for New Jersey and Pennsylvania respectively) contain individual county maps of the highway projects and a regional map of the transit projects, and a detailed list of the projects including project descriptions, costs and anticipated schedules.

TIP READY FOR REVIEW

4

Copies of the draft TIP are available for review at numerous libraries throughout the region. The document is available on five-day loan from the DVRPC Library as well. It can also be reviewed on DVRPC's Webpage at www.dvrpc.org. In addition, the TIP will be available for review at the public meetings, as will the documents proposed by the other metropolitan planning organizations (MPO's) within the State of New Jersey.

The production of the TIP, which is required by federal law, is the culmination of the transportation planning process and represents a consensus among state and regional officials as to what improvements to pursue. Each TIP includes all projects that intend to use federal funds, along with non-federally funded projects that are regionally significant. The lists are multi-modal; in addition to the more traditional highway and public transit projects, it includes bicycle, pedestrian, and freight related projects as well.

Written remarks will also be accepted and must be received by 4:30 p.m. on June 23 at DVRPC's Office of Public Affairs, The Bourse Building, 111 South Independence Mall East, Philadelphia, PA 19106 via mail, fax (215-592-9125) or email (<u>tip-plan-comments@dvrpc.org</u>). For additional information, contact the DVRPC Public Affairs Office at (215) 238-2875.

DVRPC serves as the official planning and review agency for the nine-county metropolitan region which includes Bucks, Chester, Delaware, Montgomery and Philadelphia counties in Pennsylvania; and Burlington, Camden, Gloucester and Mercer counties in New Jersey. Through data collection, research, coordination, and planning efforts, DVRPC sets a framework for governmental decisions affecting development within the Delaware Valley.

DVRPC NOTICE OF PUBLIC MEETINGS and REQUEST FOR COMMENTS

The Delaware Valley Regional Planning Commission (DVRPC) will hold seven public comment meetings on the draft FY 2001 Transportation Improvement Program (TIP) for the New Jersey and Pennsyvlania portions of the region (including Burlington, Camden, Gloucesgter, and Mercer Counties in New Jersey and Bucks, Chester, Delaware, Montgomery and Philadelphia counties in Pennsylvania). The New Jersey public meetings will also serve as the public meetings for the Draft 2001-2003 New Jersey Statewide Transportation Improvement Program (STIP).

The meetings are scheduled for 4:30 - 7:30 p.m. as follows: Tuesday, Mar 23, 2000 at Montgomery County Community College - Room 222, 101 College Drive, Pottstown, PA; Thursday, May 25, 2000 at City Hall - First Floor Conference Room, 319 East State St., Trenton, NJ; Wednesday, May 31, 2000 at Delaware County Government Center - Room 112 - 109, 201 W. Front St., Media, PA; Thursday, June 1, 2000 at Walter Rand Transportation Center - 3rd Floor Meeting Room, 100 Broadway Ave., Camden, NJ; Tuesday, June 6, 2000 at Drexel University, 2019 McAllister Bldg. - Board Room, 33rd and Chestnut Sts., Philadelphia, PA; Wednesday, June 7, 2000 at John F. Kennedy Building - Cafe Lounge, 429 J.F. Kennedy Way, Willingboro, NJ; and Wednesday, June 21, 2000 at Upper Moreland Township Building - Council Room A, 117 Park Ave., Willow Grove, PA.

Copies of the draft TIP are available for review at numerous libraries throughout the nine counties of the region, as well as in DVRPC's library, and on the DVRPC webpage at www.dvrpc.org. These documents will also be available for review at the public meetings.

The Draft FY 2001 TIP for New Jersey contains about 160 projects totaling \$995 million over three years (FY 2001 - 2003). It includes \$582 million in projects related to the highway system and \$413 million in transit related projects. The Draft FY 2001 TIP for Pennsylvania contains over 500 projects totaling about \$3.8 billion over four years (FY 2001-2004). It includes \$1.8 billion in projects related to the highway system and \$2.0 billion in transit related projects.

The public comment period will run from May 22, 2000 through June 23, 2000. Written comments should be mailed to TIP01 Comments, c/o DVRPC Public Affairs Office, 111 South independence Mall East, Philadelphia, PA 19106; or faxed to 215-592-9125; or emailed to tip-plan-comments@dvrpc.org.

May 22, 2000

Public Notice

Delaware Valley Regional Planning Commission Transportation Improvement Program

From May 22 through June 23, 2000, Delaware Valley residents have a unique opportunity to influence the region's future by participating in the review of the Delaware Valley Regional Planning Commission's (DVRPC's) draft Fiscal Year 2001 Transportation Improvement Program (TIP). DVRPC serves as the official planning and review agency for the nine-county metropolitan region which includes Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties in Pennsylvania; and Burlington, Camden, Gloucester, and Mercer Counties in New Jersey.

The draft TIP covers the New Jersey and Pennsylvania portions of the Delaware Valley region and identifies \$995 million in transportation funding for 160 projects in New Jersey, and over 500 projects totaling \$3.8 billion for the Pennsylvania sub-region. Included in the Pennsylvania portion are \$1.8 billion in projects primarily focusing on the highway system, and \$2.0 billion covering transit projects for SEPTA, Pottstown Urban Transit and the Keystone Service that will be implemented over the next four years (FY2001-2004).

Production of the TIP is required by federal law and includes all projects that intend to use federal funds, along with non-federally funded projects that are regionally significant. The lists are multi-modal. In addition to the more traditional highway and public transit projects, it includes bicycle, pedestrian, and freight-related projects.

DVRPC will hold seven public comment meetings on the draft TIP as part of the 30-day comment period. The public meetings are scheduled prior to consideration of the TIP by the DVRPC Board on July 27, 2000, and are transit, bicycle, and pedestrian-accessible. The meetings will be held from 4:30 - 7:30 p.m. as follows:

TUESDAY - MAY 23, 2000

Montgomery County Community College Room 222 101 College Drive Pottstown, PA

WEDNESDAY - MAY 31, 2000

Delaware County Government Center Room 112 - 109 201 West Front Street Media, PA

TUESDAY - JUNE 6, 2000

Drexel University 2019 McAllister Building - Board Room 33rd and Chestnut Streets Philadelphia, PA

WEDNESDAY, JUNE 21, 2000

Upper Moreland Township Building Council Room A 117 Park Ave. Willow Grove, PA THURSDAY - MAY 25, 2000

City Hall
First Floor Conference Room
319 East State Street
Trenton, NJ

THURSDAY - JUNE 1, 2000

Walter Rand Transportation Center 3rd Floor Meeting Room 100 Broadway Ave. Camden, NJ

WEDNESDAY - JUNE 7, 2000

Willingboro Township John F. Kennedy Building 429 J. F. Kennedy Way Willingboro, NJ

Copies of the draft TIP are available for review at numerous libraries throughout the region. The document is also available on five-day loan from the DVRPC Library, and can be reviewed on DVRPC's webpage at www.dvrpc.org. The TIP will be available for review at the public meetings, as will the documents proposed by the other metropolitan planning organizations (MPO's) within the State of New Jersey.

Written remarks from the public must be received by 4:30 p.m. on June 23 at DVRPC's Office of Public Affairs, The Bourse Building, 111 South Independence Mall East, Philadelphia, PA 19106 via mail, fax (215-592-9125), or email (tip-plan-comments@dvrpc.org). For additional information, contact the DVRPC Public Affairs Office at (215) 238-2875.

COMMENTS OF THE DVRPC REGIONAL CITIZENS COMMITTEE REGARDING ADOPTION OF THE DRAFT DVRPC FY 2001 TRANSPORTATION IMPROVEMENT PROGRAM (TIP) FOR NEW JERSEY AND PENNSYLVANIA

The RCC recommends that the DVRPC Board approve the DVRPC Draft FY 2001 TIP for New Jersey.

The RCC also submits the following comments on the New Jersey TIP:

- 1. TIP#2374 (Delaware River Tram): The RCC continues to oppose the Delaware River Tram for the following reasons:
- a) There is no justification for the project;
- b) This project is tantamount to an amusement park ride;
- c) There is much concern about the operation of the tram in different weather extremes;
- d) DRPA should focus on its core mission which is to expand PATCO operations;
- e) The agency should be addressing other, more timely transportation issues.
- 2. TIP#4321 (Scotch Road/I-95 Interchange): The RCC continues to oppose this project.
- 3. TIP#2340A & B (I-295/76/NJ42 Missing Moves and Direct Connection): On the basis of safety concerns, the RCC supports the missing Moves and Direct Connection. However, the committee feels these projects should not move forward until transit is more thoroughly examined. As the RCC recommended in 1998, transit alternatives can significantly address the mobility pressures of the area: data in the Burlington-Gloucester MIS needs to be considered. Specifically, the alternatives to be studied should include:
- 1. Light rail and modified light rail (modified PATCO) alternatives to Mantua where the Camden-Glassboro freight line intersects Route 55.
- 2. Furthermore, Atlantic City Rail Line Improvements should include--
- a. The addition of one peak direction round-trip;
- b. Lessen travel time of each run by 20-35 minutes to what it was 50 years ago;
- c. Directly extend service to Suburban Station.
 In addition, the RCC encourages vigorous consistency with the New Jersey State Development and Redevelopment Plan, with particular emphasis on the transportation improvements listed above.
- 4. TIP#4313 (Route 29): The RCC continues its opposition to the Route 29

(ID#I)

project and contends that the environmental review was inadequate.

- TIP#4311 (Millstone Bypass): The RCC believes that action by the DVRPC Board on the Millstone Bypass is premature prior to completion of the Environmental Assessment or Environmental Impact Statement.
- 6. TIPDB#T300 (Transit Rail Initiatives): The extension of the Trenton to Camden line and extension of the PATCO Systems should be studied.
- 7. The RCC also questions why project costs for North Jersey are in the DVRPC TIP for this region.

In addition, the RCC recommends that the DVRPC Board approve the DVRPC Draft FY 2001 TIP for Pennsylvania.

The RCC also submits the following comments on the Pennsylvania TIP:

- 1. In general, arrangement of the TIP should be improved as follows:
- a. There is no index other than on maps;
- b. Maps give project numbers but not page numbers;
- c. Individual projects are not listed according to TIP number sequence;
- d. Related projects are scattered without cross-reference. One instance is the various Route 23 projects)TIP#8743, 8776 and M 06.
- 2. Opposition is highly likely on TIP#8743 (PA 23). This project would convert what is now a local residential street (Chelsea Drive) into a four-lane segment of Route 23. The area was assured years ago that the Route 23 project was permanently halted a mile west of Bridgeport. The RCC questions whether there has been community involvement in this project.
- 3. TIP#7879 (Chester Creek Bicycle/Pedestrian Trail): Trails should be in vicinity of rail not on the rail grade. Experience has shown that rail restoration is likely to be politically impractical if the trail is located on the rail grade.
- 4. TIP#D26 (McDade Blvd.): Traffic signals are to be pre-empted by buses at Darby Bus Terminal. The RCC supports this all too rare "Transit First" Initiative.
- 5. TIP#8475 (Church Road): Are sidewalks included in this bridge replacement?
- 6. TIP#8436 (Greenwood Ave.): Will sidewalks on the bridge replacement meet ADA standards?
- 7. TIP#8798 (Pennypack Connector Trail): The RCC again questions whether rail restoration would be politically impractical if the trail is located on the rail grade.

Mr. John Coscia
Attention: Charles Dougherty
Delaware Valley Regional Planning Commission
111 South Independence Mall East
Bourse Building
8th Floor
Philadelphia, PA 19106

Dear Mr. Coscia:

On behalf of the New Jersey Department of Transportation, I would like to offer comments to the DVRPC draft TIP which are found on the attachment.

As agreed in the past, NJDOT will develop a list of "transition projects" for inclusion in the final TIP document. These are projects which may not be authorized within the latter part of FY 2000 and may be suitable for authorization under the "transition" rules in the first part of FY 2001. This list will be provided at a later date.

I hope these comments are helpful to you, and we look forward to continuing to work with DVRPC to provide the best possible selection of transportation improvements projects to serve the citizens of the region.

Very truly yours,

Mark L. Stout

Director

Attachment

NJDOT Comments to DVRPC Draft TIP

DVRPC Projects

- ➤ Route 1, D&R Canal Pedestrian Bridge, DB 97117

 We have been informed by the Project Manager that the construction of this pedestrian bridge will be delayed until FY 2002; therefore, the construction funding (STP-TE) of 1.680 M should be moved from FY 2001 to FY 2002.
- Route 29, Section 10C 11B, DB 551—Ferry Street to Lamberton Road, system connectivity
 An additional \$1.2 M (STP) is required in construction funds in FY 2001 for the wetlands mitigation associated with this project; therefore, this amount should be added to the existing \$8.0 M (State) construction funding in FY 2001.
- Provided Policy Pedestrian Policy Path, DB 551B

 It has been brought to our attention that right of way funding, in the amount of \$500,000 (DEMO), will be required in FY 2001; therefore, this amount should be added to the funding already shown in the TIP.
- ➤ Route 295/42/I-76, Study B (Direct Connection) (5), DB 355
 It has been brought to our attention that an additional \$1.0 M PRD (DEMO) will be required for this project in FY 2001 in order to continue the Feasibility Assessment phase for this project. Please add this amount to the funding already shown in the TIP.
- ➤ Route 31 and CR 518, DB 9272A

 The design funding in FY 2001 has been changed from State to STP funding.

 The dollar amount and phase have not changed, only the funding source has been changed. The funding shown in FY 2002 and FY 2003 should remain as shown.
- Route 44, Fowler Lane, Drainage, DB 93204
 The Final Scope Development of this project has not begun; therefore, funding is being provided in FY 2001 in the amount of \$302,000 for FSD (STP). In keeping with established practices, only the FSD funding will be shown; therefore, design funding in FY 2001, right of way funding in FY 2002, and construction funding in FY 2003 should be deleted from the TIP. This project will also be added to the FY 2001-02 Study & Development program, showing FSD in FY 2001.

Route 70, Bisphams Mill Creek Bridge, DB 98359
Due to an error in the database provided to DVRPC, this project was omitted from the TIP. Please add the project for PRD funding in FY 2001 in the

amount of 0.500 (STP). This project for PRD funding in FY 2001 in the amount of 0.500 (STP).

- ➤ Route 73/70 (5), DB 567—Marlton Circle elimination

 Design was funded for this project previously; however, it will not be authorized until FY 2001. The amount of \$1.3 M (NHS) design funding should be added in FY 2001. The right of way funding in FY 2002 and construction funding in FY 2004 remain as currently listed in the TIP.
- ➤ Route 73, Fox Meadow Road/Fellowship Road, DB 94068

 The PRD funding of 0.100 in FY 2001 should deleted; this phase of work is being funded in FY 2000. The rest of the funding should remain as shown in the TIP.
- Route 206 (37) (38), DB 9210—Intersection improvements at Stokes Road and Indian Mills Road The construction funding of 1.395 M in FY 2001 should be deleted; this project is being funded in FY 2000. This entire record should be deleted from the TIP.
- > Route 322, Corridor Improvements, DB 97112
 At your request, this project is being added to the TIP for PRD funding (STP-STU) in the amount of \$450,000 in FY 2001.

Statewide Program Revisions

> Transportation Enhancements, DB X107

The STP-TE funding in FY 2001 has been increased from \$11.06 M to \$13.61 M to allow for additional funding for transportation enhancements statewide. The rest of the funding will remain as currently shown in the TIP.

> Bicycle Projects, Local System, DB 99357

The State funding in FY 2001 has been increased from \$2.0 M to \$4.0 M to provide additional funds for locally initiated bicycle accommodation projects. The rest of the funding will remain as currently shown in the TIP.

> Fall Arrest Program, DB 00375

It is requested this new program, to be funded in FY 2001 for \$1.5 M State funding, be added to the TIP. The program is a result of a safety requirement of PEOSHA. This system allows personnel (i.e. movable bridge operators and maintenance personnel) to move safely on structures where

elevated work is required. The system will prevent falls greater than six feet.

▶ Project Development, Preliminary Engineering, DB X32
The State funding in FY 2001 has been increased from \$3.0 M to \$3.5 M to provide additional funding for Feasibility Assessment work on projects in the Study and Development Program. The rest of the funding will remain as currently shown in the TIP.

Resurfacing Program, State, DB X03D

The State funding for this program has been decreased in FY 2001 from \$13.775 M to \$8.725 M. The State funding has been increased in FY 2002 from \$40.0 M to \$43.0 M. The rest of the funding will remain as currently shown in the TIP.

University Transportation Research Technology, DB X126 State funding in FY 2001 has been increased from \$1.0 M to \$2.0 M. The additional funding will be used as follows: 0.250 match for additional funding available under the Rutgers-CAIT Federal Research Grant; 0.500 will be made available for the Commissioner's Challenge Grant Program; and 0.250 will be used toward 100% State funded technology projects which are not eligible for federal participation.

> Ferry Program, DB 00377

It is requested that this new program, set up for a portion of the federal "Ferry" funding which is allocated to New Jersey, be added to the TIP. It is requested that funding be added in FY 2001 at \$2.0 M in Ferry Funds. This portion is available to allocate statewide for the rehabilitation and/or development of ferry facilities. Please note that this funding is outside the obligation ceiling.

Mr. Charles Dougherty Delaware Valley Regional Planning Commission 111 S. Independence Mall East Philadelphia, PA 19106

Dear Mr. Dougherty:

Attached, please find a new project application form to implement Intelligent Transportation Systems (ITS) Institutional Coordination technology to be considered for inclusion in the Delaware Valley Regional Planning Commission's (DVRPC) Fiscal Year 2001-2004 Transportation Improvement Program (TIP).

This is a phased concept to implement a technology for institutional coordination of ITS in the Delaware Valley. This project provides the region's ITS stakeholders with opportunities to share and disseminate information on travel conditions and coordinate the regional deployment of ITS systems in the Delaware Valley. DVRPC staff has presented this project to the executive staff at PennDOT, and NJDOT. The project was endorsed by the Delaware Valley ITS Coordinating Council, a policy level body representing the region's ITS stakeholders, and will be sent to the DVRPC Board for inclusion in the region's Long Range Plan. This project is consistent with US DOT's National ITS Architecture and with the Delaware Valley's Regional ITS Architecture.

If you need any further information, please contact me.

Sincerely,

Donald S. Shanis, Ph.D.

1 hold S. Sla

Associate Director

Transportation Planning

DVRPC TRANSPORTATION IMPROVEMENT PROGRAM (TIP) New Project Application Form (Form Revised 01/07/00)

11 #3

(Type in the space provided.)

COUNTY:

Regionwide

PROJECT TITLE:

ITS Institutional Coordination (PRIMIS)

PROJECT LOCATION:

Region

MUNICIPALITIES:

Various

DESCRIPTION OF IMPROVEMENT: This three-phase project implements a Philadelphia Regional Integrated Multi-modal Information Sharing (PRIMIS) concept to provide a framework for institutional coordination of ITS in the Delaware Valley. This framework provides the region's ITS stakeholders opportunities to share and disseminate information on travel conditions and coordinate the regional deployment of ITS systems in the region.

The first phase is envisioned as an initial low-tech, non capital intensive approach to building the relationships among the stakeholders necessary for effective coordination. In this phase, DVRPC will establish and provide staff support for a formal ITS committee composed of the region's ITS stakeholders. This phase applies a proactive approach to improving the information flow between agencies. Missing linkages between agencies will be identified and this will help to develop better mechanisms or procedures to enhance the communication framework. An extensive list of contact names and phone numbers will be prepared by DVRPC and provided to all the stakeholders. The ITS committee will also be involved in creating an outreach program where they would sponsor workshops, agency tours and training classes. These workshops will be aimed at both the planning and operating agency personnel to obtain a better understanding of the data received from other organizations, discuss mutual problems of data collection, and disseminate sensitive data. The goal of this phase is to improve and enhance the information sharing among ITS stakeholders, increase the number of stakeholders sharing information on travel conditions and provide the necessary training to bring all the stakeholders to at least a minimum technological level. The result will be improved communications.

Phase II represents a concept that utilizes and focuses the I-95 Corridor Coalition's Information Exchange Network (IEN) to facilitate communications using a computer message/digital message system to notify agencies about incidents or unusual conditions that affect them. The information will be used to support coordinated transportation management through a component of the I-95 IEN that is focused on the Delaware Valley. The I-95 IEN will be modified to increase the number of transportation facilities in the Delaware Valley and increase accessibility to the IEN by additional organizations. Workstations will be located at operations/control centers or other designated stakeholder sites. The workstations could be connected to one another via the I-95 Corridor Coalition's wide area network (WAN). Each agency would provide local information via their workstation. The workstations handle the transport of agency data (via the communications network) to a regional server(s) where it is combined with data from other agencies. The regional server(s) then distributes the regional/corridor information to each agency for display on their IEN workstation. Extensive training is envisioned for all personnel operating an IEN workstation.

DVRPC TRANSPORTATION IMPROVEMENT PROGRAM (TIP) New Project Application Form (Form Revised 01/07/00)

(Type in the space provided.)

Phase III represents an enhancement over the IEN by incorporating an interactive database and graphical interface to view congestion levels, incident information, and video feeds from various partners. Besides information sharing, the wide area network will provide a mechanism for operating agencies to confidentially share information and request assistance from each other. From a communications perspective, the interactive database will use internet protocols and off the self software to transmit and store information including graphics, database updates, video feeds, and e-mail messages. At each agency's workstation translation software will merge individual agency databases into the regional database. A website with real-time regional travel information and condition data will be developed and extensive training will be provided for all organizations.

RE: DVRPC FY 2001 TRANSPORTATION IMPROVEMENT PROGRAM

Dear Mr. Dougherty:

There are two projects I would like to comment upon so that the FY 2001- 2003 TIP can be modified.

The first project – DB #D9904(-TIP #2350) East Atlantic Avenue over Peter's Creekneed to carry over engineering funds. A request will be submitted within the next week to NJDOT Local Government Services Office to authorize award for a design contract.

The second project DB#D95005 (TIP#2352) also needs design funding to be re-instated. A meeting is being scheduled by the local Government Services Office to work out differences with FHWA and SHPO.

Any help you can provide will be greatly appreciated..

Very truly yours,

Robert E. Kelly, P.E. County Engineer

Attention: Mr. Charles Dougherty

SUBJ: LETTER OF COMMENT ON FY 2001-2003 DRAFT TIP

Dear Mr. Dougherty:

Please accept these comments, in addition to those contained in my previous letter, regarding the FY 2001-2003 Draft TIP. Specifically, I wish to address TIP Item #2324, the Camden County Sign Management Program. This is a multi-phased project which first appeared in the 1996 TIP with a total program cost of \$2.264M. Subsequently, the amount that was finally approved in the 1998 TIP was \$1.6M.

The first phase of the project, the sign inventory database development, was authorized in 1998 for the amount of \$.711M. Recently, federal funding in the amount of \$.175M was requested to conduct the second phase, engineering and design. This amount is significantly less than estimated in the original project proposal.

The FY 2001-2003 Draft TIP indicates \$.500M in FY 2001 for the final phase of the Camden County Sign Management Program. It is requested that this amount be increased by \$.350M to \$.850M in FY 2001 for the implementation of upgrades and improvements to Camden County roadway signage. This requested increase is consistent with the original project estimate of \$1.6M in the 1998 TIP and is considerably less than the original amount of \$2.264M contained in the 1996 TIP.

If there is a need for additional information, please do not hesitate to contact me or Mr. Curt Noe, the project manager.

Sincerely,

Kobert Kelly, PE Kelly

County Engineer

Subject: FY01 TIP

You may wish to include the following transit projects for inclusion in the TIP:

Vol. II - New Jersey Subregion

West Trenton Line Corridor - NJ TRANSIT is completing a conceptual design and an Environmental Assessment (EA) for restoration of service on CSX's West Trenton Line. This service would run between West Trenton (Ewing Twp.), where connections can be made to/from SEPTA R3 trains, and Newark. This non-electrified line would join NJ TRANSIT's Raritan Valley Line in Bridgewater Twp. (Somerset County) and continue northeastward to Newark. Planning is under the auspices of the North Jersey Transportation Planning Agency, but since it is proposed to serve four stations in Mercer County [West Trenton, Route I-95, Marshall's Corner, and Hopewell], it should probably be included in our TIP as well. To date, Congress has appropriated \$2.48M in New Start funds for the project. It is expected that the EA should be completed by July 2000.

Vol. III - Pennsylvania Subregion

Roosevelt Boulevard Corridor - The Philadelphia City Planning Commission, in conjunction with SEPTA, is conducting a Transportation Investment Study (TIS) for extending rail transit service to northeastern Philadelphia. Funding for the study was provided through FHWA's Surface Transportation Program under its Urban Area Allocation.

Quakertown/Stony Creek Rail Restoration - The Bucks County Planning Commission, in conjunction with the Montgomery County Planning Commission, SEPTA, and DVRPC, is examining the feasibility of restoring rail passenger service to the Quakertown [Shelly (Richland Twp.) to Lansdale] and Stony Creek [Lansdale to Norristown] branches. The study has been funded through an FTA Technical Study Grant.

Re:

Name Change - TIP # 1350, DB# 891

South Jersey Food Distribution Center

Dear Chick:

As you are aware, what was the South Jersey Food Distribution Center, is now the Haines Industrial Center. We would therefore request, that you change the FY 2001 Transportation Improvement Program entry for that project to the following:

DB# 891	130	Haines Industrial Center
TIP# 1350		Haines Industrial Center access and roadway improvements.
A/Q Code		This project will provide for the construction of an access point at Route 130 along with associated roadway improvements. This new access will serve a station and park & ride on the SNJLRTS.

Prog Mgr:

Burlington Twp./Florence Twp.

The rest of the entry as it now reads is correct.

Thank you for your assistance in this matter. Questions? Call me at (856) 642 - 3809.

Sincerely yours,

Carol Ann Thomas,

Principal Transportation Planner

March 31, 2000

FY 2001 TIP Comments DVRPC Public Affairs Office The Bourse Building 111 South Independence Mall East Philadelphia. PA 19106

Attn.: Mr. Charles Dougherty

Dear Mr. Dougherty:

On behalf of the Delaware Valley Goods Movement Task Force's Planning Subcommittee, thank you very much for permitting many members of the Task Force the advanced opportunity to review the candidate new projects from the preliminary draft working editions of the New Jersey and Pennsylvania highway program portions of the FY 2001 Transportation Improvement Program (TIP). As you know, the Planning Subcommittee takes its periodic review of the TIP very seriously and has been performing this function on behalf of the local goods movement community for the past several years.

The following comments regarding the candidate new projects are offered from the perspective of emphasizing the goods movement aspects of the TIP and of maintaining the region as an international freight center. The comments about the project sets result from a meeting of the Planning Subcommittee (in conjunction with the Data and Shippers Subcommittees and the Traffic Club of Philadelphia), discussions with DVRPC member government representatives (i.e., the state departments of transportation, the cities, and the counties), and DVRPC staff research. These comments will be summarized for the full Delaware Valley Goods Movement Task Force at its April 12, 2000 meeting.

- 1. Several of the candidate highway improvements which are noted below will spur economic activity and goods movement in the region. It is suggested that these projects, which can be regarded as the Goods Movement Task Force's priority new TIP projects, be packaged together and promoted by DVRPC to demonstrate the region's use of transportation funding for economic development and freight transportation purposes.
- 2. The proposed truck climbing lane on **Route 232** (#B06) in Wrightstown Township, Bucks County will greatly benefit quarry-related truck traffic, safety, and traffic flow in the corridor.

- 3. Construction of the **French Creek Parkway** (from PA 113 to Bridge Street in Chester County) (#C01) is an important ingredient in the redevelopment of the former Phoenix Steel site. More than 5,000 jobs may be created in this mixed use development. The resultant development will generate significant demand for freight services, and bolster population and consumer demand in the Phoenixville area.
- 4. **The I-95/US 322 Interchange Improvement Study** (#D23, Delaware County) should include explicit consideration of the nearby CSX Twin Oaks automobile terminal. The Twin Oaks facility is a large truck trip generator, is served by a National Highway System connector (i.e., Bethel Road), and has been a part of DVRPC's intermodal management system (IMS) work.
- 5. **The Lloyd Street Bridge Replacement** (#D21) and **Chester City Access Improvements** (#D25, Delaware County) are vital projects. They can capitalize on the widening of the Industrial Highway (PA 291), further spur economic activity in Chester, and reinforce efforts to fulfill Chester's designation as a DVRPC *Revitalized Center*. (Note: DVRPC is also currently performing an *I-95 Access Study in the Chester Area—Phase 1*.)
- 6. The removal of the **PA 29** bridge and overpass filling at the rail line in Pennsburg and Red Hill Boroughs (#M01, Montgomery County) could prevent future use of the rail line south of where it currently operates. The Penn Eastern Rail Line from Emmaus (Lehigh County) now ends in Pennsburg. It is strongly recommended that it be confirmed that there is no potential future reuse of this line for rail freight shipping purposes and that the line is, in fact, formally abandoned. Furthermore, it is recommended that all future candidate TIP projects be *red-flagged* when they entail severing a rail line and that these potential projects be brought to the attention of the Delaware Valley Goods Movement Task Force.
- 7. Two projects in Montgomery County will facilitate more intensive commercial uses of riverfront areas along the Schuylkill River. They are: the road extension of **Lafayette Street** in Norristown (#M05), and the **Keystone Boulevard** (#M09) new roadway in Pottstown.
- 8. A primary objective of the **Upper Perkiomen Industrial Access Project** (#M07, Montgomery County) is improved truck access.
- 9. The Pennsylvania Turnpike ramp modifications at the **Lansdale Interchange** (#M16, Montgomery County) are a necessary part of overall improvements for facilitating truck movements to and from economic activity located near the interchange. The Planning Subcommittee wishes to emphasize the sensitive nature of ramp geometry for accommodating truck movements and urges the careful use of adequate design standards for all future ramp projects.
- 10. The retention of a **Design Review Manager for I-95** (#P23, Philadelphia and Bucks County) is critical. I-95 is one of the most important highways for commercial traffic in the region and it was recently recognized in the Commonwealth of Pennsylvania's

Statewide Long Range Transportation Plan (Corridor 1: The Delaware River Intermodal Corridor). Designating a design review manger can help speed improvements to I-95 and provide project consistency.

- 11. In Philadelphia, another important project which should be added to the candidate project list is the **Delaware Avenue Extension** from Richmond Street to Allegheny Avenue. This improvement would better serve truck traffic flows along Delaware Avenue and it would also afford an elongated detour route to I-95.
- 12. The construction of the **Haines Industrial Park** (#891) in Florence Township (Burlington County) is a major economic development project which will require highway access improvements. The related construction of a new interchange of the New Jersey Turnpike and US 130 is nearly completed.
- 13. **Route 55** interchange improvements at Deptford Center Road (#9332, Deptford Township, Gloucester County) will greatly facilitate traffic flows and commercial activity in the Deptford Mall area.
- 14. For informational purposes, it is noted that a comprehensive traffic study of **US 322** (from the Commodore Barry Bridge to Route 55) is underway by Gloucester County, New Jersey DOT, and others The study is expected to yield projects for future TIP updates that will facilitate the flow of goods and people in the corridor.
- 15. The **Duck Island Remediation** project (#99334, Hamilton Township, Mercer County) will finance necessary improvements to this active landfill.

Finally, I would like to take this opportunity remind the relevant entities from the freight community to continue to work closely with the DVRPC member governments to ensure that the Congressionally-mandated projects found on the existing TIP are advanced in a timely fashion. These projects include: North Delaware Avenue New Roadway (#9740), Philadelphia Naval Shipyard Access (#9748), Tioga Marine Terminal Gate Improvements (#9749), and CSX Trenton Line Clearance Improvements (#0564).

Thank you very much for the opportunity to provide these comments on the candidate TIP projects and for continuing to incorporate goods movement planning considerations into the TIP development process.

Sincerely,

Kelvin MacKavanagh Chair, Planning Subcommittee Delaware Valley Goods Movement Task Force

Comments from Cit Municipalities, ar	

James Weinstein, Commissioner NJ Department of Transportation 1035 Parkway Avenue Trenton, NJ 08625

RE: Opposition to NJDOT "Final Alignment" of the Millstone Bypass, NJDOT D1.1C

Dear Commissioner Weinstein:

We share the dismay of many area residents over the current proposed alignment for the Millstone Bypass, which has been designed by the NJ Department of Transportation. We feel certain that there are alternatives to this disastrous proposal that take into consideration wide-reaching traffic patterns, the preservation of our diminishing parcels of open space, and the concerns of our neighborhoods. We urge the DOT to prepare a full Environmental Impact Statement as provided for in the National Environmental Policy Act. An EIS would require the study and evaluation of alternative plans to this route.

The proposed road would begin at the Princeton Junction train station, follow the Millstone River to Route 1, and then follow the Delaware and Raritan Canal to the intersection of Washington Road and the Canal. This 2.3 mile road has been proposed in an effort to eliminate three lights and thus speed traffic flow on Route 1 through the Penns Neck area. In addition, it is intended to decrease the amount of traffic on Washington Road in the same neighborhood.

The impact of this road as planned would be far-reaching and severe. Because the road would form a final link between the NJ Turnpike and Routes 206, 287, and the New York Thruway, there would be a drastic increase in traffic through the neighborhoods of East Windsor, West Windsor, and Princeton.

The road would cause permanent and profound damage to the environment of the Delaware and Raritan Canal, the Millstone River, and adjacent open space. It would cut through the open fields along the Canal, undermining their use as playing fields and grounds for the annual Hospital Fete. It would erode the tranquil quality of the whole towpath area, a recreational resource used by 650,000 people each year. Washington Road, the majestic link between Princeton and West Windsor since 1806, would be closed to through traffic, and 15 of the 60 elm trees forming the historic Elm Allee would be cut down.

This controversial alignment would bring permanent and extensive change to our neighborhoods. Therefore, we believe a full and complete review of environmental and community impacts is imperative at this time.

Sincerely,

arch 30, 2000

cc: Federal Highway Admin.

PETITION AGAINST THE PROPOSED MILLSTONE BYPASS

We, the undersigned, oppose the NJDOT alignment of the Millstone Bypass (NJ TIP #4311A), which, together with the Hightstown Bypass and the widened Route 571 (NJ TIP #1086), will extend the NJ Turnpike through West Windsor, Princeton, and surrounding communities. We demand a full Environmental Impact Statement (EIS).

The Millstone Bypass will:

- pass within 250 feet of the Millstone River;
- pass within 450 feet of the D&R Canal State Park;
- increase traffic and raise the noise level along the River and the Canal;
- impair the quality of drinking water in many NJ communities;
- encroach on acres of open space currently used for recreation;
- endanger the wildlife habitat;
- cut off direct access between West Windsor and Princeton via Washington Road;
- destroy one quarter of the historic Washington Road Elms.

PETITION AGAINST THE PROPOSED NJDOT EAST-WEST TURNPIKE EXTENSION PROJECTS

In order to maintain Princeton and the surrounding communities as tranquil yet vibrant residential, business, and academic environments, we the undersigned oppose the following NJDOT proposals, which together will extend the NJ Turnpike through West Windsor into Princeton, sending high-speed truck and automobile traffic into our communities and endangering pedestrian and bicycle access from residential neighborhoods to local area schools and businesses.

- 1. <u>We Oppose</u> the implementation of a high-speed, 4-lane Hightstown Bypass from the Turnpike to Route 571, at the border of West Windsor, which will impose dangerous high-speed tractor-trailer and automobile traffic on our community roads.
- 2. <u>We Oppose</u> the expansion of Route 571 to a 5-lane, high-speed highway from the West Windsor-Plainsboro High School to the Amtrak/NJ Transit railroad bridge, which will destroy existing small businesses and homes and prevent establishment of a "downtown" in Princeton Junction.
- 3. We Oppose the construction of the Millstone Bypass, which, with its elevated highway and 4-lane overpass, will destroy valuable wetlands and natural open areas, increase flooding in the Penns Neck neighborhood, and remove from guaranteed public access the historic and defining Elm tree-lined gateway to Princeton on Washington Road. Moreover, this Bypass will encourage the additional flow of traffic through Princeton onto Routes 206 and 27, eventually to major arteries, a traffic load which Princeton roads are inadequate to bear.

Sample Page over 700 signatures received

Tri-State Citizens' Council on Transportation 4315 Baltimore Avenue, Philadelphia, Pa. 19104

Charles Bode, Chairman

The Tri-State Citizens' Council on Transportation submits this document as its public comment upon the draft DVRPC TIP for FY 2001. We will first respond to several of the questions posed in Volume I of the TIP. We then propose specific additions and scope changes for the TIP. Our transit proposals are discussed in our Consolidated Statement for SEPTA's FY 2001 hearings. Rather than repeat that material, we enclose a copy of that document as part of our submission. The central theme of our Consolidated Statement is that public transportation needs to focus upon improving financial performance, which we again recommend here as the guiding light for transit project selection. This is a direct result of our Route Performance Trends Report which found sharply declining financial performance at SEPTA.

Questions Posed in Volume I of the TIP

Given the projects in the TIP, are we headed in the right direction?

No. The majority of projects in the TIP, directly or indirectly, will increase single occupant vehicle travel. Every project that increases capacity, removes constraints, or eliminates congestion is likely to increase the vehicle miles traveled. VMT, shown on page 2 of the conformity section of the TIP, is projected to increase from 109 to 129 million between 2002 and 2020, an 18% gain. Increased vehicle miles traveled equate to increased time behind the steering wheel, time that cannot be used productively either on the job or in recreation that clears the mind for improved job performance. Therefore, the TIP will increase the region's dependence on imported fossil fuel and decrease the region's competitive position.

We recommend that the scope of every highway project be revised to include specific measures to improve the conditions for people who walk, cycle, and ride transit. Specifically, every highway project should provide for sidewalks, bicycle lanes, and transit preference at traffic signals.

Example 1: TIP # B05 Woodbourne Road and Lincoln Highway Intersection Improvements: "Widening of both intersections to provide additional through lanes on Woodbourne Road, dual left turn lanes on East Lincoln Highway, right turn lanes on Old Lincoln Highway, and traffic signal upgrades." This project is likely to increase the speed of vehicles through the intersections. The roadways will be widened. More lanes of vehicles will be turning simultaneously. All of these changes make crossing the intersections more difficult and more dangerous for

pedestrians and cyclists. Where are the changes for pedestrians to safely cross the new intersections, the adequate crossing time in the light cycles, and the bicycle lanes?

Example 2: TIP # 9721 Torresdale Avenue Harbison Avenue to Linden Avenue: "...upgrading and interconnecting the traffic signals for approximately 29 intersections within the project limits. The improvement is intended to help accommodate the additional traffic that is anticipated during the rehabilitation of I-95." This project is likely to increase the speed of vehicles on Torresdale Avenue. This makes crossing the street more difficult and dangerous for pedestrians and makes drivers less tolerant of the transit vehicles that stop to receive and discharge passengers. Where is the transit preference in the signals? Where is the adequate time for pedestrians to cross? (Why do the lights usually change to stop walking before crossing even the first lane?) Where is the green-wave timing at a slow speed that is appropriate for a street lined with small businesses and homes?

Is the current transportation project development process, including environmental reviews and public input, effective?

No. A large portion of the funds is set aside for public transportation projects. However, the process for selection of public transportation projects is effectively closed to the public. When the list of projects, for example SEPTA's Capital Budget Proposal, is presented for public comment, it-like the TIP--is beyond the stage of being receptive to substantive change from the public. The futility of public involvement is conclusively demonstrated by the failure of efforts over many years of interested groups and individuals to have projects added, removed, or effectively modified. Public involvement is essentially a case of going through the minimal legal requirements without an intention of using the comments received to effectively change the proposals.

Given financial constraints, are we spending money on the right types of projects?

No. The decision process lacks cost-benefit analysis. Further, projects designed to reduce the need for funds through planning, non-construction programs, and education are absent.

Enclosed with our submission are two articles, *Highway Capital and Economic Productivity* and *It's the Regional Economy, Stupid! Misinterpreting the Benefits of Highway Construction*, from the February 1999 issue of Progress, the Surface Transportation Policy Project newsletter. The articles describe the minimal benefits from increasing highway capacity and how even those benefits are basically shifts from the portion of the region without the new capacity to the portion of the region with the capacity.

Example 1: The total financial picture includes the operating assistance for public transportation. SEPTA's farebox recovery ratio and ridership are both decreasing. This is increasing the burden on taxpayers for a declining benefit. Public transit projects should be designed to increase ridership and revenue while decreasing the operating assistance requirement.

Two large projects are projected to consume an enormous amount of funds. The likely result is an increase in the need for operating assistance. While they are at the extreme limits of project size, the same lack of an effective business-like decision process affects the entire project selection process.

Example 2: Numerous projects cite safety. The severity of injuries increases with the speed of the vehicles. Therefore, the most cost effective safety projects may be as simple as reducing the speed limit. Changing the speed limit signs is much less costly than any realignment, signal modifications, or other physical construction.

Example 3: The region is littered with "no pedestrian crossing" signs. What is a person expected to do at an intersection with "no pedestrian crossing" signs for every direction--fly? Effectively, life without constant use of an automobile has become illegal in much of the region. People are forced to move elsewhere or become motorists. Forcing people to use SOVs creates an artificial demand for expensive roadway capacity. Where is the TIP project to replace all the "no pedestrian crossing" signs with pavement crosswalk markings and "stop for pedestrians" signs?

Is the TIP document easy to use? How could it be improved?

Public understanding and, therefore, participation could be facilitated by the addition of two types of information:

The status of projects previously funded but no longer shown in the TIP, for example projects still under construction.

A description of projects proposed beyond the TIP period, including their relationship with projects in the TIP and with prior projects not yet completed.

This information may best presented in a document separate from the TIP, but made available concurrently with the TIP.

The TIP document itself could be improved with a table of contents listing the projects with the page number where the project appears in the document.

NJDOT Statewide Line Items

These items are described in only the most general manner. For example, the freight program could be highway, railroad, port, or airport facilities. For such vague projects an additional public comment process should be developed to obtain public input after individual project elements are developed before the elements reach the bid stage.

Specific Suggestions for Changes to the TIP

We recommend that a few projects, described below, be added to the TIP. Several are non-construction projects that are minor in scope relative to the typical TIP project. Others involve minor construction accompanied by a policy change. Only a few are of a sizeable nature. These larger projects would, of course, begin with various study phases so that the funding requirements within the TIP period are minor. We request that two projects be re-scoped. The reduction in scope of these two projects releases more than enough funding to cover all our other recommended changes, thus preserving the fiscally constrained nature of the TIP. A more extensive discussion of our public transportation recommendations is contained in our Consolidated Statement for the FY 2001 SEPTA hearings which is submitted with this statement.

Recommended new projects are as follows:

- ♠ A public education program to reduce congestion and pollution by encouraging walking and cycling for short trips. In a manner similar to the campaign to conserve energy some years ago in which office workers were encouraged to walk up one and down two floors instead of using an elevator, we suggest a "walk five [minutes], bike ten" in place of driving campaign. Elimination of many short vehicle trips could reduce traffic congestion in some locations much more effectively than constructing more lanes and adding evermore complicated signals.
- ◆ A study to develop a methodology to evaluate the cost-effectiveness of roadway segments and to develop a procedure to remove roadway segments not carrying sufficient traffic to cover their cost. In a manner similar to the process used by SEPTA to rank its routes, roadway segments could be evaluated for the ratio of gas tax revenue earned to operating and maintenance cost incurred. A minimum value would be set, below which, similar to SEPTA's routes, roadways would be abandoned if their usage could not be increased to produce sufficient tax revenue.
- A study to develop an effective means of consolidating responsibility for roadways. At present for example, a state highway within Philadelphia that is used by SEPTA's trolleys is maintained by at least four parties: SEPTA for the track area lanes, PennDOT for the non-track lanes, the City of Philadelphia for signs and pavement markings, and adjacent property owners for the sidewalks. Surely a process can be developed for "trading" such that the total

cost and work scope of each public entity was maintained, but that a single agency maintained all features of a given roadway segment. Even if PennDOT does not believe it can build track, PennDOT could trade parking lane paving to SEPTA in exchange for maintaining an equivalent amount of paving in SEPTA depots, parking lots, and other facilities.

A public education program to inform the public of the tradeoffs involved in the regional economy. Specifically the program would include:

The cost of sprawl in terms of travel time, highway costs, utility costs, and social impacts such as the need to chauffeur children to all activities and the associated loss of neighborhood feeling.

The alternatives that are possible from policies that:

Provide for increased use of transit effectively. Provide for increased use of walking. Provide for increased use of bicycles.

The likelihood of future higher-than-present gasolene prices resulting from additional automobile use in developing countries including China, Brazil, and India where large populations will consume vast quantities of gasoline.

The relative regional competitive position, both current and projected, relative to other regions, some of which are making efforts to increase time and energy efficiency through policies to curb sprawl and reduce vehicle miles traveled.

A study to establish guidelines for street-name sign location such that the signs are easily visible to passengers in transit vehicles. Numerous signs are now located too high to be seen by passengers not seated beside the windows. The recent trend to locate street-name signs only over the traffic lanes at intersections hides the signs completely from passengers in transit vehicles. Further, the highly tinted bus windows greatly restrict the passengers' ability to see the signs at night, especially those not well illuminated, small in size, or dark in color.

Guidelines would be developed to locate street-name signs at the height of bus windows, to make the signs large enough to read from the bus, and to coordinate street lights and street-name signs such that the signs are illuminated at night by the street lights.

A study to determine the cost savings resulting from a reduced severity of accidents that would be associated with a reduction in the speed limit on congested roadways and intersections. The cost of vehicle and property damage, the cost of police tending to accidents, and the cost of medical care for accident victims would be evaluated relative to

the number and severity of accidents at various speed limits to determine the appropriate vehicle speed limits for various typical congestion situations. Thereafter, the lowering of the speed limit could be evaluated against construction modifications to determine the least costly means to resolve certain traffic situations—construction or a lower speed limit.

- A program to replace "no pedestrian crossing" signs with "stop for pedestrians in crosswalk" signs and associated intersection modifications including striping and pedestrian crossing signals.
- A study to develop project guidelines such that every highway construction project includes provision for pedestrians and cyclists, specifically including sidewalks, bicycle lanes, and provision for pedestrians and cyclists to safely and conveniently move through intersections.
- A study to determine how traffic elimination can improve the region. An article, Remove It and They Will Disappear from Surface Transportation Policy Project newsletter of March, 1998 on this topic is included with our submission.
- A study to determine a means to reduce the subsidy per transit passenger. Points A through I in pages seven through fifteen of our Consolidated Statement are generally applicable to all the public transportation operators in the region. Other means may also increase ridership in such a manner that the requirement of subsidy decreases. The purpose of this study would be to determine appropriate means to increase ridership while decreasing subsidy and to develop a mechanism for applying the means within the region. A significant change in agency direction might result, for example, from a policy that the top managers' salaries be contingent upon deficit reduction and only payable from the annual reduction in the deficit.
- ♠ A program to increase the effectiveness of public participation in the TIP by means of instituting a process through which the public could initiate the inclusion, or removal, of a project directly through the DVRPC without the need to go through other government bodies. In view of the completed nature of the TIP document at the time of public review, this may require that the future TIP begin at the public review of the previous TIP so that projects from the public can be processed effectively. Also, this may require that DVRPC, as the regional MPO, occasionally become the sponsor and lead agency on a worthwhile project not accepted by another agency.
- The following public transportation projects which are described in our Consolidated Statement:

A scope change to TIP# SEP04 to advance the acquisition of new trackless trolleys.

An extension of trackless trolley Route 66 to Franklin Mills.

An extension of trackless trolley Route 29 to Grays Ferry Avenue.

An extension of trackless trolley Route 29 to Pier 70.

An extension of trackless trolley Route 79 to Pier 70.

An extension of the Market-Frankford Subway-Elevated line westward to the Blue Route. For purposes of the TIP, the portion of this project within the TIP time frame would be the initial studies.

A scope change to projects TIP# S053, S073, and 9791 to partner with other agencies to build a quality Girard Avenue Light Rail Line specifically with neighborhood revitalization as an integral part.

A University City Streetcar Loop.

A Center City Streetcar Loop.

An Erie-Torresdale Light Rail Line.

A Northwest [Philadelphia] Historic Trolley Route.

A scope change to the Bus Purchase Program (TIP# S025) to begin acquiring fuel cell buses, and to acquire buses with improved suspension, air conditioning, and announcement/signage systems.

A study to develop vehicles that can be maintained entirely within the overnight and weekend periods so that the number of vehicles can be reduced to just the number required to provide the service.

A change in scope for TIP# S031 and S074 to reflect the effect on the region of funding both the construction cost and the future deficits and to reflect the realities of a project outside the operator's demonstrated area of interest and competence. Specifically, a change from the proposed scope to a busway over the R6 right-of-way from 30th Street Station through Norristown to King of Prussia, a purchase of service contract for additional bus service between Philadelphia and Reading, an extension of the Erie-Torresdale Light Rail line, a shorter routing for the R8 train, and Breeze-type bus services. Within the time frame of this TIP this change of scope would involve the initial study and design of the revised facilities and the purchase of Philadelphia-Reading bus service.

FY 2001 Transportation Improvement Program

Volume IV
Public Comments and Agency Responses

Part C Compilation of Public Comments Pennsylvania Subregion

DVRPC Region	al Citizens C	Committee Comments
·		

COMMENTS OF THE DVRPC REGIONAL CITIZENS COMMITTEE REGARDING ADOPTION OF THE DRAFT DVRPC FY 2001 TRANSPORTATION IMPROVEMENT PROGRAM (TIP) FOR NEW JERSEY AND PENNSYLVANIA

The RCC recommends that the DVRPC Board approve the DVRPC Draft FY 2001 TIP for New Jersey.

The RCC also submits the following comments on the New Jersey TIP:

- 1. TIP#2374 (Delaware River Tram): The RCC continues to oppose the Delaware River Tram for the following reasons:
- a) There is no justification for the project;
- b) This project is tantamount to an amusement park ride;
- c) There is much concern about the operation of the tram in different weather extremes:
- d) DRPA should focus on its core mission which is to expand PATCO operations:
- e) The agency should be addressing other, more timely transportation issues.
- 2. TIP#4321 (Scotch Road/I-95 Interchange): The RCC continues to oppose this project.
- 3. TIP#2340A & B (I-295/76/NJ42 Missing Moves and Direct Connection): On the basis of safety concerns, the RCC supports the missing Moves and Direct Connection. However, the committee feels these projects should not move forward until transit is more thoroughly examined. As the RCC recommended in 1998, transit alternatives can significantly address the mobility pressures of the area: data in the Burlington-Gloucester MIS needs to be considered. Specifically, the alternatives to be studied should include:
- 1. Light rail and modified light rail (modified PATCO) alternatives to Mantua where the Camden-Glassboro freight line intersects Route 55.
- 2. Furthermore, Atlantic City Rail Line Improvements should include--
- a. The addition of one peak direction round-trip;
- b. Lessen travel time of each run by 20-35 minutes to what it was 50 years ago;
- c. Directly extend service to Suburban Station.
 In addition, the RCC encourages vigorous consistency with the New Jersey State Development and Redevelopment Plan, with particular emphasis on the transportation improvements listed above.
- 4. TIP#4313 (Route 29): The RCC continues its opposition to the Route 29

project and contends that the environmental review was inadequate.

- 5. TIP#4311 (Millstone Bypass): The RCC believes that action by the DVRPC Board on the Millstone Bypass is premature prior to completion of the Environmental Assessment or Environmental Impact Statement.
- 6. TIPDB#T300 (Transit Rail Initiatives): The extension of the Trenton to Camden line and extension of the PATCO Systems should be studied.
- 7. The RCC also questions why project costs for North Jersey are in the DVRPC TIP for this region.

In addition, the RCC recommends that the DVRPC Board approve the DVRPC Draft FY 2001 TIP for Pennsylvania.

The RCC also submits the following comments on the Pennsylvania TIP:

- 1. In general, arrangement of the TIP should be improved as follows:
- a. There is no index other than on maps;
- b. Maps give project numbers but not page numbers;
- c. Individual projects are not listed according to TIP number sequence;
- d. Related projects are scattered without cross-reference. One instance is the various Route 23 projects)TIP#8743, 8776 and M 06.
- 2. Opposition is highly likely on TIP#8743 (PA 23). This project would convert what is now a local residential street (Chelsea Drive) into a four-lane segment of Route 23. The area was assured years ago that the Route 23 project was permanently halted a mile west of Bridgeport. The RCC questions whether there has been community involvement in this project.
- 3. TIP#7879 (Chester Creek Bicycle/Pedestrian Trail): Trails should be in vicinity of rail not on the rail grade. Experience has shown that rail restoration is likely to be politically impractical if the trail is located on the rail grade.
- 4. TIP#D26 (McDade Blvd.): Traffic signals are to be pre-empted by buses at Darby Bus Terminal. The RCC supports this all too rare "Transit First" Initiative.
- 5. TIP#8475 (Church Road): Are sidewalks included in this bridge replacement?
- 6. TIP#8436 (Greenwood Ave.): Will sidewalks on the bridge replacement meet ADA standards?
- 7. TIP#8798 (Pennypack Connector Trail): The RCC again questions whether rail restoration would be politically impractical if the trail is located on the rail grade.

- 8. TIP#9746 (30th Street Station Intermodal Gateway): What direct, secure alternatives are proposed for the Market Street Subway to Surface Line connection to the Regional Rail at 30th Street?
- 9. TIP#0537 (Alternative fuel Project): The RCC supports and urges quick acquisition of hybrid buses.
- 10. TIP#PA01 (Amtrak Harrisburg Line): Does this include centralized traffic control, especially where SEPTA operates?
- 11. TIP#SO14 (Station Accessibility): The RCC supports accessibility but questions whether SEPTA has explored the interim strategy of making cars, rather than stations, serve as the critical element in ADA compliance (i.e., wheelchair lifts on each train instead of ramps on every platform).
- 12. TIP#SO30 (North Philadelphia Transportation Center): With the proposed discontinuance of the R-8 train at this station, how has this project been rescoped in terms of capital dollars?
- 13. TIP#SO60 (Rail Stations and Parking Program): See Attachment #1. The RCC believes that "market driven" pricing should be used; i.e., pricing for parking at different rail stations should be considered.
- 14. TIP#SO71 (Eastwick Transportation Center): The RCC reaffirms its position that ridership is not large enough to justify this expansion. The projected cost does not match the description of the project issued at the public hearing. Where are these additional dollars programmed?

The RCC urges the City of Philadelphia and SEPTA to refrain from spending any additional money in the next few years. The station lies in an isolated area. A park-and-ride lot at Eastwick would only duplicate parking spaces which exist in ample amount a few miles away at more visible and more secure locations on the Wilmington-Newark R-2 line. Some of these locations generate higher fares than Eastwick would; so any diversion would be economically unwise for SEPTA. An elaborate Eastwick Station costing several millions of dollars would only deflect scarce capital money from more productive uses. In addition to the capital cost, the added lighting, elevators, platforms, stairs, etc., would only add to the already high annual fixed-plant maintenance and operating costs of SEPTA's rail systems.

15. TIP#SO74 (Schuylkill Valley Metro): See Attachments #2. In addition, the RCC understands that there are two potential ultimate routes between Perkiomen Junction and Cromby (south of Royersford) for the Schuylkill Valley Metro project.

In order to determine which route would be best for the region and its

transportation system, the RCC recommends that an impartial study be done, identifying alternate construction costs, operating costs, travel time, passenger level, passenger revenue, cost recovery and other important factors. Such a study should not preclude the immediate start-up of service with currently available equipment.

- 16. TIP#SEP01 (Elwyn-Wawa Rail Improvements): The cost listed in the TIP (\$15 million) conflicts with the cost given at a recent SEPTA public hearing (\$41 million). Why?
- 17. TIP#SO80 (Paoli Transportation Center): See Attachment #3.
- 18. TIP#SEP03 (Regional Rail Car Acquisition): Customers' views should be sought openly through a public hearing before the design stage.
- 19. TIP#SO31 (Cross County Metro): The project description cites a Major Investment Study and Draft Environmental Impact Study -- neither of these have been released to the public and no locally preferred alternative has been issued. The RCC feels it is premature to program design dollars in FY 2001 and questions why the public has not been involved in the process on the same level as for the Schuylkill Valley Metro.
- 20. TIP#8601A (Betzwood Bridge): See Attachment #4. The RCC is seeking reassurance that this bridge replacement will be done correctly.
- 21. TIP#9555 (School House Lane): The RCC opposes the widening of School House Lane. If the project does move forward, the committee asks that "No Trucks" signs be posted.
- 22. TIP#9345 (Krewstown Road Bridge): The RCC opposes the construction of a new bridge at this location.
- 23. TI P#6719 (PA 41): The RCC asks why the funding levels in the later years of the TIP were changed for this project and who changed them. The committee also asks for a copy of comments made to the State Transportation Commission by the Chester County Commissioners relative to this project at the meeting of November 15, 1999.
- 24. TIP CSP (US 1 Expressway): The RCC notes that the quality of workmanship on this roadway is deplorable.
- 25. Bicycle Network Program (formerly TIP#9703): The RCC is disappointed that this project was removed from the TIP and questions the status of the project and the CMAQ funds that were allotted for the Plan.

Proposed RCC Separate Resolution on Parking Garages at Train Stations

Refer to TIP SEP10 Intermodal Facilities Improvements in Montgomery County

D#12)

Although RCC supports expansion of needed transit parking in general, we can only recommend against building expensive parking garages where public transportation management has failed to implement "soft" alternatives to major construction. Such would be the case at hub stations Jenkintown, Glenside and perhaps Norristown and Conshohocken.

In the case of adjoining Jenkintown and Glenside stations, over 260 parking spaces go unused at the nearby stations of North Hills, Oreland, Noble, Rydal, and Meadowbrook. Moreover, additional SEPTA-owned land is available at the five nearby stations, which is not the case with Jenkintown and Glenside.

Lacking are managerial efforts to divert "drive in" customers from the areas near the outlying stations to use those stations with their ample parking instead. Using pricing and other methods to divert customers away from scarce commodities is just normal management practice. In this instance, management could adjust parking fees at individual stations upward or downward. It could also adjust the number of stopping trains at each station upward or downward.

Streets around Jenkintown and Glenside, particularly Glenside Avenue, already are congested at peak commuting hours. Further increase of parking at these stations can only exacerbate this problem. By contrast, traffic generally moves freely around the other stations.

RCC urges that this project be deferred, but that if more parking eventually is needed in the area, it be accomplished at the outlying stations. RCC also urges DVRPC staff to screen all projects for the possibility that "soft" alternatives to construction may exist which will reduce the pressure on limited public transportation capital funding.

HICKERINEN IT &

SCHUYLKILL VALLEY METRO PROPOSAL CONCLUSIONS

10#12

This proposal is meant to modify or replace SEPTA's Schuylkill Valley Metro Alternative 2D, which ii somewhat resembles. Many changes to Alternative 2D would be needed, not all of which are known; details of SEPTA's alternatives are still sketchy.

The planning process should:

- a. Proceed in a more democratic fashion, including public hearings now and at regular intervals;
- b. In order to avoid deceiving the casual reader, clearly describe the alternatives and state the costs of all elements in each alternative;
- c. Delete from the study the light-rail add-ons that confuse the costs and details of the main Schuylkill Valley corridor;
- d. Recognize that the Delaware Valley's unserved transportation market, not urban-transit theory or special-interest motivations, should determine the course of planning and action;
- e. Direct emphasis away from cheap fares, unsupportable service frequencies, etc., and toward transportation values which most passengers will pay more for;
- f. Attract passengers out of automobiles instead of diverting them from existing through buses;
- g. Provide a comfortable ride for the 90-minute trip to Reading;
- h. Utilize the Norfolk Southern main line without deviations;
- Avoid creating two more tracks entering Center City which will have to be maintained, and make better use of the 20 existing commuter rail, rapid transit, and light rail tracks already in place;
- Avoid establishing the seventh physically incompatible rail system here in addition to the present three light rail, two rapid transit, and one commuter rail systems;

If our proposal is followed, we believe that extension of an enhanced commuter rail service will provide the Schuylkill Valley with the best transportation improvement at lowest capital cost per passenger mile. Service levels will tailored for the various ridership levels en route, and variations by time of day and week. An attractive service with well-patronized trains will operate at low, affordable levels of operating subsidy from SEPTA and BARTA.

Attochment #3

PAOLI TRANSPORTATION CENTER RESOLUTION (adopted 4/97):

- ♦ Because of the large cost estimate for this station (\$34 million), in comparison to other large public transportation needs, the RCC urges that the cost of the public transportation segment of this project, including CMAQ funds, not exceed a small fraction of the total figure.
- ♦ Any other funding for this project should come from highway or private sources.
- The present station site is suitable, and existing facilities should be used as much as possible for the sake of economy. If desirable, the present station platforms should be extended a short distance westward. Parking and other improvements should be made in a cost-effective manner.
- Replacement of the present Valley Road overpass with a wider bridge or underpass, including sidewalks on both sides which are accessible to station platforms, is an essential part of the plan, and should be added to the project.
- Nearby stations from Devon to Whitford urgently require station-building, platform, lighting, and pedestrian safety capital improvements.
- The RCC further recommends that a project for installing centralized traffic control and revising the track arrangement on Amtrak's Harrisburg Line between the Overbrook and Thorndale areas be added to the TIP. This would be a highly productive improvement. It should be actively pursued by SEPTA and Amtrak, the Paoli Transportation Center: which should share in its capital cost and in its resulting operating cost savings.

Attachment #4

Proposed RCC Separate Resolution on Betzwood Bridge Area TIPs

Refer to TIPs: 8601 on p. 118 Old Betzwood Bridge Replacement

8601B on p. 119 Old Betzwood Bridge Bike and Pedestrian Trail

8660 on p. 210 US 422 Off Ramp at Route 363 Trooper Road

8661 on p. 119 Signalization at Route 23 at Old Betzwood Bridge 8703 on p. 126 Schuylkill Trail from Betzwood Bridge to Route 29

8776 on p. 141 Routes 23 and 422 Interchange

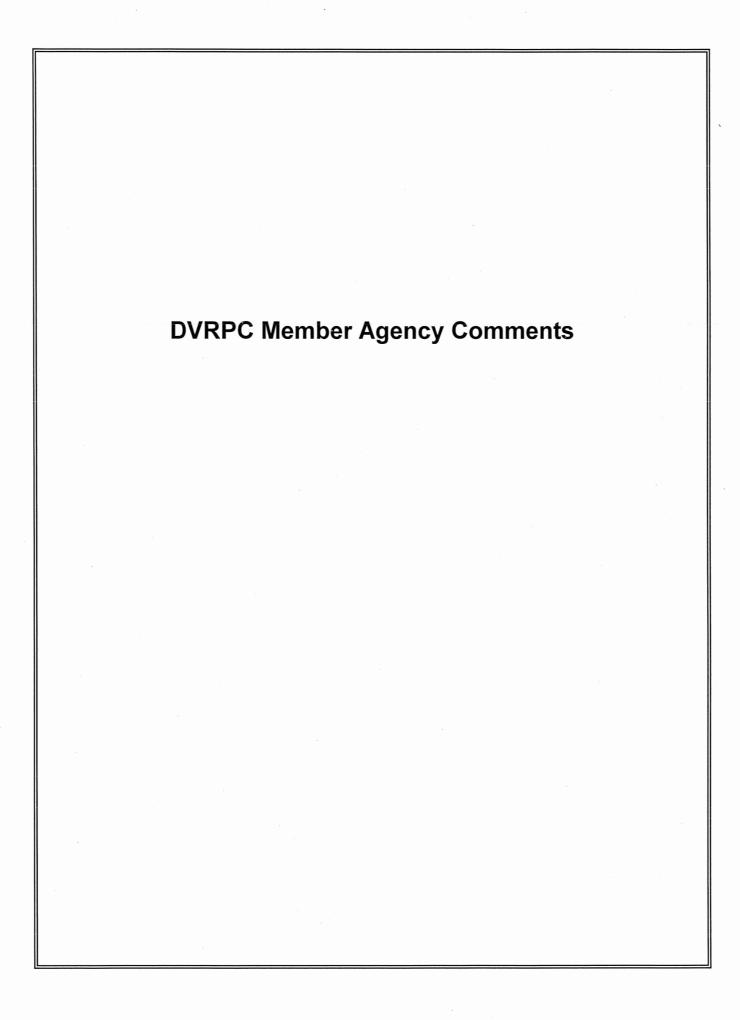

SO 74 on p. 24 Schuylkill Valley Metro

Some years ago, the superstructure of Old Betzwood Bridge was dismantled. The now-congested, adjacent route 422 bridge replaced it without properly serving local motor traffic, pedestrians, and the existing and planned complex of bike and pedestrian paths nearby. The old bridge was much used by rail and route 125 bus reverse commuters to reach the Valley Forge corporate center on the river's north bank.

At the south-bank hub of this activity, Valley Forge Park train station still stands. It was rated by SEPTA in 1979 as having 150 parking spaces, which could be finished and expanded. A nearby apartment complex is linked to the site by a much-used pedestrian path. The Valley Forge Park visitors' center is located a half-mile south.

RCC therefore recommends that:

- (1) the various TIPs be coordinated.
- (2) approaches to the new Betzwood Bridge be designed to discourage long-distance traffic and to accommodate only local vehicular traffic, pedestrians and bicyclists.
- (3) the Valley Forge Park train station be developed as the principal train station for both north-bank and south-bank communities instead of the isolated, proposed Port Kennedy site one-half mile east next to a sewage disposal plant.

DELAWARE VALLEY REGIONAL PLANNING COMMISSION

The Bourse Building, 111 South Independence Mall East Philadelphia, PA 19106-2515

Telephone: (215) 592-1800 Fax: (215) 592-9125

www.dvrpc.org

June 22, 2000

Mr. Charles Dougherty Delaware Valley Regional Planning Commission 111 S. Independence Mall East Philadelphia, PA 19106

Dear Mr. Dougherty:

Attached, please find a new project application form to implement Intelligent Transportation Systems (ITS) Institutional Coordination technology to be considered for inclusion in the Delaware Valley Regional Planning Commission's (DVRPC) Fiscal Year 2001-2004 Transportation Improvement Program (TIP).

This is a phased concept to implement a technology for institutional coordination of ITS in the Delaware Valley. This project provides the region's ITS stakeholders with opportunities to share and disseminate information on travel conditions and coordinate the regional deployment of ITS systems in the Delaware Valley. DVRPC staff has presented this project to the executive staff at PennDOT, and NJDOT. The project was endorsed by the Delaware Valley ITS Coordinating Council, a policy level body representing the region's ITS stakeholders, and will be sent to the DVRPC Board for inclusion in the region's Long Range Plan. This project is consistent with US DOT's National ITS Architecture and with the Delaware Valley's Regional ITS Architecture.

If you need any further information, please contact me.

Sincerely,

Donald S. Shanis, Ph.D.

1 hald S. Sla

Associate Director

Transportation Planning

DVRPC TRANSPORTATION IMPROVEMENT PROGRAM (TIP) New Project Application Form (Form Revised 01/07/00)

(Type in the space provided.)

COUNTY:

Regionwide

PROJECT TITLE:

ITS Institutional Coordination (PRIMIS)

PROJECT LOCATION:

Region

MUNICIPALITIES:

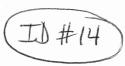

Various

DESCRIPTION OF IMPROVEMENT: This three-phase project implements a Philadelphia Regional Integrated Multi-modal Information Sharing (PRIMIS) concept to provide a framework for institutional coordination of ITS in the Delaware Valley. This framework provides the region's ITS stakeholders opportunities to share and disseminate information on travel conditions and coordinate the regional deployment of ITS systems in the region.

The first phase is envisioned as an initial low-tech, non capital intensive approach to building the relationships among the stakeholders necessary for effective coordination. In this phase, DVRPC will establish and provide staff support for a formal ITS committee composed of the region's ITS stakeholders. This phase applies a proactive approach to improving the information flow between agencies. Missing linkages between agencies will be identified and this will help to develop better mechanisms or procedures to enhance the communication framework. An extensive list of contact names and phone numbers will be prepared by DVRPC and provided to all the stakeholders. The ITS committee will also be involved in creating an outreach program where they would sponsor workshops, agency tours and training classes. These workshops will be aimed at both the planning and operating agency personnel to obtain a better understanding of the data received from other organizations, discuss mutual problems of data collection, and disseminate sensitive data. The goal of this phase is to improve and enhance the information sharing among ITS stakeholders, increase the number of stakeholders sharing information on travel conditions and provide the necessary training to bring all the stakeholders to at least a minimum technological level. The result will be improved communications.

Phase II represents a concept that utilizes and focuses the I-95 Corridor Coalition's Information Exchange Network (IEN) to facilitate communications using a computer message/digital message system to notify agencies about incidents or unusual conditions that affect them. The information will be used to support coordinated transportation management through a component of the I-95 IEN that is focused on the Delaware Valley. The I-95 IEN will be modified to increase the number of transportation facilities in the Delaware Valley and increase accessibility to the IEN by additional organizations. Workstations will be located at operations/control centers or other designated stakeholder sites. The workstations could be connected to one another via the I-95 Corridor Coalition's wide area network (WAN). Each agency would provide local information via their workstation. The workstations handle the transport of agency data (via the communications network) to a regional server(s) where it is combined with data from other agencies. The regional server(s) then distributes the regional/corridor information to each agency for display on their IEN workstation. Extensive training is envisioned for all personnel operating an IEN workstation.

(Type in the space provided.)

Phase III represents an enhancement over the IEN by incorporating an interactive database and graphical interface to view congestion levels, incident information, and video feeds from various partners. Besides information sharing, the wide area network will provide a mechanism for operating agencies to confidentially share information and request assistance from each other. From a communications perspective, the interactive database will use internet protocols and off the self software to transmit and store information including graphics, database updates, video feeds, and e-mail messages. At each agency's workstation translation software will merge individual agency databases into the regional database. A website with real-time regional travel information and condition data will be developed and extensive training will be provided for all organizations.

DVRPC Staff

DVRPC has been working with many of the ITS stakeholders through the Delaware Valley ITS Coordinating Council and the Delaware Valley ITS Technical Task Force (TTF) to develop a Regional ITS Architecture which is consistent with the National ITS Architecture. The framework for implementing a Philadelphia Regional Integrated Multi-modal Information Sharing (PRIMIS) concept was developed with extensive input from the Technical Task Force. The proposal was presented to the executive staff at PennDOT and NJDOT.

What evidence of local support currently exists for the project (city/county plan/budget, etc.)?

A presentation was made to the DVRPC Board and there were no negative comments.

June 19, 2000

Charles Dougherty, Associate Director Delaware Valley Regional Planning Commission The Bourse Building 111 South Independence Mall East Philadelphia, PA 19106-2515

Dear Mr. Dougherty:

The staff of the Chester County Planning Commission has reviewed the Draft FY 2001-2004 Transportation Improvement Program (TIP). The following are revisions we are requesting for two projects in Chester County.

We request that TIP# 6907 (PA 100: Eagle Bypass) from the FY 1999-2002 TIP be replicated in the FY 2001-2004 TIP. Although 100 percent local funds will complete Phase I of the project over the next four years, we feel it is necessary for it to remain on the TIP. This project has strong municipal momentum and legislative support.

We request that the following be added to the project description for TIP# 6719 (PA 41: Delaware State Line to PA 926). Actual cost estimates for construction will be determined with the completion of the Environmental Impact Statement (EIS). The value expressed in the "Later Fiscal Years (FYs)" is not a commitment, nor an allocation, nor a decision on an alternative. The cost estimates for the construction phase serve more as a public notice of potential costs for future budgetary purposes.

If you have any questions regarding the above comments, please contact Lee Whitmore at 610-344-6285.

Sincerely

William H. Fulton, AICI

Executive Director

Delaware Valley Goods Movement Task Force

Data Subcommittee

Planning Subcommittee

Shippers Subcommittee

Delaware Valley Regional Planning Commission

March 31, 2000

FY 2001 TIP Comments DVRPC Public Affairs Office The Bourse Building 111 South Independence Mall East Philadelphia. PA 19106

Attn.: Mr. Charles Dougherty

Dear Mr. Dougherty:

On behalf of the Delaware Valley Goods Movement Task Force's Planning Subcommittee, thank you very much for permitting many members of the Task Force the advanced opportunity to review the candidate new projects from the preliminary draft working editions of the New Jersey and Pennsylvania highway program portions of the FY 2001 Transportation Improvement Program (TIP). As you know, the Planning Subcommittee takes its periodic review of the TIP very seriously and has been performing this function on behalf of the local goods movement community for the past several years.

The following comments regarding the candidate new projects are offered from the perspective of emphasizing the goods movement aspects of the TIP and of maintaining the region as an international freight center. The comments about the project sets result from a meeting of the Planning Subcommittee (in conjunction with the Data and Shippers Subcommittees and the Traffic Club of Philadelphia), discussions with DVRPC member government representatives (i.e., the state departments of transportation, the cities, and the counties), and DVRPC staff research. These comments will be summarized for the full Delaware Valley Goods Movement Task Force at its April 12, 2000 meeting.

- 1. Several of the candidate highway improvements which are noted below will spur economic activity and goods movement in the region. It is suggested that these projects, which can be regarded as the Goods Movement Task Force's priority new TIP projects, be packaged together and promoted by DVRPC to demonstrate the region's use of transportation funding for economic development and freight transportation purposes.
- 2. The proposed truck climbing lane on **Route 232** (#B06) in Wrightstown Township, Bucks County will greatly benefit quarry-related truck traffic, safety, and traffic flow in the corridor.

- 3. Construction of the **French Creek Parkway** (from PA 113 to Bridge Street in Chester County) (#C01) is an important ingredient in the redevelopment of the former Phoenix Steel site. More than 5,000 jobs may be created in this mixed use development. The resultant development will generate significant demand for freight services, and bolster population and consumer demand in the Phoenixville area.
- 4. **The I-95/US 322 Interchange Improvement Study** (#D23, Delaware County) should include explicit consideration of the nearby CSX Twin Oaks automobile terminal. The Twin Oaks facility is a large truck trip generator, is served by a National Highway System connector (i.e., Bethel Road), and has been a part of DVRPC's intermodal management system (IMS) work.
- 5. **The Lloyd Street Bridge Replacement** (#D21) and **Chester City Access Improvements** (#D25, Delaware County) are vital projects. They can capitalize on the widening of the Industrial Highway (PA 291), further spur economic activity in Chester, and reinforce efforts to fulfill Chester's designation as a DVRPC *Revitalized Center*. (Note: DVRPC is also currently performing an *I-95 Access Study in the Chester Area—Phase 1*.)
- 6. The removal of the **PA 29** bridge and overpass filling at the rail line in Pennsburg and Red Hill Boroughs (#M01, Montgomery County) could prevent future use of the rail line south of where it currently operates. The Penn Eastern Rail Line from Emmaus (Lehigh County) now ends in Pennsburg. It is strongly recommended that it be confirmed that there is no potential future reuse of this line for rail freight shipping purposes and that the line is, in fact, formally abandoned. Furthermore, it is recommended that all future candidate TIP projects be *red-flagged* when they entail severing a rail line and that these potential projects be brought to the attention of the Delaware Valley Goods Movement Task Force.
- 7. Two projects in Montgomery County will facilitate more intensive commercial uses of riverfront areas along the Schuylkill River. They are: the road extension of **Lafayette Street** in Norristown (#M05), and the **Keystone Boulevard** (#M09) new roadway in Pottstown.
- 8. A primary objective of the **Upper Perkiomen Industrial Access Project** (#M07, Montgomery County) is improved truck access.
- 9. The Pennsylvania Turnpike ramp modifications at the **Lansdale Interchange** (#M16, Montgomery County) are a necessary part of overall improvements for facilitating truck movements to and from economic activity located near the interchange. The Planning Subcommittee wishes to emphasize the sensitive nature of ramp geometry for accommodating truck movements and urges the careful use of adequate design standards for all future ramp projects.
- 10. The retention of a **Design Review Manager for I-95** (#P23, Philadelphia and Bucks County) is critical. I-95 is one of the most important highways for commercial traffic in the region and it was recently recognized in the Commonwealth of Pennsylvania's

Statewide Long Range Transportation Plan (Corridor 1: The Delaware River Intermodal Corridor). Designating a design review manger can help speed improvements to I-95 and provide project consistency.

- 11. In Philadelphia, another important project which should be added to the candidate project list is the **Delaware Avenue Extension** from Richmond Street to Allegheny Avenue. This improvement would better serve truck traffic flows along Delaware Avenue and it would also afford an elongated detour route to I-95.
- 12. The construction of the **Haines Industrial Park** (#891) in Florence Township (Burlington County) is a major economic development project which will require highway access improvements. The related construction of a new interchange of the New Jersey Turnpike and US 130 is nearly completed.
- 13. **Route 55** interchange improvements at Deptford Center Road (#9332, Deptford Township, Gloucester County) will greatly facilitate traffic flows and commercial activity in the Deptford Mall area.
- 14. For informational purposes, it is noted that a comprehensive traffic study of **US 322** (from the Commodore Barry Bridge to Route 55) is underway by Gloucester County, New Jersey DOT, and others The study is expected to yield projects for future TIP updates that will facilitate the flow of goods and people in the corridor.
- 15. The **Duck Island Remediation** project (#99334, Hamilton Township, Mercer County) will finance necessary improvements to this active landfill.

Finally, I would like to take this opportunity remind the relevant entities from the freight community to continue to work closely with the DVRPC member governments to ensure that the Congressionally-mandated projects found on the existing TIP are advanced in a timely fashion. These projects include: North Delaware Avenue New Roadway (#9740), Philadelphia Naval Shipyard Access (#9748), Tioga Marine Terminal Gate Improvements (#9749), and CSX Trenton Line Clearance Improvements (#0564).

Thank you very much for the opportunity to provide these comments on the candidate TIP projects and for continuing to incorporate goods movement planning considerations into the TIP development process.

Sincerely,

Kelvin MacKavanagh Chair, Planning Subcommittee Delaware Valley Goods Movement Task Force

JOHN E. PICKETT, AICP DIRECTOR

June 15, 2000

Mr. Charles Dougherty Associate Director Transportation Planning Division Delaware Valley Regional Planning Commission The Bourse Building, 8th Floor 111 South Independence Mall East Philadelphia, Pennsylvania 19106-2582

Dear Mr. Dougherty:

I am writing to comment on the draft FY 2001-2004 Transportation Improvement Program for Pennsylvania. Delaware County fully supports the projects that are in Delaware County, especially high priority projects such as Route 291 in Chester, Route 322 Conchester Road, Route 252 at the Rose Tree Tavern, Elwyn to Wawa Rail Improvements, and Media/Sharon Hill Trolley Grade Crossing Improvements.

I have the following comments to offer so the draft TIP can be revised prior to **DVRPC** Board action:

- Route 202 (Section 100) is listed under Chester County but not Delaware 1. County. This project is approximately half in Chester County and half in Delaware County. It would make sense to include the same project under Delaware County and to split up the funding between the two counties appropriately. If the cost split cannot be approximated at this time, then leave all the costs in Chester County with a note in the Delaware County project referencing the cost under Chester County. The Delaware County municipalities in which the project is located are Chadds Ford, Concord, Thornbury, and Bethel Townships.
- 2. We endorse PennDOT District 6-0's proposal to revise the limits of TIP project 7897, a Baltimore Pike signal improvement project. The western limit should be changed to Bishop Avenue. The description should be changed to "Traffic Signal Interconnection" from "Corridor Optimization."
- We endorse PennDOT District 6-0's proposal to consolidate the Chester Pike 3. and MacDade Boulevard signal improvements. Project 7896, Chester Pike Morton Avenue to 11th Street, should incorporate projects D02 (US 13, Sharon

Mr. Charles Dougherty June 13, 2000 Page 2

Hill Closed Loop) and D26 (MacDade Blvd. Closed Loop). These latter two projects should be dropped from the TIP. Project 7896's name should be changed to US 13 Chester Pike/MacDade Boulevard, the limits should be Morton Avenue to Wycombe Avenue, the description should be Traffic Signal Interconnection, and the costs should be revised to reflect the new limits, with elimination of the local share that was in D02 and D26. The detailed description should include reference to the ability of SEPTA buses to preempt adjacent signals when exiting the Darby bus terminal from the proposed exit driveway onto MacDade Boulevard (see project D26 description).

- 4. We endorse PennDOT District 6-0's proposal to combine projects 7883 and D23 (Highland Avenue Extension and I-95/US 322 Interchange Improvement). These two projects overlap and construction of the Highland Avenue Extension in its originally-proposed location is no longer feasible. The new project could be titled I-95/Conchester Highway Access Study. The boundaries of the study area would likely be I-95, US 322/Conchester Highway, Concord Road, Duttons Mill Road, and PA 452/Pennell Road. The boundaries will be determined by PennDOT District 6-0 in conjunction with DCPD and local governments. The purpose of the study would be to recommend solutions for (1) improving access to I-95 and US 322 from 3 industrial parks north of I-95 and the CSX Twin Oaks Automobile Intermodal Facility and (2) providing a safer interchange of I-95 and US 322 Conchester Highway.
- 5. The description of project 7885 (US 13 Signal Modernization) should be expanded to include 3 signals on Kerlin Street in the three blocks adjacent to US 13 between US 13 and I-95. This will greatly improve traffic flow on Kerlin Street, US 13, and the ramps getting on and off of I-95.
- 6. In the description of project D15 (Convent Road), the words "County-owned" should be inserted after "The existing" in the first line.

Thank you for your consideration of these comments. If you have any questions, please contact me or Thomas P. Shaffer, Manager of Transportation Planning.

Very truly yours,

John E. Pickett, AICP

Director

Subject: FY01 TIP

You may wish to include the following transit projects for inclusion in the TIP:

Vol. II - New Jersey Subregion

West Trenton Line Corridor - NJ TRANSIT is completing a conceptual design and an Environmental Assessment (EA) for restoration of service on CSX's West Trenton Line. This service would run between West Trenton (Ewing Twp.), where connections can be made to/from SEPTA R3 trains, and Newark. This non-electrified line would join NJ TRANSIT's Raritan Valley Line in Bridgewater Twp. (Somerset County) and continue northeastward to Newark. Planning is under the auspices of the North Jersey Transportation Planning Agency, but since it is proposed to serve four stations in Mercer County [West Trenton, Route I-95, Marshall's Corner, and Hopewell], it should probably be included in our TIP as well. To date, Congress has appropriated \$2.48M in New Start funds for the project. It is expected that the EA should be completed by July 2000.

Vol. III - Pennsylvania Subregion

Roosevelt Boulevard Corridor - The Philadelphia City Planning Commission, in conjunction with SEPTA, is conducting a Transportation Investment Study (TIS) for extending rail transit service to northeastern Philadelphia. Funding for the study was provided through FHWA's Surface Transportation Program under its Urban Area Allocation.

Quakertown/Stony Creek Rail Restoration - The Bucks County Planning Commission, in conjunction with the Montgomery County Planning Commission, SEPTA, and DVRPC, is examining the feasibility of restoring rail passenger service to the Quakertown [Shelly (Richland Twp.) to Lansdale] and Stony Creek [Lansdale to Norristown] branches. The study has been funded through an FTA Technical Study Grant.

Dear Mr. Dougherty:

Subject:

FY 2001-2003 TIP – Draft for Public Comment (TIP #B09; MPMS #57628)

Sycamore Street, Newtown Township, Bucks County

On behalf of Newtown Township, I wish to thank you for the Commissions' inclusion of our Sycamore Street project on the 2001-2003 Draft TIP. Newtown Township is actively pursuing its design obligation and looks forward to the transformation of Sycamore Street.

We did note construction funding for the project is slated for FY 2003. At this time, we believe we will be ready at least a year earlier. Should you see fit to accelerate the funding in the TIP, please do so.

Again, thank you for your assistance.

Very truly yours,

Re: Draft DVRPC FY 2001-04 Transportation Improvement Program/ PADOT First Four Years of the 12-Year Transportation Program

Dear Mr. Dougherty:

Thank you for providing the opportunity to comment on the referenced draft program. We are pleased that many of Lower Merion Township's capital needs will be addressed within the next four years. I would like to take this opportunity to encourage the addition of one additional economic development-related project that was submitted last December for your consideration the Rock Hill Road and Belmont Avenue Corridor Improvement project.

Located adjacent to a regional highway, this is a critical gateway poised for resurgence. Presented with significant market pressures, the Township recently undertook a detailed urban design/planning study to analyze the specific effects of potential new commercial development upon the existing infrastructure. Several capital improvements are needed to mitigate existing traffic congestion, add capacity for future growth and economic development, enhance environmental conditions and improve community amenities. These include:

- > Upgraded traffic signals and intersection widening to provide auxiliary lanes at two intersections,
- The widening of Rock Hill Road and Belmont Avenue to provide additional through lanes, bicycle lanes, sidewalks and streetscape improvements, and
- Modification of the existing I-76 and railroad overpasses to facilitate additional lanes on Belmont Avenue in the vicinity of the I-76 interchange.

Funding levels are recommended as follows:

Description	Local Share	PennDOT Share	Total
Design	\$1.7 million	\$-0-	\$1.7 million
Right-of-Way	\$1.3 million	\$-0-	\$1.3 million
Construction	\$1.3 million	\$5.2 million	\$6.5 million
	(20%)	(80%)	
Total	\$4.3 million	\$5.2 million	\$9.5 million

TIP Comments June 22, 2000 Page 2 of 2

The local share for this project will be provided through the adoption of a transportation services area district, where developers pay assessments based upon the square footage of new development. Because of the current market pressure for development in this area, PennDOT funding in 2002-2004 is essential. Otherwise, the Township will miss the opportunity to take advantage of the significant private sector contributions envisioned through this public/private funding initiative. Attached is an excerpt from the study that provides additional details.

I would also like to bring to your attention what we believe are two errors.

- Project/TIP #8436 Greenwood Ave. Bridge. This project is listed as being in Lower Merion Township. This appears to be incorrect. We know of no such bridge in Lower Merion.
- 2. **Project/TIP** #8695 River Road Bridge. This project is listed as being in Upper Merion Township. This appears to be incorrect. We believe that the River Road Bridge over Mill Creek listed in the draft Transportation Program is actually located in Lower Merion Township.

Thank you for your consideration of this additional request. Should you have any questions or require additional information, please feel free to contact James T. Stevenson, our Economic Development Specialist at (610) 645-6184.

Sincerely,

David C. Latshaw Township Manager

To: TIP Comments

DVRPC Public Affairs Office

Sub: Draft DVRPC FY2001-04 Transportation Improvement Program/

PADPT First Four Years of the 12-Year Transportation Program

From: State Representative Connie Williams

149th Legislative District

The following are areas of concern in the municipalities of the 149th Legislative District

Upper Merion Township

Sound barriers on North side of Schuylkill Expressway: The residents of Weadleytown Road and Weadley Road on the north side of the Schuylkill Expressway have expressed concern that no sound barriers on their side of the expressway are included in the current project for barriers on the south side in the Bob White Farms area. I ask that every consideration be given to sound barriers on the north side for the short distance near Weadley and Weadleytown roads that this project would entail.

West Conshohocken

Route 23 and Balligomingo Rd. Intersection: This project to realign the referenced intersection is of great importance to the residents of West Conshohocken, as well as to those motorists who use these roads on a daily basis. Everyone is pleased that the project is scheduled for the near future. The potential for accidents is very high in the current configuration. The sooner this project can be completed, the safer everyone will be.

<u>I-476 from Chemical Rd to I-76; reconstruction:</u> The reconstruction of I-476 is an opportunity to install sound barriers along the residential sections in West Conshohocken. I, along with the residents of West Conshohocken, ask that sound barriers be included in this project.

June 22, 2000 DVRPC Public Affairs Office P.2

Lower Merion

Route 30 and Haverford Station Road: The proposed widening of this intersection is of great concern to the residents and businesses. A comprehensive traffic study regarding this area is near completion. I would hope that no decision would be made before this study can be reviewed. In addition, since the speed limit on this section of Rt.30 has been reduced from 35 mph to 25 mph, the number of accidents has decreased.

June 23, 2000

TIP Comments To:

DVRPC Public Affairs Office

Sub: Draft DVRPC FY 2001-04 Transportation Improvement Program

From: State Representatives Connie Williams 149th Legislative District

I would like to include the following concerns for the draft program

TOWNSHIP OF LOWER MERION

TOWNSHIP ENGINEER

75 E. Lancaster Ave. Ardmore, Pa. 19003-2376 Telephone: (610) 649-4000 TDD: (610) 645-6277

MONTGOMERY COUNTY

LOWM 0800-157.10

December 30, 1999

WRITTEN TESTIMONY FOR THE 2000-2012 TWELVE YEAR TRANSPORTATION PROGRAM LOWER MERION TOWNSHIP, MONTGOMERY COUNTY PROJECTS

Lower Merion Township is a community of 58,000 residents and assorted businesses located northwest of the City of Philadelphia. The Township occupies a land area of 24 square miles with over 250 miles of public roads of which 84% are Township Roads. In addition, the Township is traversed by four (4) major rail lines. Included in this major transportation network are many of the Delaware Valley's most critical and heavily traveled transportation arteries including:

- Schuylkill Expressway (I-76)
- Mid-County Expressway (Blue Route, I-476)
- City Avenue (U.S. Route 1)
- Lancaster Avenue (U.S. Route 30)
- Conshohocken State Road (State Route 23)
- Haverford Avenue (State Route 3044)
- Belmont Avenue (State Route 3045)
- Spring Mill Road (State Route 320)
- AMTRAK's New York to Chicago Main Line
- SEPTA's Ivy Ridge Line
- SEPTA's Philadelphia and Western Line Red Arrow
- Norfolk Southern Railroad (formerly Conrail's Main Line)

Although certainly beneficial to the Township's residents, this extensive transportation network, in particular the major north/south and east/west arteries, provides significant benefit to the entire Delaware Valley. The costs to Township residents, however, extend far beyond the obvious financial burden and include the detrimental effects of air and noise pollution, increased stormwater runoff, traffic congestion and the associated police burden. Without the continued financial support of the state and federal governments in maintaining and upgrading the roads and bridges that are integral to this transportation network, the residents of Lower Merion Township will be subject to a disproportionate share of this burden. Given the present demands on tax revenues at all levels of government, any increase in burden at the Township level will most certainly be difficult to fund out of local taxes and may result in a deterioration of current conditions.

We are especially concerned about the current condition, funding, and scheduled replacement of three (3) key bridges over AMTRAK's New York to Chicago Main Line that bisect the Township along an east-west axis. These bridges, all of which are located in areas of intense residential and commercial development, are critical transportation elements linking the north and south segments of the community divided by this formidable physical barrier. Since the demise of the Penn Central Railroad in 1970, the financial responsibility for many infrastructure components has fallen to the taxpayer. The replacement

LOWM 0800-157.10

Page 2

NO. 006

December 30, 1999

of these bridges have higher than normal costs because of special railroad insurance and construction requirements, railway electrification modifications, restrictive working conditions, and right-of-way acquisition. In addition, Union Avenue over SEPTA and River Road over Mill Creek are two (2) additional orphan bridges programmed for replacement that are critical elements in the Township's road network and of special concern.

Therefore, we strongly recommend continued support, and in some cases increased funding (based on current estimates) for the following projects:

Church Road Bridge over AMTRAK's Main Line - Existing Project

This ±70-year old, severely deteriorated steel and concrete bridge carried over 5,000 vehicles per day across AMTRAK's Main Line in the heart of the Ardmore business district. It was constructed using steel girders from another bridge originally constructed in the 1880's. The bridge is severely deteriorated and posted with a 3-ton weight restriction. It serves as a key interconnect between Lancaster Avenue (U.S. Route 30) and Montgomery Avenue, both major arterials. The design phase of this project is nearing completion. Right-of-way acquisition is underway. Letting of a contract for construction is anticipated in late 2000. The funding source for design is 80% state and 20% local. For construction, the current 80% federal, 15% state, and 5% local is recommended. Funding levels are recommended at \$500,000 for design, \$3,000,000 for right-of-way, and \$2,355,000 for construction in the first four (4) years of the Program. The Township has budgeted its proportional share in its Capital Improvement Program.

Merion Avenue Bridge over AMTRAK's Main Line - Existing Project

This ±80-year old, severely deteriorated, steel and concrete structure, posted at 10 tons, carries over 6,000 vehicles per day across AMTRAK's Main Line in the Bryn Mawr-Rosemont area of the Township. It serves as a key interconnect between Lancaster Avenue (U.S. Route 30) and Montgomery Avenue, both major arterials. The design phase of this project is nearing completion. Letting of a contract for construction is anticipated in late 2000. The funding source for design is 80% state and 20% local. For construction, the current 80% federal, 15% state, and 5% local is recommended. Funding levels are recommended at \$300,000 for design, \$2,400,000 for right-of-way, and \$2,200,000 for construction in the first four (4) years of the Program. The Township has budgeted its proportional share in its Capital Improvement Program.

Pennswood Road Bridge over AMTRAK's Main Line - Existing Project

This ±70-year old steel and concrete bridge carries 3,500 vehicles per day and serves as a link between Lancaster Avenue (U.S. Route 30) and Montgomery Avenue, both major arterials in the Haverford/Bryn Mawr area. The design phase of this project is anticipated to begin in 1999 with construction contract letting in 2003. The funding source for design is 80% state and 20% local, and for construction, 80% federal, 15% state, and 5% local. Funding levels are recommended at \$534,000 for design, \$900,000 for right-of-way, and \$4,250,000 for construction in the first

(I) #) NO. 8186

LOWM 0800-157.10

Page 3

December 30, 1999

four (4) years of the Program. The Township has budgeted its proportional share in its Capital Improvement Program.

Union Avenue Bridge over SEPTA's Ivy Ridge Line - Existing Project

This ± 85 -year old bridge has serious structural deficiencies resulting in a weight restriction of 5 tons. Union Avenue is located near and parallel to the heavily congested City Avenue (U.S. Route 1). It is often used as an alternate route at peak rush hours. The design phase of this project is underway with construction contract letting anticipated in 2002. The funding source for design is 80% state and 20% local and for construction, 80% federal, 15% state, and 5% local. Funding levels are recommended at \$280,000 for design, \$250,000 for right-of-way, and \$2,000,000 for construction in the first four (4) years of the Program. The Township has budgeted its proportional share in its Capital Improvement Program.

River Road Bridge over Mill Creek - Existing Project

River Road Bridge was initially inspected by PaDOT in 1985 under the Schuylkill Expressway (1-76) Reconstruction Project. It was found to be seriously deficient and in need of re-decking. A subsequent inspection determined that the substructure has experienced settlement. This, coupled with the overall advanced deterioration of the bridge, resulted in a recommendation to replace the structure. The design phase of this project is underway with construction contract letting in 2001. The funding source for design is 80% state and 20% local, and for construction is 80% federal, 15% state, and 5% local. Funding levels are recommended at \$190,000 for design, \$20,000 for right-of-way, and \$735,000 for construction in the first four (4) years of the Program. The Township has budgeted its proportional share in its Capital Improvement Program.

Traffic Signal Closed Loop System, Montgomery Avenue

This project consists of a closed loop traffic signal system for the Montgomery Avenue corridor from City Avenue (U.S. Route 1) to Grays Lane. The project includes 20 intersections over a distance of 4.5 miles with average daily traffic volume (ADT) as high as 20,000 vehicles. This traffic responsive system will link all 20 signals together with a central computer in the Township's Public Safety Building, greatly enhancing the operational efficiency and smooth flow of traffic on this major transportation corridor where there is little opportunity for constructing physical improvements. In addition, this will complement the closed loop system currently under design for Lancaster Avenue (U.S. Route 30). The funding source is approximately 23% local and 77% state, as the Township will provide design and the state will provide construction of the project. Funding levels are recommended at \$300,000, with \$70,000 for design and \$230,000 for construction in the first four (4) years of the Program.

Natural Gas Vehicle Project

This project consists of the construction of a compressed natural gas fueling station and the acquisition of 72 alternative fueled vehicles. The design phase of the fueling station is completed and the project in the letting phase. Construction is anticipated in 2000 with acquisition of the

LOWM 0800-157.10

Page 4

December 30, 1999

NO. 006

vehicles shortly thereafter. The funding source for both design and construction is 80% state and 20% local. Continued funding in the first four (4) years of the Program is recommended. The Township has budgeted its proportional share in its Capital Improvement Program.

Ardmore Streetscape

This project consists of improvements on Cricket Terrace, Cricket Avenue, Lancaster Avenue (U.S. Route 30), Station Avenue, and Rittenhouse Place in the Ardmore business district. Design is underway. Construction is anticipated in 2000. The funding source is 100% local for design and 80% state and 20% local for construction. Funding levels are recommended at \$563,000 for construction. The Township has budgeted its proportional share.

Rock Hill Road and Belmont Avenue Corridor Improvements

Resulting from a detailed study prepared by the Township in an effort to mitigate existing traffic congestion, add capacity for future growth and economic development, enhance environmental conditions and improve community amenities, several capital improvements have been outlined within this Township "gateway" area. Improvements include upgraded traffic signals and intersection widening to provide auxiliary lanes at two intersections, widening of Rock Hill Road and Belmont Avenue to provide additional through lanes and streetscape improvements, and modification of the existing I-76 and railroad overpasses to facilitate additional lanes on Belmont Avenue in the vicinity of the I-76 interchange. The funding source for design and construction is anticipated to be 40% local and 60% state, as the local funding will be achieved through the adoption of a transportation service area district. Funding levels are recommended at \$9,500,000, with \$1,700,000 for design, \$1,300,000 for right-of-way, and \$6,500,000 for construction in the first four (4) years of the program. For details regarding the project, see Attachment "A."

All of these projects provide significant benefits that transcend the boundaries of Lower Merion Township.

The Township has in the past and will continue to actively support the Twelve Year Program and its goals to improve safety, enhance mobility, the movement of goods, and the preservation of the transportation system by providing worthy candidates that provide regional as well as local benefits, and by providing the local required funding. However, the Township cannot do it alone. The financial support of the State Transportation Commission is essential. Therefore, we respectfully request your continued support.

Attention: Anita Everhard, Executive Secretary

Re: 2000-2012 Twelve Year Transportation Program

Dear Ms. Everhard:

On behalf of the Board of Commissioners of the Township of Lower Merion, Montgomery County, I am herewith submitting revised and supplemented testimony regarding the 2000-2012 Twelve Year Transportation Program. This supersedes previous testimony provided on October 15, 1999.

The Township of Lower Merion has in the past and will continue to actively support the Transportation Program and its goals to improve safety, enhance mobility, move goods, and preserve the transportation system by providing worthy candidates that result in regional as well as local benefits, and by providing the required local funding. Therefore, we strongly recommend careful review and respectfully request favorable consideration of the Township's recommendations contained in the attached written testimony.

Thank you for the opportunity to provide input into the formulation of this critical program. Please do not hesitate to contact me at (215) 222-3000 if there are any questions or if additional information is required.

Very truly yours,

PENNONI ASSOCIATES INC.

RE: Removal of RT. 29 Bridge

The Borough of Pennsburg would like to submit these letters on it's behalf as public comment in our on going effort to have the Route 29 railroad bridge removed.

The bridge over the abandon railroad tracks has become a safety issue with regard to deterioration and pedestrian and vehicular traffic. Removal of the bridge would allow for continuation of the sidewalk on the south side of the bridge. Currently pedestrians, including students walking to the high school, must cross over Main Street to cross the bridge than cross back over Main Street again to continue their walk. We consider this to be a serious safety issue and have hired a crossing guard as a temporarily solution.

We appreciate the opportunity to participate in the hearing for the Transportation Improvement Program. We certainly hope this input will help to expedite the process for the bridge removal. Please contact us if there is any further information that is required.

Sincerely,

William Umbehauer Jr.

Mayor

903 Main Street Pennsburg, PA 18073

TIP Comments DVRPC Public Affairs Office The Bourse Building - 8th Floor 111 S. Independence Mall East Philadelphia, PA 19106

Concerned Leaders of Pennsylvania,

I am writing to urge you to schedule the demolition and reconstruction of the railroad bridge at the south end of Pennsburg Borough this year. This is the only link of the three boroughs that has been certified by PennDOT as a hazard and that our children and pedestrians are still forced to use. Besides a record of 105 speeding violations in that area last year, visibility is poor because of the narrowing and rising roadway plus there is no sidewalk on the west side. The Upper Perkiomen School District relies on the School Code of 1949 to deny our children bussing from within a 2 mile radius and so students must cross a major highway twice to use the one sidewalk on the east side.

Our children and citizens are in danger every day that this bridge remains in place. Housing developments and population growth are far ahead of regional and roadway planning. Please help us level the bridge and install a traffic light at 11th Street and Route 29.

Thank you for your attention to this matter that has been a problem for far too many years.

Sincerely,

Linda A. Peddigree

RE: Rt. 29 Bridge (Main St.)

Pennsburg, Montgomery County

This letter is in response to the proposed reconstruction of the Main Street Bridge. We are in full support of said project, our concerns for the welfare of our business taken into consideration. Hopefully, this project will commence as soon as possible, so that it is completed without too much interruption and benefit the community at an earlier date.

Thank you,

Douglas Murray | President and CEO The Chesterfield Group

June 20, 2000

TIP COMMENTS DVRPC Public Affairs Office The Bourse Building - 8th Floor 111 S. Independence Mall East Philadelphia, PA. 19106

To Whom it May Concern:

I feel it is of the utmost importance that the Route 29 Bridge be removed, and as quickly as possible. I am in complete support of the proposed project to remove the bridge.

The safety of our school children is in jeopardy when they are crossing this pridge to walk to the High School. Visibility is poor for motorists. The bridge is very old and more than likely will need major repairs in the very near future. It seems the prudent thing to do would be to eliminate it.

Thank you for your consideration in this matter.

Very truly yours,

Ted Hopkins, President

Re: Removal of Main St. (S. R. 29) Bridge near Eleventh St., Pennsburg

To Whom It May Concern:

Please be assured that the Board of Directors of the Upper Perkiomen Valley Chamber of Commerce supports Pennburg Borough's November 1, 1999 **Resolution 9-99** regarding the removal of the bridge on Route 29 between 10th and 11th Streets. The Chamber shares their concern for the safety of drivers and pedestrians in the vicinity.

This issue requires immediate attention and a timely resolution. Rapid growth in the Upper Perkiomen Valley will compound the problems associated with this dilemma -- increased traffic is inevitable. The potential for respective increases in pedestrian and vehicular accidents, and the proportional disruption to businesses and residents is cause for great concern.

Inclusion of this project in the transportation plan is imperative. Fast-tracking would be a responsible and appropriate approach. Your consideration of this request is appreciated.

Sincerely,

Luanne B. Stauffer

Marine B. Skanffer

September 29, 1999

Mr. Leo Bagley, Director of Transportation
MONTGOMERY COUNTY PLANNING COMMISSION
One Montgomery Plaza
Airy and Swede Sts.
Norristown, PA. 19404

Dear Mr. Bagley:

The railroad bridge on Main Street between 10th and 11th Streets which spans the abandoned rail line has become a matter of concern regarding vehicular traffic and pedestrian safety. What once was a useful structure has become a dangerous obstacle which has fallen on disrepair, is fostering vandalism and considered a "hazardous" situation by PennDot for students walking to the Upper Perkiomen High School. The intersections of Main Street and 10th Street and the intersection at 11th Street, which serves as a main access route for the high school, are already difficult to maneuver around due to the obstruction by the bridge and the high volume of traffic. The intersections will further be encumbered by the addition of two sizable subdivisions which will also use the intersections as their main accessway.

I am asking for your help and support in finding a solution to the safety concerns relating to the railroad bridge. I believe the final solution should result in the removal of the bridge and improvements made to the roadway and sidewalk. In order for you to see and understand our concerns first-hand, please join us for an on-site inspection of the bridge and adjoining intersections on October 14, 1999 at 7:10 A.M.

Please confirm your intentions with borough secretary, Jeanne Hopkins at 215-679-4546.

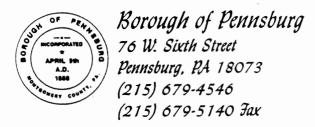

Sincerely,

William Umbehauer, Jr. MAYOR

Jeanne W. Hopkins Secretary/Treasurer

January 20, 2000

Senator James W. Gerlach 1230 Pottstown Pike Suite 4 Glenmoore, PA. 19343

Dear Senator Gerlach:

The Borough of Pennsburg has turned to you for help a number of times over the years for guidance and funding to improve the health, safety and quality of life of our residents. You have always responded quickly, offering help and finding solutions to our problems. We have all benefited from the help and support you have given to our community.

Again I must ask you to help us with a project that will greatly improve the safety of vehicular and pedestrian traffic on our Main Street.

As you know, the Route 29 bridge over the abandoned railroad line in the borough has been targeted for removal for safety issues mainly that of students walking to our high school just off the intersection at the base of the bridge.

Mr. Andrew L. Warren, District Administrator of PennDot, has indicated support of our area representatives is vital in order to begin this project and move it forward in a timely fashion. In addition, with two subdivisions adjacent to the bridge beginning construction this spring it is important we try and coordinate their Main Street improvements with that of the bridge removal to avoid unnecessary expense, delay and inconvenience to residents and motorists.

Therefore, I would appreciate it if you would again contact Mr. Warren indicating your continued support of this project. Your support is essential if we are to remove the bridge and improve the safety of our Main Street for citizens and motorists.

Very truly yours,

William Umbehauer, Jr. MAYOR

January 20, 2000

The Honorable Ray Bunt, Jr. Lower Level, Suite 1 105 Memorial Drive Schwenksville, PA 19473

Dear Representative Bunt,

We sincerely appreciate your efforts to support the removal the railroad bridge on Main Street in Pennsburg.

As you my recall from our conversation, PennDOT notified us that the tack of a sidewalk on the south side of Main Street, which causes students to cross Main Street at the 11th and Main Streets intersection without assistance, has created a "hazardous" situation. Removal of the bridge which allows for continuing the sidewalk would be a long term solution to this serious safety issue.

In the meantime, Pennsburg Borough has agreed to the employment of a crossing guard to assist our students as they cross, so creating a safer situation. However, the existence of this useless bridge remains a safety issue for both pedestrian and vehicular traffic.

We appreciate your interest and support and hope that you will do whatever is necessary to expedite the process of removal of the bridge. We thank you for your continued care and concern for the residents of the Upper Perkiomen Valley.

Sincerely,

Anita S. Bieler, EdD

September 23, 1999

Bill Umbehauer, Mayor 806 Main Street Pennsburg, PA 18073

Dear Mayor Umbehauer:

We sincerely appreciate your efforts to "spearhead" the resolution to the danger of the 11th and Main Street intersection difficulty by contacting our legislators and requesting removal of the railroad bridge between 10th and 11th Street.

As I indicated in our conversation, PennDOT has notified us that due to the lack of a sidewalk on the "west" side of Main Street, causing students to cross Main Street at the 11th and Main Streets intersection without assistance, there is a "hazardous" situation. Removal of the bridge, and subsequent continuation of the existing side walk would be the long term solution. However, in the meantime, a short term solution would be the employment of a crossing guard to assist the students. The high school day begins at 7:35 and ends at 2:35, so the crossing guard would need to be in place for approximately 30 minutes at both times (7:10 - 7:40 and 2:30 - 3:00) daily. We are asking that the Borough of Pennsburg employ the crossing guard to alleviate this dangerous situation.

I believe you have a copy of the report from PennDOT.

Thank you.

Sincerely,

Anita S. Bieler, EdD

Re: Rt. 29 Bridge (Main Street)

Pennsburg, Montgomery County

Dear Mr. Warren:

As the Rt. 29 Bridge Project proceeds, Professional Pharmacy of Pennsburg asks that you include the following request into your plan design.

Professional Pharmacy now has only one (1) cut out curb access to our store. This has proven to very dangerous. Professional Pharmacy has experienced three (3) accidents involving our customers with this single entrance/exit access to our parking lot. The latest accident causing considerable damage to our building inside and out. Fortunately no one has been injured. In the interest of safety to our patrons and local citizens, our request is that in your design plan you incorporate one (1) additional curb cutout to help alleviate congestion and provide for safer movement of traffic into and out of Professional Pharmacy.

Please keep us informed as to the continued progress of the Rt. 29 Bridge Project and I thank you for your time and consideration to Professional Pharmacy's request.

Re: Rt. 29 Bridge (Main Street)
Pennsburg, Montgomery County

Dear Mr. Warren: 4"

Presently before your District staff's attention is a project in the Upper Perkiomen Valley area for the removal of the bridge on Route 29, Main Street, between 10th and 11th streets in the Borough of Pennsburg.

The Borough of Red Hill borders at this junction. The reason for this bridge removal is for improved sight lines and safety issues as this is used extensively by school students walking to the area high school located off 11th Street.

I am enclosing for your review recent correspondence I received from the Borough of Pennsburg, Borough of Red and the Upper Perkiomen Valley Chamber of Commerce supporting this project and seeking my support as well. Mr. James Ottinger, District Utility Manager from your district staff has been involved with borough officials and has participated in at least one community/municipal meeting on the project.

In offering my support to this project I must also go on record as expressing my strong concern that interruption to area businesses be minimized to the fullest possible extent. There are several businesses located immediately on either side of the bridge. There needs to be as little disruption to their daily activities as possible. The businesses being directly effective have publicly stated their concerns at a recent meeting before municipal and State officials.

Therefore, I would appreciate being properly updated on progress on this project and the plans to alleviate and disruption to the daily business trade of those local businesses which would be directly impacted by this project. If there is anything to which I may be of assistance, do not hesitate to contact me or my staff.

January 13, 2000

The Honorable Bradley L. Mallory Secretary PA Dept. of Transportation 9th Floor - Forum Place 555 Walnut Street Harrisburg, PA 17101-1900

Re: Main Street bridge near 11th Street Pennsburg Borough, Montgomery County

Dear Secretary Mallory:

This past Fall, 1999, I have been working with municipal, county and business leaders on plans to remove an old railroad bridge located on Main Street, (SR 29), near Eleventh Street in the Borough of Pennsburg. In a letter recently received from Mr. Andrew Warren dated December 21, 1999, copy attached, it is estimated that the cost for this project will be in excess of \$600,000. The purpose of this letter is to officially request that this project be included in PenDot's 12 Year Plan immediately, if it is not already included.

I am also requesting that a high priority be placed on this project for the following reasons. First, there is a safety issue associated this project. The removal of the bridge will improve visibility, improve student pedestrian traffic and safety and for soon to be created intersection placement. Second, there will be several housing developments with ingressing egress onto Main Street near the location of the present bridge. The need to coordinate with these projects and the bridge removal will allow for the alleviation of multiple road construction and its associated disruptions. Finally, there is local municipal and business support for this project and all parties have been and are planning to work closely in achieving the bridge removal.

In consideration of the budgetary demands on the Department and the current anticipated costs associated with this project, I desire to work closely with you and the Department to ensure dedicated funding for this project. Please do not hesitate to contact me to discuss this matter.

Dear Secretary Mallory:

This is a further follow-up to the above-mentioned project. Based upon a public meeting this past fall, I have been working with the area municipal leaders and business owners to secure funding for the removal of the above bridge. This project is based upon well-founded site obstruction and safely concerns, and I strongly support the efforts to obtain quick authorization for this project.

It is my understanding this project is presently pending before the Delaware Valley Regional Planning Commission (DVRPC) and I wish to go on record with you of my strong and enthusiastic support for this project.

Thank you for prompt attention to this matter.

ery truly yours,

James W. Gerlach

> RE: SR 29-Main Street Bridge, Pennsburg Borough, Montgomery County

Dear Mr. Coscia:

This letter is to advise you of our wholehearted support for the removal of the above bridge in Pennsburg Borough. It is our understanding that this project is on the DVRPC's draft 2001-2004 TIP project list and we respectfully request that you retain this project on the final draft of this TIP list so that this project may move forward to completion.

Thank you for your cooperation on this matter.

Very truly yours,

Jim Gerlach

Dear Dra:

al have long been concerned about the dangers of entering main street, Pannshing, from Tanth Street. The elevation of main Street by the construction of a bridge over the railroad imyears ago when traffic was light; but now with many more vahiales on our highways and a generally higher average year, accidents are more likely (Even if a slower speak limit were imposed, il in not sure it would be affective since the distance from the elevation of the bridge to the lower level of main street at Tenth to so shoot. Also, a traffic light which development on Tenth Street is occupied ... would only multiply the problems implicit in that situation. my experience has bear that, whom I was re. turning from taking our pet to Runaway Frarm, I routinely turned right (that is, north) onto

Long alley instead of running the risk throwing morth on main Street. But fast wait until north on the three are 50 to 100 more care loved in the now development. (I know I will never again drive down that Street, shoosing to take our get to Parking Anival Hoogital on Regul.)

I suggest that in this litinagions age blane will be placed on someone if the intention is not corrected premptly.

Re: TIP #9332

PA 63, Woodhaven Road Project

Dear Sirs:

On behalf of the Board of Commissioners of Lower Moreland Township I am writing again to express our serious concerns regarding the Woodhaven Road Project.

The Draft FY2001-04 TIP currently under considerion includes the funding of the project to Philmont Avenue in Lower Moreland Township. In November 1997 PADOT held a public hearing on the project at the Lower Moreland High School. A number of concerns were raised at this hearing regarding the impact of this project on Lower Moreland Township. In May 1998 Secretary of Transportation Bradley L. Mallory sent a letter indicating that a preferred alternative for the project had not been selected and would not be selected until the Draft Environmental Impact Statement was released and a public hearing held. This position was reaffirmed by Secretary Mallory in a letter dated February 16, 1999 to State Representative Roy Cornell. Copies of both the letters are attached.

Additionally in February 1998 the Township submitted to the State Transportation Commission and the Montgomery County Planning Commission a traffic Impact Study of the project prepared by McMahon Associates. This report was provided to Delaware Valley Regional Planning Commission with our December 1998 Comments. It raises numerous concerns about the impact of this project on our community. As of this date we have received no information or response to these concerns or proposals as to how PADOT will address the relocated traffic congestion that will result on their highways of Byberry Road and Philmont Avenue.

[ID#24]

TIP Comments June 20, 2000 Page 2

We continue to wait for the release of the DRAFT Environmental Impact Study for the project and the resulting public hearing that we were told would ultimately decide the future of this project. We question how DVRPC can include this project in the 2001-04TIP in the absence of this information.

Very truly yours,

Alison D. Rudolf

OFFICE OF
SECRETARY OF TRANSPORTATION

February 16, 1999

RECEIVED

FEB 24 1999

Honorable Roy W. Cornell, Member Pennsylvania House of Representatives Room 120, Main Capitol Building Harrisburg, Pennsylvania 17120-2020

LOWER MORELAND TWP.

Dear Mr. Cornell:

In recognition of your long-standing interest in the Woodhaven Road Extension project, I offer the following update on the status of this project.

The recently adopted 1999 Twelve Year Transportation Program lists Woodhaven Road Extension in the first four years for engineering and right-of-way, while construction is listed in the second four years. Total costs for this project have escalated to \$50 million.

The Department was able to reactivate engineering when the gas tax was increased in April 1997. The right-of-way phase was advanced with the adoption of the 1999 Program, with construction waiting in the second four-year queue.

The Federal Highway Administration has asked for revised information for the Draft Environmental Impact Statement (DEIS). Their major concerns were for the revision of traffic projections to reflect the year 2025 and a reexamination of the project's logical termini. We anticipate these answers from our consultants in April 1999. Assuming no further questions or changes are necessary, we expect to distribute the DEIS in July 1999. Based on this timetable, a public hearing could be held in October 1999. Distribution of the final EIS would occur in October 2000, with the environmental Record of Decision anticipated in early 2001. Final design would take 18 months followed by two years of construction and the project would be opened to traffic in the latter part of 2004.

Honorable Roy W. Cornell February 16, 1999 Page 2

If you should have further questions regarding this long awaited and controversial project, please do not hesitate to contact me.

Sincerely,

Bradley L. Mallory

JUN 0 1 1998

May 26, 1998

LOWER MORELAND TWP.

Dear Citizen:

Thank you for attending the November 13, 1997 meeting at Lower Moreland High School to learn more about the Woodhaven Road Project.

Enclosed you will find the latest issue of the project newsletter, which reports our plans to complete and circulate the Draft Environmental Impact Statement and hold a public hearing later this year.

Three alternatives are studied in detail in the environmental document: a No Build Alternative, in which only the Byberry Road Bridge over the Conrail tracks would be replaced; the Byberry Road Upgrade Alternative; and the Woodhaven Road Extension Alternative.

These proposals will be evaluated on their technical merit, with an awareness of public preferences, and each will be given equal consideration. PennDOT has not selected a preferred alternative and will not do so until after the public hearing, when the official comment period has closed and everyone has had an opportunity to provide input.

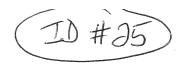

In the next few months, you may want more information about the project -- or a forum in which to present your ideas. I encourage you to contact Joe Capella, the project manager, whose address in St. Davids is included in this newsletter. Members of the project team are also available to meet with you throughout the project's development.

Again, thank you for your involvement in the Woodhaven Road Project. As you know, this project has a long and complex history. Your comments will become part of the official record that documents the outcome of our process.

Sincerely,

Bradley L. Mallory

Secretary of Transportation

Subject: Draft FY2001-04 TIP

Thank you for sharing with us the referenced document that was transmitted by Leo Bagley in a cover memo dated 6/6/00. Upper Dublin Township was pleased to see a number of important projects in the Township listed in the draft and we look forward to their implementation. From our review, there are two projects that were not included that we feel are critical to traffic flow and safety in the Dresher section of the Township. The first is the Limekiln Pike/Susquehanna Road corridor between Dreshertown Road and Twining Road. The scope of work includes various intersection improvements, a new Limekiln Pike connector road, widening the existing Norfolk/Southern railroad bridge over Susquehanna, reconfiguration of the travel lanes, improved drainage, improved signalization and signage along with associated right of way and engineering costs. Our engineer's estimate for this work is approximately \$7,000,000. The project is described in more detail in a letter from Roman C. Jastrzebski, P.E., dated August 26, 1999 to Leo Bagley.

The other project we feel should be included in the program is the improvement of Dreshertown Road from Limekiln Pike to Tuckerstown Road. Dreshertown Road is a state highway (SR 2024) and provides one travel lane in each direction on a varying cartway width. In most areas the cartway width is 22 to 24 feet wide with no curb. In some areas, the road has been widened an additional 14 feet with curb along the frontages of the newer developments. These widened areas serve as a shoulder or bypass area around vehicles turning left. All the residential street intersections are stop sign controlled. The posted speed limit is 40 MPH. The roadway carries between 13,000 and 14,800 vehicles per day (total in both directions). Projections are for at least 2,100 peak hour vehicles within the next ten years.

The roadway has areas of flooding due to inadequate storm sewers. There are no left turn lanes nor shoulders for bypass of turning vehicles at most of the residential side streets. Vehicles exiting Aidenn Lair Road have a severely restricted sight distance to the left due to the road geometry at a stream crossing of Dreshertown Road just to the north of the intersection. There is no pedestrian walkway along large portions of the roadway. An traffic accident survey conducted by McMahon Associates, Inc. as part of its traffic study for the Prudential Office expansion, showed 43 reportable accidents for the period 1993 and 1997 in the 2 ½ mile section of Dreshertown Rd. between Limekiln Pike and Welsh Road. About half of the collisions are subject to improvement by upgrading the two lane roadway with good alignment, widening, turn lanes and shoulders. These include:

Rear end 25 % Head on 2 % Sideswipe 5 % Hit Fixed Object 19 %

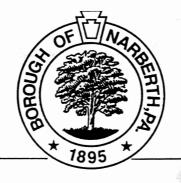

Total 51%

The Delaware Valley Regional Planning Commission recommended an upgrade of Dreshertown Road in its 1986 study of the Fort Washington Industrial Park Corridor Transportation Improvement Plan. Our traffic engineer, Orth-Rodgers Associates, recommends and we concur that Dreshertown Road should be widened to 48 feet between Limekiln Pike and Tuckerstown Road with a two lane road with turn lanes at the intersections, a new drainage system and curb. ORA estimates this work to cost \$2,871,000.

We ask that you please consider the inclusion in the TIP of these two critical projects. Thank you.

RE: Narberth Borough, Montgomery County

Rockland Avenue over AMTRAK Bridge Replacement Project

Dear members of the Delaware Valley Regional Planning Commission:

The purpose of this letter is to formally request the inclusion of the above referenced project into the DVRPC FY2001-04 Transportation Improvement Program

The existing 98-year-old bridge that carries Rockland Avenue over AMTRAK's Harrisburg line in Narberth Borough is severely deteriorated. It is currently closed to both pedestrian and vehicular traffic. This bridge previously played an important role in serving the local community by providing a safe link between residential neighborhoods and an elementary school. The main objective of this project is to design and replace the existing bridge with a *pedestrian* bridge structure. This project is of critical importance to Narberth Borough.

Narberth Borough is committed to funding 100% of the engineering for this project. The Borough is seeking 80% in construction funding for this project. Our design consultant, Pennoni Associates, provided us with the following estimates for each phase of this project.

Mayor: Dennis J. Sharkey

Council

President: Kathleen M. Valentine

William R. Henderson, V.P.

Nancy V. Lotz

Mary Ann Zelno

Mary Jo Pauxtis

Lawrence D. Rubin

Hunter Martin

Solicitor: Patrick J. Broderick

Manager/Secretary. William J. Martin

Asst. Manager/Secretary: Frederick C. Hansell, Jr.

Tax Collector: Regina Watson

Treasurer: Leslie E. Marshall .

BOROUGH OF NARBERTH

• Engineering \$225,000 (100% Borough Funded)

• Right-of-Way \$5,000 (100% Borough Funded)

• Construction \$1,600,000 (80% State, 20% Borough)

TOTAL \$1,830,000

It is our understanding that this project requires inclusion in the Transportation Improvement Program before construction can take place. We estimate that this bridge replacement project will be let for construction in Spring 2003.

Enclosed for your review is the preliminary construction cost estimate for the Rockland Avenue Bridge project.

We appreciate your assistance with this important project. Your efforts in providing funding and support for this project are greatly appreciated. Should you have questions or concerns, please feel free to contact me.

Sincerely,

BOROUGH OF NARBERTH

William Martin

Borough Manager

June 8, 2000

TIP Comments
Delaware Valley Regional Planning Commission
Public Affairs Office
The Bourse Building
111 S. Independence Mall, East
Philadelphia, PA 19106

Gentlemen:

Towamencin Township has developed one of the few township-wide multi purpose trail systems in southeastern Pennsylvania. This +33 miles of on-road and off-road bike and walking trail links the township's parks, municipal facilities, neighborhoods, and employment and commercial centers together and affords the public opportunities to travel throughout the township without the means of the automobile.

Towamencin has constructed more than on-third of the trail system and has another fifteen (15) miles under design.

Towamencin is seeking funding in the amount of \$955,000 for the remaining element of the trail. Most of this trail will be constructed on property owned by PECO Energy and presently used for a transmission line. Towamencin has secured a lease from PECO Energy for the construction of the portion of the trail. The trail will be constructed on lands owned by Towamencin Township.

The proposed trail will enable more than one third of the township's population of 17,000 to directly access the multi-modal transportation center by bicycle on the trail system.

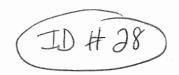

Towamencin will assume the cost for engineering design locally and is seeking construction funding. Therefore, Towamencin would respectfully request the DVRPC consider adding Phase IV of the Towamencin Trail to the TIP in the second four years. This will enable Towamencin to proceed with design at this time.

Do not hesitate to contact me if you have any questions regarding this request.

Thank you.

John A. Granger

Township Manager

Tri-State Citizens' Council on Transportation 4315 Baltimore Avenue, Philadelphia, Pa. 19104

Charles Bode, Chairman

The Tri-State Citizens' Council on Transportation submits this document as its public comment upon the draft DVRPC TIP for FY 2001. We will first respond to several of the questions posed in Volume I of the TIP. We then propose specific additions and scope changes for the TIP. Our transit proposals are discussed in our Consolidated Statement for SEPTA's FY 2001 hearings. Rather than repeat that material, we enclose a copy of that document as part of our submission. The central theme of our Consolidated Statement is that public transportation needs to focus upon improving financial performance, which we again recommend here as the guiding light for transit project selection. This is a direct result of our Route Performance Trends Report which found sharply declining financial performance at SEPTA.

Questions Posed in Volume I of the TIP

Given the projects in the TIP, are we headed in the right direction?

No. The majority of projects in the TIP, directly or indirectly, will increase single occupant vehicle travel. Every project that increases capacity, removes constraints, or eliminates congestion is likely to increase the vehicle miles traveled. VMT, shown on page 2 of the conformity section of the TIP, is projected to increase from 109 to 129 million between 2002 and 2020, an 18% gain. Increased vehicle miles traveled equate to increased time behind the steering wheel, time that cannot be used productively either on the job or in recreation that clears the mind for improved job performance. Therefore, the TIP will increase the region's dependence on imported fossil fuel and decrease the region's competitive position.

We recommend that the scope of every highway project be revised to include specific measures to improve the conditions for people who walk, cycle, and ride transit. Specifically, every highway project should provide for sidewalks, bicycle lanes, and transit preference at traffic signals.

Example 1: TIP # B05 Woodbourne Road and Lincoln Highway Intersection Improvements: "Widening of both intersections to provide additional through lanes on Woodbourne Road, dual left turn lanes on East Lincoln Highway, right turn lanes on Old Lincoln Highway, and traffic signal upgrades." This project is likely to increase the speed of vehicles through the intersections. The roadways will be widened. More lanes of vehicles will be turning simultaneously. All of these changes make crossing the intersections more difficult and more dangerous for

pedestrians and cyclists. Where are the changes for pedestrians to safely cross the new intersections, the adequate crossing time in the light cycles, and the bicycle lanes?

Example 2: TIP # 9721 Torresdale Avenue Harbison Avenue to Linden Avenue: "...upgrading and interconnecting the traffic signals for approximately 29 intersections within the project limits. The improvement is intended to help accommodate the additional traffic that is anticipated during the rehabilitation of I-95." This project is likely to increase the speed of vehicles on Torresdale Avenue. This makes crossing the street more difficult and dangerous for pedestrians and makes drivers less tolerant of the transit vehicles that stop to receive and discharge passengers. Where is the transit preference in the signals? Where is the adequate time for pedestrians to cross? (Why do the lights usually change to stop walking before crossing even the first lane?) Where is the green-wave timing at a slow speed that is appropriate for a street lined with small businesses and homes?

Is the current transportation project development process, including environmental reviews and public input, effective?

No. A large portion of the funds is set aside for public transportation projects. However, the process for selection of public transportation projects is effectively closed to the public. When the list of projects, for example SEPTA's Capital Budget Proposal, is presented for public comment, it-like the TIP--is beyond the stage of being receptive to substantive change from the public. The futility of public involvement is conclusively demonstrated by the failure of efforts over many years of interested groups and individuals to have projects added, removed, or effectively modified. Public involvement is essentially a case of going through the minimal legal requirements without an intention of using the comments received to effectively change the proposals.

Given financial constraints, are we spending money on the right types of projects?

No. The decision process lacks cost-benefit analysis. Further, projects designed to reduce the need for funds through planning, non-construction programs, and education are absent.

Enclosed with our submission are two articles, *Highway Capital and Economic Productivity* and *It's the Regional Economy, Stupid! Misinterpreting the Benefits of Highway Construction*, from the February 1999 issue of Progress, the Surface Transportation Policy Project newsletter. The articles describe the minimal benefits from increasing highway capacity and how even those benefits are basically shifts from the portion of the region without the new capacity to the portion of the region with the capacity.

Example 1: The total financial picture includes the operating assistance for public transportation. SEPTA's farebox recovery ratio and ridership are both decreasing. This is increasing the burden on taxpayers for a declining benefit. Public transit projects should be designed to increase ridership and revenue while decreasing the operating assistance requirement.

Two large projects are projected to consume an enormous amount of funds. The likely result is an increase in the need for operating assistance. While they are at the extreme limits of project size, the same lack of an effective business-like decision process affects the entire project selection process.

Example 2: Numerous projects cite safety. The severity of injuries increases with the speed of the vehicles. Therefore, the most cost effective safety projects may be as simple as reducing the speed limit. Changing the speed limit signs is much less costly than any realignment, signal modifications, or other physical construction.

Example 3: The region is littered with "no pedestrian crossing" signs. What is a person expected to do at an intersection with "no pedestrian crossing" signs for every direction--fly? Effectively, life without constant use of an automobile has become illegal in much of the region. People are forced to move elsewhere or become motorists. Forcing people to use SOVs creates an artificial demand for expensive roadway capacity. Where is the TIP project to replace all the "no pedestrian crossing" signs with pavement crosswalk markings and "stop for pedestrians" signs?

Is the TIP document easy to use? How could it be improved?

Public understanding and, therefore, participation could be facilitated by the addition of two types of information:

The status of projects previously funded but no longer shown in the TIP, for example projects still under construction.

A description of projects proposed beyond the TIP period, including their relationship with projects in the TIP and with prior projects not yet completed.

This information may best presented in a document separate from the TIP, but made available concurrently with the TIP.

The TIP document itself could be improved with a table of contents listing the projects with the page number where the project appears in the document.

NJDOT Statewide Line Items

These items are described in only the most general manner. For example, the freight program could be highway, railroad, port, or airport facilities. For such vague projects an additional public comment process should be developed to obtain public input after individual project elements are developed before the elements reach the bid stage.

Specific Suggestions for Changes to the TIP

We recommend that a few projects, described below, be added to the TIP. Several are non-construction projects that are minor in scope relative to the typical TIP project. Others involve minor construction accompanied by a policy change. Only a few are of a sizeable nature. These larger projects would, of course, begin with various study phases so that the funding requirements within the TIP period are minor. We request that two projects be re-scoped. The reduction in scope of these two projects releases more than enough funding to cover all our other recommended changes, thus preserving the fiscally constrained nature of the TIP. A more extensive discussion of our public transportation recommendations is contained in our Consolidated Statement for the FY 2001 SEPTA hearings which is submitted with this statement.

Recommended new projects are as follows:

- ♠ A public education program to reduce congestion and pollution by encouraging walking and cycling for short trips. In a manner similar to the campaign to conserve energy some years ago in which office workers were encouraged to walk up one and down two floors instead of using an elevator, we suggest a "walk five [minutes], bike ten" in place of driving campaign. Elimination of many short vehicle trips could reduce traffic congestion in some locations much more effectively than constructing more lanes and adding evermore complicated signals.
- ♠ A study to develop a methodology to evaluate the cost-effectiveness of roadway segments and to develop a procedure to remove roadway segments not carrying sufficient traffic to cover their cost. In a manner similar to the process used by SEPTA to rank its routes, roadway segments could be evaluated for the ratio of gas tax revenue earned to operating and maintenance cost incurred. A minimum value would be set, below which, similar to SEPTA's routes, roadways would be abandoned if their usage could not be increased to produce sufficient tax revenue.
- ♠ A study to develop an effective means of consolidating responsibility for roadways. At present for example, a state highway within Philadelphia that is used by SEPTA's trolleys is maintained by at least four parties: SEPTA for the track area lanes, PennDOT for the non-track lanes, the City of Philadelphia for signs and pavement markings, and adjacent property owners for the sidewalks. Surely a process can be developed for "trading" such that the total

cost and work scope of each public entity was maintained, but that a single agency maintained all features of a given roadway segment. Even if PennDOT does not believe it can build track, PennDOT could trade parking lane paving to SEPTA in exchange for maintaining an equivalent amount of paving in SEPTA depots, parking lots, and other facilities.

A public education program to inform the public of the tradeoffs involved in the regional economy. Specifically the program would include:

The cost of sprawl in terms of travel time, highway costs, utility costs, and social impacts such as the need to chauffeur children to all activities and the associated loss of neighborhood feeling.

The alternatives that are possible from policies that:

Provide for increased use of transit effectively. Provide for increased use of walking. Provide for increased use of bicycles.

The likelihood of future higher-than-present gasolene prices resulting from additional automobile use in developing countries including China, Brazil, and India where large populations will consume vast quantities of gasoline.

The relative regional competitive position, both current and projected, relative to other regions, some of which are making efforts to increase time and energy efficiency through policies to curb sprawl and reduce vehicle miles traveled.

A study to establish guidelines for street-name sign location such that the signs are easily visible to passengers in transit vehicles. Numerous signs are now located too high to be seen by passengers not seated beside the windows. The recent trend to locate street-name signs only over the traffic lanes at intersections hides the signs completely from passengers in transit vehicles. Further, the highly tinted bus windows greatly restrict the passengers' ability to see the signs at night, especially those not well illuminated, small in size, or dark in color.

Guidelines would be developed to locate street-name signs at the height of bus windows, to make the signs large enough to read from the bus, and to coordinate street lights and street-name signs such that the signs are illuminated at night by the street lights.

♠ A study to determine the cost savings resulting from a reduced severity of accidents that would be associated with a reduction in the speed limit on congested roadways and intersections. The cost of vehicle and property damage, the cost of police tending to accidents, and the cost of medical care for accident victims would be evaluated relative to

the number and severity of accidents at various speed limits to determine the appropriate vehicle speed limits for various typical congestion situations. Thereafter, the lowering of the speed limit could be evaluated against construction modifications to determine the least costly means to resolve certain traffic situations--construction or a lower speed limit.

- A program to replace "no pedestrian crossing" signs with "stop for pedestrians in crosswalk" signs and associated intersection modifications including striping and pedestrian crossing signals.
- A study to develop project guidelines such that every highway construction project includes provision for pedestrians and cyclists, specifically including sidewalks, bicycle lanes, and provision for pedestrians and cyclists to safely and conveniently move through intersections.
- A study to determine how traffic elimination can improve the region. An article, *Remove It and They Will Disappear* from Surface Transportation Policy Project newsletter of March, 1998 on this topic is included with our submission.
- A study to determine a means to reduce the subsidy per transit passenger. Points A through I in pages seven through fifteen of our Consolidated Statement are generally applicable to all the public transportation operators in the region. Other means may also increase ridership in such a manner that the requirement of subsidy decreases. The purpose of this study would be to determine appropriate means to increase ridership while decreasing subsidy and to develop a mechanism for applying the means within the region. A significant change in agency direction might result, for example, from a policy that the top managers' salaries be contingent upon deficit reduction and only payable from the annual reduction in the deficit.
- A program to increase the effectiveness of public participation in the TIP by means of instituting a process through which the public could initiate the inclusion, or removal, of a project directly through the DVRPC without the need to go through other government bodies. In view of the completed nature of the TIP document at the time of public review, this may require that the future TIP begin at the public review of the previous TIP so that projects from the public can be processed effectively. Also, this may require that DVRPC, as the regional MPO, occasionally become the sponsor and lead agency on a worthwhile project not accepted by another agency.
- The following public transportation projects which are described in our Consolidated Statement:

A scope change to TIP# SEP04 to advance the acquisition of new trackless trolleys.

An extension of trackless trolley Route 66 to Franklin Mills.

(ID #28)

An extension of trackless trolley Route 29 to Grays Ferry Avenue.

An extension of trackless trolley Route 29 to Pier 70.

An extension of trackless trolley Route 79 to Pier 70.

An extension of the Market-Frankford Subway-Elevated line westward to the Blue Route. For purposes of the TIP, the portion of this project within the TIP time frame would be the initial studies.

A scope change to projects TIP# S053, S073, and 9791 to partner with other agencies to build a quality Girard Avenue Light Rail Line specifically with neighborhood revitalization as an integral part.

A University City Streetcar Loop.

A Center City Streetcar Loop.

An Erie-Torresdale Light Rail Line.

A Northwest [Philadelphia] Historic Trolley Route.

A scope change to the Bus Purchase Program (TIP# S025) to begin acquiring fuel cell buses, and to acquire buses with improved suspension, air conditioning, and announcement/signage systems.

A study to develop vehicles that can be maintained entirely within the overnight and weekend periods so that the number of vehicles can be reduced to just the number required to provide the service.

A change in scope for TIP# S031 and S074 to reflect the effect on the region of funding both the construction cost and the future deficits and to reflect the realities of a project outside the operator's demonstrated area of interest and competence. Specifically, a change from the proposed scope to a busway over the R6 right-of-way from 30th Street Station through Norristown to King of Prussia, a purchase of service contract for additional bus service between Philadelphia and Reading, an extension of the Erie-Torresdale Light Rail line, a shorter routing for the R8 train, and Breeze-type bus services. Within the time frame of this TIP this change of scope would involve the initial study and design of the revised facilities and the purchase of Philadelphia-Reading bus service.

CTC DELAWARE VALLEY CITIZENS' TRANSPORTATION COMMITTEE

814 Disston Street, Philadelphia, PA 19111 215-725-7951

June 8, 2000

To: Delaware Valley Regional Planning Commission

From: Lorraine Brill, Delaware Valley Citizens' Transportation Committee

Re: DVRPC Draft FY 2001-2004 Transportation Improvement Program for Pennsylvania, Project #9345, Krewstown Road over Pennypack Creek, Bridge Replacement - Commemts and Recommendations.

I am Lorraine Brill, Chairperson of the Delaware Valley Citizens' Transportation Committee (DVCTC), and represent DVCTC on the Regional Transportation Committee of DVRPC.

We have been working with the "Coalition to Save the Olde Krewstown Road Bridge" (Coalition) for many years. DVCTC testified about this project in the FY 1997-2000 TIP, and the FY 1999-2002 TIP (copy of statement enclosed). We continue to oppose the construction of a new bridge, and advocate rehabilitation of the existing bridge. We are pleased to see that the FY 2001-2004 Draft TIP postpones construction funds to later years beyond FY 2004; however DVCTC would like the description of Project #9345 changed to a bridge rehabilitation project.

Attached herewith is a copy of a letter (dated 12/23/99) the Coalition received from State Senator Frank Salvatore re Act 53 of 1999. This Act limits the use of state funds for the Krewstown Road Bridge for rehabilitation purposes only.....the money cannot be used for a replacement bridge!

The City of Philadelphia's FY 2001-2006 Capital Program, approved by City Council on 3/30/00 and signed by the Mayor on 4/11/00, also identifies the Krewstown Road Bridge Project for FY 2003 as a rehabilitation project, funded as:

Local - \$ 460,000

Local - \$ 460,000 State - 805,000 Federal - 4,485,000 Total \$ 5,750,000

On January 26, 1999, I met with Paula Estornæll and Darrin Gatti of the Philadelphia Department of Streets to discuss the Krewstown Road Bridge project. Enclosed is their position given to me at that time. We submitted this information to our Traffic Engineering consultant, Robert Pearson, who responded with his comments of 7/20/99 (copy attached). These comments were sent to Commissioner Moy, Philadelphia Department of Streets, on 10/7/99 but we never received an answer. Copies were also sent to PADOT, DVRPC, FHWA, Mayor's Office of Transportation, and State Senator Frank Salvatore.

The Urban Engineers Environmental Study referred to in our statement of 12/7/98 should be finalized in the near future, and we have asked John Lutz, Chief Bridge Engineer, to make copies of the study available to interested parties, such as the Coalition and DVCTC; DVRPC should also request a copy.

D#30

COMMENTS ON TIP

Pennsylvania Subregion Adopted January 1999 Submitted by Illy Sobel

May 31, 2000

My comments refer to attention for Route 200 Section 100,200. A severe congestion pattern has developed in this corridor and is getting rapidly more aggravated. PennDOT contracted with Urban Engineers to produce a Congestion Management System Analysis of this corridor, S.R. 0202 Section ES1. It was issued in August 1997.

There are conclusions and recommendations in the report that need to be implemented at this time. The report determined that six lanes need to be put in place. This must be put in the PennDOT planning process over the next 4 to 10 years. The report also called for a set of alternatives, which have so far received limited considerations. I suggest the consideration of these recommendation begin now to provide early relief, and produce improvement in air quality at an early date.

These recommendations from the CMS are as follows:

- 1. Provide bus service along the corridor. To be effective the service must be considered from the Wilmington RR station in Delaware, across the state border to Westchester in Chester County.
- 2. Effort to involve DelDOT and DART in Delaware, along with PennDOT and SEPTA needs to be supported. This effort has begun but much remains to be discussed and carried forward. A support item should be introduced in the current TIP schedule.
- 3. The study calls for infra-structure improvements on the corridor to make bus service feasible. The roadsides at potential bus stops must

be made pedestrian friendly. This includes bus pull-offs, shelters for passengers, and crossovers for pedestrian use over the roadway.

- 4. Consideration for traffic lights with provisions for bus control preemption to facilitate a higher, more attractive level of service.
- 5. Develop plans for Transit Oriented Development along the corridor. This is being implemented currently by DVRPC and Delaware and Chester County Planning.
- 6. Provide Park-and-Ride sites so each bus stop can service the surrounding territory.

This planning work should proceed in this FY so the work to produce transit service is not totally sequential. The implementation of infrastructure will take several years, but early planning and insights needs to be initiated at this time and made available for the road planning and construction phase.

It would be highly desirable for service to proceed at an early date before full scale highway improvements can be completed. The TIP for this proposed project should considered and added to the work for the next FY. It could be an addendum to the TOD planning that DVRPC is currently undertaking in the Route 200 corridor.

Ladies & Gentlemen,

Your planning on projects around the 422 route need revising! It won't matter what work is done on Rt. 202; if you still back up onto it (Rt. 202) from the route 23 interchange on 422! To provide the kind of relief that the 202/76/422 interchange area needs - you need to accomplish several things.

- Traffic onto 76 West must enter without, 202 south/ 422 west/ or Warner road traffic crossing through it. Site of numerous accidents and several fatalities. Could be accomplished with an overpass.
- 23 west traffic from 422 west must not cross traffic getting onto 422 west from 23 east. This exit needs to be eliminated and combined with the 23 east exit (A light would work well here - just like the one on the other 422 off ramp).
- 23 east onto 422 west should be rerouted and premerged (can still go under 23) with traffic entering 422 from 23
 west. A timing device then should be installed to limit the number of cars merging at once from 23 onto 422 west.
- The Old Betzwood Bridge needs to be completed in 2001-2002 not 2003! The number of cars entering 422 (both
 west and east) just to cross the river has dramatically increased over the last 5 years due to the incredible growth of
 west Norriton and lower providence.
- The width of Gulph road in the west bound direction needs to be widened to two lanes for the 300 feet preceding the
 Rt. 23 intersection, with the right lane being made a dedicated right turn lane. Currently traffic routinely drives over
 the double yellow lines to pass traffic that is waiting to turn right. This is further aggravated by the fact that the road
 goes from two lanes to one lane then widens back up to two lanes about 150 feet later; just preceding the light at
 Rt.23.
- The balance of the work along the Old Betzwood bridge looks OK, except there is no distinct showing of the
 replacement of the Old Steel Bridge over the Rail Tracks that still exists. This bridge will most likely be found to be
 defective AFTER THE ROAD IS REOPENED!

You know that the Rt. 422 bridge over the Schuylkill River is the only available crossing for miles of congested roadway in each direction!

I can appreciate the amount of time and effort that goes into planning; but if you don't reach out to the community to ask them what they need - you will get what we have here! I believe that a two or three day period of handing out flyers at intersections near proposed work areas could generate volumes of practical solutions - many which may come out more cost effective to produce than the ones generated by the local authority or of hired engineering firms! This local request for input should be made (And made VERY public) before the final proposals go through. NJ does a much better job of finding out what the local residents want - since obviously the DVRPC operates also in NJ I can only surmise that the better job is due to diligence by the Local Authority (I lived in NJ during the construction of Route 55).

Please let me know if I can be of any assistance in making the stated improvements happen.

Sincerely,

Eddie Sabol

Subject: tip plan comment

Traffic is horendous on gulf rd going west past the convention center to 23 to get onto 422.

As gulf rd goes up the hill to 23 (intersection of 23 & outer line drive, entrance to park) 2 lanes of traffic turn into 1. This is an accident waiting to happen. I travel this way every day.

Would like to see that small stretch of gulf rd widened into 2 lanes.

Can this be put into the plan ??

Subject: New Traffic Light

After reviewing info available on the Internet related to plans on the TIP I was unable to locate any reference to a light being installed at the dangerous intersection Rt. 422 & 724. Many people feel that making a left hand turn anytime at the off ramp is hazardous. Heavy traffic and back-ups on the ramp occur throughout the day. Is something being planned to correct this in the near future? If not, area residents would like to know why! Thank you.

Subject: The Philadelphia Bike Network

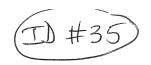

Greetings: this letter is to ask for your support for the Philadelphia Bike Network. The Streets Department has cut this important project from the TIP (transportation Improvement Program) which will cause Philadelphia to lose federal transit dollars.

The Bike Network will help all Philadelphians ride more often and more safely. Help make our streets safer and our air cleaner.

Thanks for your support.

I look forward to a city in which children can again safely ride to school, and where working people can enjoy a safe form of transportation.

sincerely, Michael McGettigan 627 S. 27th St. Phila. PA 19146

Dear DVRPC

I am concerned to hear that the Philadelphia Bike Network has not been included in the draft TIP which should include a plan for a Bike Network in

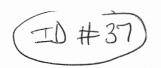

the Delaware Valley. Encouraging bike use for commuting by making road s more

bike friendly, will reduce road congestion, air pollution and is healt hier

for individuals to use for travel, shopping and leisure activities. Please

reconsider this important funding.

Subject: Draft TIP and the Bike Network

It is my understanding that the draft TIP includes no provision for the Philadelphia Bike Network. The Bike Network is a vital part of transportation planning in the region. Bicycle transportation should be encouraged rather than discouraged, and the safe sharing of resources between automobile and bicycle traffic is a cost-effective way to both lessen traffic congestion and improve our region's health.

If the Bike Network is kept out of TIP, then planning will be made without considering a large and growing segment of the region's traffic. The result of that will be increased difficulties between automobiles and cyclists, including traffic fatalities, and increased congestion to the extent that fewer people ride bicycles than would have been the case with well-planned routes.

I trust the Bicycle Coalition of the Delaware Valley to present a rational and safe plan for integrating bicycle traffic in to the transportation future of Philadelphia. Please consult with the Coalition before proceeding with a final TIP document.

Subject: Bike Network

Hello. I would like to express my ardent support for inclusion of the Philadelphia bicycle network into the DVRPC TIP. I bike everyday around Philadelphia between my home in Mt. Airy, Temple University Hospital, and Center City, and have seen for myself that Philadelphia needs desperately to make its streets more accessible to bicyclists. Addition of more bike lanes, bike racks, and bike paths needs to be done to lessen the impact of cars on Philadelphia's quality of life. The streets are already very intimidating to bicyclists and pulling of funding from the bicycle network will just make the problem worse. Much is needed in the way of education as well to encourage more people to commute by bicycle. Every person on a bicycle is a victory for the environment as well as the individual's health and well being. Thank you.

Subject: 2001-2003 TIP; comment on TIP #9555

I write on behalf of East Falls Community Council (EFCC), the broad-based organization of residents with primary concern for quality-of-life issues.

TIP #9555/MPM #17582 alludes to the "realignment" of the intersection of School House Lane and Ridge Avenue. This community is concerned about the prospect of increases in both traffic volume and traffic speed on School House Lane. In particular, any realignment that promotes increased access between the City Avenue off-ramps to Ridge Avenue with School House Lane would be particularly objectionable to a wide cross-section of EFCC's members.

In addition to passing through a quiet residential area, School House Lane also bisects the compuses of two significant educational institutions, namely, Philadelphia University and William Penn Charter Academy. With students ranging in age form 6 through their ealry 20's crossing this thoroughfare throughout the day and evening, heavier traffic would be a severe detriment to the educational programs of these vital institutions.

We urge you to refrain from measures that would tend to increase traffic volume or traffic speed on School House Lane. Please keep me informed of your plans in this regard, so that I in turn may keep my members appropriately informed.

Sincerely,

Richard H. Lampert President, East Falls Community Council 3122 West Coulter Street Philadelphia, PA 19129 Phone 215-238-5027 Fax 215-238-8483

Re: Proposed TIP for FY 2001 School House Lane Project

Dear Mr. Coscia:

I am writing to comment on the proposed TIP for FY 2001 and in particular the portion dealing with School House Lane.

I am a resident of the East Falls neighborhood in the northwest section of the city. For several years, our neighborhood has been battling the Streets Department over its plan to widen School House Lane and realign it at its base. Most of the residents of this neighborhood oppose this project because it would introduce an increase in the volume and speed of traffic that flows through our neighborhood. A report by an independent civil engineer engaged by the neighbors states that this increase would cause a safety hazard because of the proposed design and the nature of the traffic that already uses this street. All of the residents of School House Lane between Gypsy Lane and Henry Avenue, all of the residents of the so-called "new homes" on School House Lane above the SEPTA tracks, all of the residents of Timber Lane (including Senator Arlen Specter) and many of the residents of Apalogen Road are vehemently opposed to this ill-conceived project. However, to put it bluntly, our entreaties have fallen on deaf ears.

Although we have <u>proven</u> that the proposed widening is not required by any law or regulation at the local, state or federal level, and that the project would create a serious safety hazard, the Streets Department has insisted on pursuing this project. We have proposed a compromise, but it has been rejected out of hand by the Streets Department. I am enclosing copies of several petitions signed by residents of our neighborhood, together with other documentation showing the extent of neighborhood opposition, the nature of the compromise we have proposed and the report of the engineer we consulted on this project.

I am sure you appreciate the fragility of residential neighborhoods in old and troubled cities like Philadelphia. It seems obvious that the City should nurture and protect neighborhoods that have survived and prospered. It seems equally obvious that projects like the one proposed

Buchanan Ingersoll

June 19, 2000 Page - 2 -

for School House Lane could, practically overnight, upset the delicate balance that has so far allowed neighborhoods like ours to remain stable, safe and attractive. Philadelphia desperately needs to maintain this type of neighborhood. We fear that the Streets Department's plan will actually destroy it, all in the name of facilitating high speed, high volume traffic.

We therefore strenuously object to the proposed plan for School House Lane. Please file this letter in the official comment file for the proposed TIP for FY 2001.

Very truly yours,

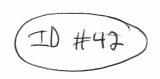

Antoinette R. Stone

Enclosure

APPENDIX RE: SCHOOL HOUSE LANE

- 1. Minutes of meeting of the community, November 21, 1994, where the entire community unanimously resolved "that the street not be expanded more than its current width" and that repairs be done "without widening School House Lane"
- 2. John Sokol, P.E. letter of April 18, 1997 that there are no AASHTO regulations requiring a widening
- 3. John Sokol, P.E. letter of May 6, 1997 that the City has cited regulations for new construction which do not apply to the rehabilitation of School House Lane; City's proposal not good for community
- 4. Bill Prosser, of Federal Highway Administration, memo of May 14, 1997, that federal authorities would approve repair without widening
- 5. James Ritzman, of PennDot, memo that state authorities would approve repair without widening
- 6. John Sokol, P.E. letter of June 4, 1997: Federal Highway and PennDot letters (and AASHTO standards) prove no requirement for widening; the Street Department has misrepresented these regulations; the community itself has gotten the approvals the Streets Department claimed it could not get; wider road would attract more cars going faster and is less safe; City can and should agree to maintain present width
- 7. Petitions from the community to Mayor Rendell, Councilman Nutter and Commissioner Moy endorsing compromise:
 - a. Repair School House Lane as soon as possible
 - b. No widening between Henry and Gypsy; widening to 28 feet OK between Gypsy and Ridge
 - c. Safe sidewalk for Textile

Re: Draft FY 2001 Transportation Improvement Program for Southwestern

New Jersey and Southeastern Pennsylvania: Volume III—Pennsylvania

Subregion

Please accept the following text as my comment toward the draft for public review. Thank you.

Sincerely, Marcia Ryan Resident of London Grove Township Chester County, PA

PA 41, Delaware state line to PA 926, Reconstruction/New Capacity, TIP #6719. I would like to request that the project not be exempt from the conformity analysis according to the Clean Air Act regulations due to the fact that the project will provide new capacity. Furthermore, I am concerned that a Major Investment Study (MIS) will not be conducted, limiting decision making solely to road-building advocates while jeopardizing exceptional, fertile farmland. Therefore, I would like assurances that secondary impacts analyses will be conducted to include the effects of induced traffic and development in the region. I find that there is too much emphasis on funding truck transportation for freight and not enough on developing rail transportation alternatives. Finally, I would like to request that funding in Later Fiscal Years reflect safety improvements in the road and effective enforcement to ensure compliance with all safety regulations by large, long-haul trucking operators rather than reflect expansion of a two-lane regional state road to a subsidized multipurpose four-lane interstate highway traversing rural and natural landscapes.

Subject: TIP #6719 Public Comment

PA 41, Delaware state line to PA 926, Reconstruction/New Capacity, TIP #6719. Being a resident of this area and generally concerned about the health of our collective environment and about the safety of our roads, I am very disappointed that Chester County's recommendation for \$60 million wasoverlooked in favor of a TIP of \$107.5 million. Therefore, I would like to suggest that funding for this improvement project reflect a commitment to increased safety and enforcement instead of increased lanes and automobiles.

Another issue concerns me, our air quality. We currently live in a non-attainment area which means that our air is not up to federal standards. I find it astonishing that the TIP is exempt from adhering to the Clean Air Act when our air is already of very poor quality. Ignoring this fact is gambling with people's lives. Air pollution has been linked to heart and lung disease, along with asthma. Emissions from automobiles and trucks also contribute to global warming. By increasing lanes, which will increase vehicles, both passenger and commercial on this road, we are ignoring the environmental and health risks associated with air pollution, which will certainly increase in this area should two more lanes be added to the existing roadway. I would like to suggest that the DVRPC reverse its decision as it pertains to conformity analysis. Please do not jeopardize our environmental and public health so that you might be able to decrease perceived congestion. Furthermore, please follow the spirit of our environmental laws and do not try to sidestep them by searching for loopholes that allow you to escape compliance.

I hope you can re-address these mistakes, which will impact people all over the area, especially young children and the elderly. I want to see Route 41 kept to two lanes not only to make the road safe but for the air we all breathe.

Sincerely,

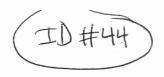

Derek Greenauer

To whom it may concern

June 22, 2000

PA 41, Delaware State Line to PA 926, Reconstruction/New Capacity, TIP #6719. Being a resident of this area and generally concerned about the health of our collective environment and about the safety of our roads, I am very disappointed that Chester County's recommendation for \$60 million was overlooked in favor of a TIP of \$120million. I would like to suggest that funding for this improvement project reflect a committment to increased safety and enforcement instead of increased lanes and automobiles.

Surely, financing this large must mean that a 4 - lane highway is the Delaware Valley Regional Planning Commission's (DVRPC's) preferred improvement for Route 41. I am very disappointed that the DVRPC and its chairman, Colin Hanna are taking a stance away from what a majority of Chester County's planning commissioners endorsed. According to traffic counts, Route 41 does not warrant any additional capacity except in Avondale, where S.A.V.E. proposes additional travel lanes. Please let our county as a whole decide what is best for its residents and not for its isolated individuals with vested interests.

Sincerely,

Matthew S. Winters

Subject: TIP public comment

DVRPCR ~ 4.DOC

PA 41, Delaware State Line to PA 926, Reconstruction/New Capacity, TIP

#6719.

It is unclear to me how TIP #6719 is exempt from the conformity analysis according to the Clear Air Act regulations for a number of reasons. 1. The area of this project is a non-attainment area. 2. The Plan and TIP must contribute to emissions reductions in ozone and CO in nonattainment areas [51.436 and 51.438] DVRPC. 3. What are the guidelines that allow the investment of taxpayers' dollars (\$6,750,000) toward an Environmental Impact Statement studying New Capacity in this area if it will not conform? 4. Can the federal government fund road expansion in a non-conforming area? 5. Cars and trucks produce emissions that contribute to smog, and therefore to global warming, and to serious health effects such as asthma. What are the costs and what are the benefits to public health when building a new road?

For a fraction of the cost, Route 41 could be made a safer road for the whole 19 miles of the corridor. The numbers assembled by KCI, PennDOT, and David Horner, S.A.V.E.'s traffic engineer, show that Avondale Borough is the only area that warrants two additional travel lanes for approximately 1.5 miles, not 9.5 miles. The solution of a two-lane road could very well address the safety issue better than a four-lane road.

Therefore, it is fair to conclude that the construction of a four- to six-lane road will only be a generator of SPRAWL, which brings about loss of farmland, degradation of watersheds, and higher taxes, and that will promote more traffic, higher speeds, and more deaths in the northern end of Route 41.

Negative Impacts of Sprawl in the Route 41 Area. **Economics**

1. Farming is the number one industry in both Chester and Lancaster Counties. 2. Road expansion will benefit developers because it is cheaper for them to develop farmland rather than infill. 3. Agriculture is an economic engine that brings in substantial revenues and will be negatively affected. 4. Due to sprawl, this area is the second most threatened agricultural farmland in American (American Farmland Trust / Governor Ridge's 21 Century Environmental Report).

Water Quality

1. It makes economic sense to protect our watersheds. NYC, Atlanta, Portland, and many other metropolitan areas are spending billions of dollars protecting their watersheds because it is cheaper to protect watersheds then to clean up polluted water. Also the quantity and quality of drinking water are both improved (CNN Report and NY TIMES) 2. Route 41 runs thought five watersheds that are municipal drinking water supplies? 3. Less and less pervious surface cause more and more flooding. What is the cost of flooding in terms of employment, property damage, lost crops, and erosion of soils?

Transportation

By the time a road is built, the sprawling effects will have adverse effects on what might have been benefits in travel time to the trucking industry.

I applaud and endorse the Chester County Planning Commission's (CCPC's) endorsement made in October 1999 of \$60 million to address the need for safety improvement on Route 41. It is my understanding that the safety of Route 41 residents and motorists is the top priority, not added capacity in rural and natural landscapes, which I heard firsthand from within the Commission is inconsistent with Chester County's, national award-winning, Comprehensive Plan Landscapes.

I hope that Chester County Commissioners will not override the CCPC in their recommendation.

Transportation Improvement Project (TIP) public comments

Re: PA 41, Delaware State Line to PA 926, Reconstruction/New Capacity,

TIP

#6719.

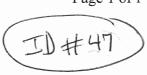

Dear Sir or Madam,

Being a resident of this area and generally concerned about the health of our collective environment and about the safety of our roads, I am very disappointed that Chester County's recommendation for \$60 million was overlooked in favor of a TIP of \$120million. I would like to suggest that funding for this improvement project reflect a commitment to increased safety and enforcement instead of increased lanes, automobiles and urban/suburban sprawl.

Surely, financing this large must mean that a 4 - lane highway is the Delaware Valley Regional Planning Commission's (DVRPC's) preferred improvement for Route 41. I am very disappointed that the DVRPC and its chairman, Colin Hanna are taking a stance away from what a majority of Chester County's planning commissioners endorsed. According to traffic counts, Route 41 does not warrant any additional capacity except in Avondale, where S.A.V.E. proposes additional travel lanes. Please let our county as a whole decide what is best for its residents and not for its isolated individuals with vested interests.

Sincerely,

Andrew J. Spurdle 321 Ellicott Road Avondale, PA 19311

Re: PA 41, Delaware State Line to PA 926, Reconstruction/New Capacity, TIP

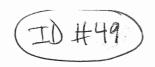

#6719

I have watched the process of upgrading route 41 for some time and it seems clear to me that the road builders are once again playing into developers hands. I was involved is similar debates in the 1970's in Modesto, California. Circular logic was used then - we need the roads because of traffic projections - of course build the road and the traffic will come. Developers must be very anxious to have this bypass installed because the new intersection at 1 and 41 will finally create opportunity to build a mall and extend sprawl to our area. In fact this bypass and attendant intersections will open up the whole western side of Chester county to development given that the commute time to Wilmington will be reduced.

Roads lead to growth. I would like someone to convince me otherwise.

I find it ironic that today in Chester County Governor Ridge signed into law growth governing legislation yet the county cannot have its voice heard in road construction. What is wrong with this picture. I also feel that to spend 120 million dollars to get bananas to Cleveland and Detroit faster is a bit absurd and reeks of pork. I live in Avondale and do not find the traffic to be particularly burdensome.

The area is also trying to preserve the White Clay Creek watershed. How can 2 new 4 lane highway bridges square with that goal. Not only will riparian habitat be broken rather extensively at 2 sites it will also increase pollution in the creek.

Subject: TIP #6719

PA 41, Delaware State Line to PA 926, Reconstruction/New Capacity,TIP#6719. The DVRPC appears to be committed to increase capacity on RT. 41 as evidenced by their support for the \$107 million and not the \$60 million that is the recommendation of Chester County. I would like to see DVRPC support safety improvements on the road and not the increase in capacity. I am surprised DVRPC is not supporting what a majority of Chester County's Planning Commissioners endorsed. The Landscapes Plan for Chester County cannot be implemented if special interests build infrastructure, which is contrary to keeping the area open. The money to buy up the development rights, as the pressure from developers increases with the infrastructure of the road, is not there. Why not give some area of DVRPC the opportunity to remain in farm land and open space? Why not look around the region and see the development roads induce?

Thank you for your time .

VIA FACSIMILE: 215-592-9125

Mr. Barry Seymour Delaware Valley Regional Planning Commission Bourse Bldg., 8th Floor 111 So. Independence Mall East Philadelphia, PA 19106-2515

RE: Route 41

Dear Mr. Seymour:

Below is a list of consultants which I ask that you consider as potential candidates for performing the land use study along of Route 41:

- DPZ, A. Duany, E. Palter Zyberk
 1023 SW 25th Avenue
 Miami, FL 33135
 305-644-1023 tel 305-644-1021 fax
- Mark Schimmenti 865-524-9018
- Victor Dover 305-666-0446
- Ed Risse 703-968-4300
- Michigan Land Use Institute
 Kelly Thayer 231-882-4723 Ext 13
 Paul Bruce 517-739-3640 for US 23 Freeway Alt.
- Prof. Tim Kelsey
 State University of PA
 Dept. of Agricultural Economics, Armsby Bldg.
 University Park, PA 16802
 814-865-2561

In addition, I understand that the TIP for Chester County still reflects a figure of some \$107 million for Route 41 improvements in "later fiscal years." This is inconsistent with Chester County's Comprehensive Plan, <u>Landscapes</u>, and with Pennsylvania's public policy of preserving the invaluable and

Mr. Barry Seymour June 16, 2000 Page 2

uniquely fertile farmland of Chester and Lancaster Counties. Would you please explain why the Tip still contains this larger amount? Thank you.

Very truly yours,

James C. Sargent, Jr. Member, Chester County Planning Commission

JCS/par

cc: Mr. William H. Fulton, AICP

Mrs. Rikki Saunders

(ID#67)

Summary of Oral Comments Presented at DVRPC Draft TIP Public Meetings

Opposition to Blair Mill Road Widening

A. Problems with PennDOT Process

- 1. Meeting notification wider scope of people need to be notified, not just property owners along Blair Mill; also need better methods of notification
- 2. Need timely resolution of issue; being in limbo is unacceptable
- 3. Feel that the decision makers are focused on accommodating big business and politicians at the expense of the people who actually live there
- 4. Real estate agents not being aware of and open about PennDOT studies

B. Existing Conditions, Problems, and Issues

- 1. Traffic problems occur mostly during peak hours
- 2. Level of congestion is to the point where residents have difficulty exiting their driveways during peak hours
- 3. Congestion is caused in part by the difficulty in making left turns at certain intersections and back-ups associated with the Turnpike entrance, forcing motorists to use other roads, including Blair Mill Rd.
- 4. Safety issues- speeding, especially in area of parks and playgrounds
- 5. Truck traffic inability to turn properly causes backups; excessive speeding; noise
- 6. Poor air quality, particularly due to trucks (soot, dust)
- 7. Lack of police presence and enforcement of speed limit
- 8. Problems are caused not by residents, but by commuters to Prudential and other businesses, and trucks from the nearby UPS facility.

C. Problems with Road Widening

- 1. Would exacerbate existing problems
- 2. Would make congestion worse, not better
- 3. Property values will plummet
- 4. Use and enjoyment of property will be drastically diminished
- 5. Too drastic should consider lower impact solutions first (i.e., improve intersections and add Turnpike interchange ramps)
- 6. Partial taking of property not acceptable
- 7. Widening based on future traffic from expanded corporate campuses

Summary of Oral Comments Presented at DVRPC Draft TIP Public Meetings

D. Alternative Solutions

- 1. To alleviate congestion:
 - a. Turn arrows at intersections
 - b. Widening intersections to allow easier turns
 - c. Improvements to the Turnpike entrance to reduce back-ups
 - d. Direct ramps from Turnpike to Prudential
 - e. Prohibit tractor trailers north of Horsham Rd., particularly tandems
 - f. One-way street system
 - g. Improvements to other roads (before widening)
- 2. Safety Improvements
 - a. Reducing speed limit from 35 to 25, primarily in areas across from the park
 - b. Traffic signal or red flasher or stop sign at park
 - c. Warning signs of children crossing street
 - d. Increased police presence and enforcement of speed limit

Noise Walls

Residents along I-95 in the Northeast section of Philadelphia expressed a need for noise walls to mitigate the excessive noise levels and to provide a safety barrier from accidents and debris.

Subject: Draft Transportation Improvement Plan (TIP)

Dear DVRPC:

I understand that the public comment period for the latest TIP is going to end on June 30, 2000.

According to the latest draft, the continued development of the Philadelphia Bike Network has been omitted. The Philadelphia Bike Network is a valuable resource utilized by thousands of cyclist from throughout the Delaware Valley everyday. It's continued development is imperative to the further mitigation of transportation congestion in the area and to the encouragement of healthy lifestyles.

As President of the Bicycle Club of Philadelphia, I represent an organization of over 1300 recreational cyclists throughout the Delaware Valley. Our members have enjoyed the use of the bike network, applaud its existence and desire its timely completion. Omitting the Philadelphia Bike Network from the latest TIP will not serve my membership well, nor the community at large.

Over the past three years, the city has begun to stripe bike lanes. This has been wonderful progress that is appreciated by every cyclist who rides in the city. Additionally, it raises the awareness of motorist that other forms of transportation are being utilized and to be cautious of cyclist. We cyclist applaud the city for their efforts to date and want to see this valuable network expanded and publicized.

In a recent survey by Bicycling Magazine on bicycling friendly cities, the city of Philadelphia landed in the top ten. This happened because Philadelphia government is bicycling friendly, the people of Philadelphia care about alternative methods of transportation and the government and the people want to see them expanded. The Philadelphia Bike Network is part of the reason for the perceived cycling friendliness and must be included in the current TIP to further its development and expansion.

It's imperative that the DVRPC reconsider the omission of the bike network as a valuable means of alternative transportation.

RE: DVRPC Draft FY2001-2004 Transportation Improvement Program for Pennsylvania, Project #9345, Krewstown Road over Pennypack Creek, Bridge Replacement - Comments and Recommendations

Dear Sir:

As president of the Coalition to Save the Olde Krewstown Road Bridge, I am writing this letter to confirm my commitment to making sure the above mentioned bridge stays in its historical condition.

At the end of 1999 I was notified by Senator Frank A. Salvatore's office that the governor has signed a law that will require the monies from the State to be used exclusively as a rehabilitation; not a demolition of the Olde Krewstown Road Bridge project (copy of which is enclosed).

In my letter to all your Board Members back in December of 1998, I testified on the position of the Coalition to Save the Krewstown Road Bridge, which I have also included for you, you will find that there is no reason to have this bridge demolished, there are different safety and improvement features we can do to the current structure, and that actual demolition is not necessary.

Enclosed are different letters and responses from individuals who are familiar with the bridge and its structure.

Your attention to this matter is very appreciated.

Benjamin E. Cohen

President BEC/mmm enclosure

Sincerely

FY 2001 Transportation Improvement Program

Volume IV Public Comments and Agency Responses

Part D Agency Responses

New Jersey Subregion

Agency: NJDOT

Response to DVRPC Regional Citizens Committee (ID# 1)

- I-95 Scotch Road (TIP #4321)
 The project, the culmination of a lengthy planning process, is in final design and right-of-way acquisition is underway.
- I-295/42 Study A (Missing Moves) (TIP #2340A)
- I-295/42/I-76 Study B (Direct Connection) (TIP #2340B)
 The rail-transit strategy from the Burlington-Camden-Gloucester Project MIS was investigated by the NJDOT/DVRPC Transportation Investment Study for these projects which concluded: "The Rail Transit Alternative does not improve Level-of-Service within the Interchange, does not reduce accidents, does not improve design standards, does not divert regional traffic from arterials, and does not separate regional traffic through the interchange."
- Route 29 10C 11B (TIP # 4313)
 All of the federal and state agencies responsible for environmental reviews have approved this project and have issued all necessary permits. The project is under construction.
- Route 1, CR 571 Corridor Traffic Improvement Project (TIP #4311)
 The Department has developed a long-term strategy to address the traffic flow patterns on this portion of the Route 1 corridor. The Route 1 Traffic Signal Elimination Project is the final phase of the overall regional plan. This project will help to alleviate the traffic congestion that currently plague Washington Road, Fisher Place and Harrison Street, by removing the existing traffic signals at those intersections. In place of three signalized intersections, an overpass will be constructed just south of the existing Harrison Street intersection. This overpass will create a safer and smoother traffic pattern for motorists currently utilizing the Harrison Street and Washington Road intersections.

Traffic signals on Route 1 are being removed since they are inadequate for the extremely high traffic volumes on Route 1. The proposed traffic signals on the bypass will facilitate turning movements without impeding the smooth flow of traffic on the bypass.

Runoff from the project will be treated through a series of water quality swales and basins prior to outfalling into existing water bodies.

The Department is preparing an Environmental Assessment (EA) for the proposed project. The EA contains an evaluation of all impacts associated with the alignment alternatives considered for the project. Once the EA is circulated and responses to the document are evaluated, the Federal Highway Administration (FHWA) makes the finding on whether or not the project will cause a Significant Impact. The EA is under final review and we anticipate public circulation of the document in the near future.

The Department will continue to address the potential cultural, social, economic and environmental impacts that are raised by all those concerned with this project.

Response to Burlington County (ID #6)

Route 130 South Jersey Food Distribution Center (TIP #1350)
 The project title and description will be changed per the letter from Carol Thomas.

Response to Camden County (ID #4)

- CR 727 East Atlantic Avenue over Peter's Creek (TIP #2350)
- CR 601 State Street Bridge (TIP #2352)
 The funding needs for these two projects will be satisfied by a modification to the FY 2000-2002 TIP. That modification is pending at DVRPC and is scheduled to be acted on in July.
- Camden Traffic Sign Management Program (TIP # 2324)
 Under the MOU for TIP amendments and modifications, the requested additional funds can be provided subject to the availability of funds.

Agency: NJ TRANSIT

Response to DVRPC Regional Citizens Committee (ID #1)

- I-295/42 Study A (Missing Moves) (TIP #2340A)
- I-295/42/I-76 Study B (Direct Connection) (TIP #2340B)

Please refer to NJDOT's response dated July 7, 2000.

NJ TRANSIT is committed to providing quality rail service on the Atlantic City Rail Line (ACRL); at this time there are no current plans to add service or fund capital improvements that will lead to significant decreases in travel time. In addition, there are no plans to expand service to Suburban Station at this time as SEPTA already offers a parallel rail service at no cost to NJ TRANSIT ACRL customers.

- Transit Rail Initiatives (DB #T300)
 There are many worthy candidate rail corridors within the DVRPC region. The Camden-Glassboro segment of SNJLRTS is included in the NJ TRANSIT 2020 transit map as a candidate project for rail service expansion. The SNJLRT extension to the Trenton capital district is currently under study by the Office of New Rail Construction. Funding for new transit initiatives will be dependent upon Federal earmarks.
- North Jersey Projects in the DVRPC TIP
 NJ TRANSIT's statewide program costs are assigned to each MPO TIP on a formula
 basis that reflect NJ TRANSIT's operations within each MPO. There are no specific NJ
 TRANSIT projects outside of the DVRPC region that are funded in the DVRPC TIP.

Agency: DRPA

Response to DVRPC Regional Citizens Committee (ID #1)

Delaware River Tram (TIP #2374)
 Thank you for giving the Delaware River Port Authority the opportunity to respond to comments put forth from the Regional Citizens Committee regarding construction and operation of the Delaware River Tram (TIP #2374). Several of the Committee's concerns have previously been addressed as part of the recent Environmental Assessment process, but the Port Authority is always pleased to consider and discuss

ideas presented by our customers.

The Delaware River Tram is a FY00 Demonstration Project approved for the State of New Jersey as part of TEA-21. Earmarked federal funding in the amount of \$8million will be provided (over several years) as part of the total project cost of \$26million. The project appears in the FY01 TIP since federal statutes require that project funding be made available over a several year period.

I would like to address specific comments made by the RCC with respect to the Tram project:

- a. There is no justification for the project. The tram is envisioned as a means of linking the Philadelphia-Camden Waterfronts and providing a pedestrian alternative to motor vehicle, rail and bus access. The tram will link existing and planned pedestrian-oriented destinations in both cities. The tram is in compliance with the New Jersey State Development and Redevelopment Plan, the Philadelphia Master Plan, the Camden Master Plan, and Cooper's Ferry Redevelopment Plan. The tram will complement the RiverLink Ferry service in frequency of daily operation and in its ability to perform in all seasons of the year.
- b. This project is tantamount to an amusement park ride.

 The tram will indeed be a unique form of transportation between Camden and Philadelphia. While we expect that the ride itself will be entertaining, providing a unique view of the two waterfronts and the river, it will provide timely and all-season transportation to tourists and local residents alike. For example, the tram has been cited as critical to the development/conversion of the Nipper Building in Camden, enabling its future residents to have ready access to Philadelphia.
- c. There is much concern about the operation of the tram in different weather extremes.
 Safety of customers and employees continues to be of paramount importance to the DRPA in every facet of its operations. The tram would not be operational during periods of excessive wind or during thunderstorms, due to normal safety concerns. We believe that these infrequent occurrences would not greatly inconvenience our customers. Since the gondolas and passenger waiting areas will be enclosed, passengers can expect continuous service on a year-round basis, something not now possible with other venues.
- d. DRPA should focus on its core mission which is to expand PATCO operations. DRPA's Mission Statement reads as follows: "The Delaware River Port Authority is a self-financing, bistate authority whose mission is to manage, plan and construct transportation facilities and provide transportation services to maximize the safe and efficient movement of people and freight within the Port District. The DRPA will perform this mission with the intent of improving competitiveness and the climate for economic growth within the Port District. The DRPA will accomplish this purpose through continued investments that sustain and enhance its core business—bridges and PATCO—and that support expansion into economic development, ports, and related transportation businesses." We believe that the construction and operation of the tram fits well within the scope of our mission, as applied to "...the safe and efficient movement of people... within the Port District". While the safe, efficient and

timely operation of PATCO is also well within our mission, the **expansion** of PATCO is not mandated.

The agency should be addressing other, more timely transportation issues. Since the beginning of this year, DRPA has been involved in many critically important and timely transportation activities, including the following: DRPA took over operation of the RiverLink Ferry service; DRPA began repainting the Benjamin Franklin Bridge, one of the largest construction projects in our history: DRPA, in cooperation with NJDOT, has demolished buildings on the south side of Admiral Wilson Blvd and worked to develop a business plan for redevelopment of the boulevard's north side; Gov. Whitman broke ground for the South Jersey Light Rail Line linking Camden and Trenton. DRPA is working to coordinate passenger transfers between the new transit system, the tram, and PATCO; DRPA initiated weekly cruise service from Philadelphia to Bermuda, making the Delaware River home port to a cruise ship for the first time; DRPA received an award from the National Minority Supplier Development Council of PA, NJ, and DE for its efforts to encourage and teach small businesses to compete for government contracts; DRPA Commissioners agreed to join the team bringing the USS New Jersey to the Camden Waterfront; DRPA distributed its 100,000th EZ Pass tag, largely eliminating congestion at our four bridge plazas; DRPA has completed its program to make PATCO one of the first transit systems in the country to be ADA compliant; and in addition our SmartBridges program, DRPA is working with the DVRPC ITS Coordinating Council and Task Force to improve congestion management in this region.

Again, thank you for this opportunity to address these comments.

Pennsylvania Subregion

Agency: PennDOT Central Office

Response to Requests for Noise Walls (ID #22, 52)

The Pennsylvania Department of Transportation (PennDOT) noise abatement policy is currently limited to construction of warranted noise barriers, as part of a highway project on new alignment or for a major reconstruction project with additional travel lanes. There is no federal guidance requiring the construction of noise barriers on existing highways, nor are there federal funds for these projects.

There has been two occasions when state legislators earmarked motor license funds for PennDOT to conduct demonstration projects addressing noise abatement problems along existing highways. However, these are demonstration projects only, and are not intended to change or alter the current policy concerning noise abatement in the Commonwealth.

Agency: PennDOT District 6

Response to Ed Sabol (ID# 31)

Route 422 Projects
 The Department of Transportation welcomes comments provided. The information will be disseminated within the department for consideration as the TIP projects, referenced in your letter, advance to construction. This material will be used to also guide our

planner's as future TIP's are developed.

Response to Helen Marshall (ID# 33)

Route 422/Route 724 Traffic Signal
 Traffic signals in Pennsylvania are an ownership and maintenance responsibility of the municipality. Request for a traffic signal at this intersection must be initiated by North Coventry Township and forwarded to PennDOT to determine if a signal is warranted.

Response to Various Citizens, (ID# 42, 43, 44, 45, 46, 47, 48, 49, 50,51)

PA 41 (TIP #6719)
 PA 41 is currently in Preliminary Engineering, alternative analysis phase. The cost reflected in the later FY of the Draft TIP, is a carry over from the current FY 1999-2002 Program. Changing construction estimates prior to a Record of Decision serve no purpose.

Response to Oral Comments (ID# 52)

Blair Mill Road Widening (TIP #8369)
 Blair Mill Road is currently in Preliminary Engineering, alternative analysis phase.
 Comments provided by the public through meetings and/or public hearing are considered as part of the Preliminary Engineering process. The department will work with the Montgomery County Planning Commission to improve dissemination of public notices regarding future opportunities to participate in the process.

Response to Lower Moreland Township (ID #24)

PA 63, Woodhaven Rd. (TIP #9332)

PennDOT continues to analyze and update traffic projections for this project. Additional public meetings to discuss project alternatives are anticipated during Fall 2000. Any funding needed to complete the EIS or initiate additional phases of work must be identified on an approved TIP. The ROW and CON funds reference in the Later FY's of the TIP have no influence or bearing on the selection of a preferred alternative.

Agency: Bucks County Planning Commission

Response to Chalfont Borough (ID #19)

In response to the comments submitted by Chalfont Borough, the Bucks County Planning Commission offers the following comments.

The first project which the borough has requested to be included within the FY 2001 Transportation Improvement Program is the extension of Bristol Road. This project is currently on the existing TIP, under the id of # 5732. In regard to the remaining projects submitted by the borough for TIP inclusion, we recommend that the borough submit these projects to the county planning commission to be included in the county's TIP. As part of updating process of the regional TIP, transportation improvements are recommended to be submitted to the individual counties, who then make recommendations as to which projects within their jurisdiction should be submitted for inclusion within the regional TIP. Although we feel these projects submitted by the borough have merit, the county planning commission

has never received any of these improvements from the borough in the county's TIP updating process. Therefore when the planning commission updates its TIP in the summer of 2001, we would recommend that the borough include these improvements with their submission.

Agency: Delaware County Planning Department

Response to DVRPC Regional Citizens Committee (ID #12)

- Chester Creek Bicycle/Pedestrian Trail (TIP #7879) In this case, SEPTA and Delaware County agree that transit potential for this right-of-way is extremely low, so the proposal is for converting the rail right-of-way into a trail. Constructing a trail in the vicinity of the rail grade would increase the cost and might not be feasible due to the steep slopes in the Chester Creek valley. Delaware County has a significant shortage of parkland and recreation facilities, making this project a high priority for the County.
- McDade Blvd. Signal System (TIP #D26)
 Thank you for your support.

Response to Delaware Valley Goods Movement Task Force (ID #16)

- I-95/US 322 Interchange Improvement Study (TIP #D23)
 We recommended that the title of the project be changed to *I-95/Conchester Highway Access Study* (to include the former Highland Avenue Extension project) and the description include mention of the need for improved access to the CSX automobile terminal.
- Lloyd St. Bridge Replacement (TIP #D21)
- Chester City Access Improvements (TIP #D25)
 We agree that the Chester City Access Improvements projects is vital and we will continue to pursue this project until it is completed. The Lloyd Street bridge project will become less critical when the Access Improvements project is completed, because the latter project will improve truck access at other locations and create a truck access system more usable than via Lloyd Street.

Response to Tri-State Citizens' Council on Transportation (ID #28)

The West Chester Pike corridor had trolley service and now has frequent bus service. If there is a corridor in Delaware County which would be a candidate for rail service, this is it. We will consider your suggestion in the context of Delaware County's transportation priorities.

Response to Illy Sobel (ID #30)

We agree that transit service needs to be provided on Route 202 between West Chester and Wilmington. We are participating in the Route 202 land use study with DVRPC and Chester County, which we hope will result in revised municipal plans and ordinances that encourage transit- and pedestrian-friendly land use and pedestrian facilities along the corridor. Municipal actions, incorporation of transit and pedestrian facilities into the Route 202 project, and funding from the state of Delaware are the major ingredients in the return of transit service. We will pursue all of these strategies, in cooperation with Chester County, PennDOT, SEPTA, and the local governments.

Agency: Montgomery County Planning Commission

Response to Lower Merion Township (ID #21)

Rock Hill Rd./Belmont Ave. Corridor Improvement Program
 We support the project's inclusion as proposed for local engineering and right-of-way.
 These improvements must also be coordinated with and involve the City of Philadelphia as it impacts the Green Lane Bridge and access to the City.

Response to Representative Connie Williams (ID #22)

Noise Walls

The funding for these involve special state capital budget funds and should be pursued through those means.

Response to Upper Dublin Township (ID #25)

- Limekiln Pike/Susquehanna Rd. Corridor Improvement Project
- Dreshertown Rd. Improvements
 These should be pursued through the normal TIP process for consideration in the FY2003 update.

Response to Narberth Borough (ID #26)

 Rockland Ave. Bridge
 We support its inclusion in the draft TIP with the engineering and right-of-way provided by the borough.

Response to Towamencin Township (ID #27)

Multipurpose Trail

We support the project but concur with the PA Subcommittee that with CMAQ funds being the source for construction that it is best to apply for the competitive CMAQ program in 2001.

Response to Ed Sabol and Joseph Messina (ID #31, 32)

Improvements to PA-23/US-422 and North Gulph Rd.
 We concur that the 23/422 interchange needs work and it will be studied as part of the PA-23 relocation project being engineered by Upper Merion Township. We also concur that North Gulph Road, near PA-23, needs widening and it will be pursued in future TIP updates.

Response to Oral Comments (ID #52)

- New Ramps from PA Turnpike to PA-63 near the Prudential Business Campus
 This area has been identified for potential electronic toll ramps and will be studied in the future.
- Blair Mill Road Widening (TIP #8369)
 The draft EIS will be available by the fall with a public hearing scheduled shortly thereafter. The staff of the Planning Commission has supported the need to improve this corridor for 15 years. The staff will review and comment on the draft EIS at the appropriate time and will consider the impacts of the widening on the residential areas.

Response to Lower Moreland Township (ID #24)

PA-63, Woodhaven Rd. Project (TIP #9332)
 We do not support the removal of the project until the DEIS is released. The alternatives are being re-evaluated to respond to concerns by the township and the public. The project should remain in the TIP until the Record of Decision is issued after the DEIS public hearing process.

Agency: Philadelphia Department of Streets

Response to Delaware Valley Goods Movement Task Force (ID #16)

Delaware Ave Extension (Richmond to Allegheny)
The Department, in conjunction with the City Planning Commission, is currently
undertaking a land use study of the Northeast Waterfront. This link is included in the
study area. We are also negotiating with PaDOT about how to program this. It was a
project in our recommended '01 TIP but we pulled it due to the lack of agreement with
PaDOT. We hope to have this placed on the TIP as an amendment in the near future
once the funding issues are resolved with PaDOT.

Response to Lower Merion Township (ID #21)

• Rock Hill Rd/ Belmont Ave. Corridor Improvement Project This is literally the first the City has heard of this project. We have discussed the I-76 Belmont Ave/Green Lane interchange with Lower Merion in the past with no resolution. Any work on the Township side will have a major impact on the Green Lane Bridge and already congested Manayunk intersections on the City side of the Schuylkill River. We would challenge any inclusion of construction funding for this project in the TIP until the Township meets with both PaDOT and the Department on the related issues at this location. We would accept the placement of design and right-of-way funding in the TIP at this point in time, however.

The work as proposed (and it is not easy to ascertain what exactly the project includes) would apparently solve problems on the Township side of the River but may also push some other problems to the City side. It appears that considerable work is planned west of I-76 but nothing is mentioned for the Green Lane Bridge or east of I-76. This will not address the operational problems currently experienced at this location. A more appropriate solution would be the inclusion of the entire area which could be a joint Township/PaDOT/City project.

Response to Various Citizens (ID #34, 35, 36, 37, 38, 39, 54)

Philadelphia Bicycle Network Phase II In the '99 TIP the Department programmed a \$2 million project titled Bicycle Network 2 as a follow-up to our \$3.7 million Bicycle Network project included in the '97 TIP. Our intent was to have the second project fund improvements which could not be covered in the first effort. Since then, a few things have happened. For one, budgetary support to provide the local match has not been forthcoming as all City agencies are not in agreement on the direction and extent of bicycle accommodation in the City. Despite our appeals at various levels of City government (including the Mayor and City Council), we could not secure more than a nominal amount in the City Capital Program to fund the

Network projects. Secondly, we found other ways to implement the measures, mainly through ongoing street improvement and resurfacing contracts (in both PaDOT and our own projects).

While this handled the lane striping, signing, and route map printing aspects, we determined that we could not fully address the public education/outreach and bike rack portions of the project as we had originally planned. We had also looked to the City administration to determine whether a bicycle coordinator position or office would be created within City government to handle these issues. To date, this has not been done. We have developed an interim plan to perform this and a TIP amendment has been requested to fund this effort.

Despite rumors to the contrary, the City has not abandoned its bicycle effort and is still aggressively pursuing the completion of the Bicycle Network. The request to delete the Network 2 project was merely an attempt to free funds for projects which have internal budgetary support, many of which do include bicycle-related items. If the Network 2 project were retained as is, the funding would most likely have been tied up and unusable, harming both our own efforts to program projects as well as the entire region given current fiscal constraints on the TIP.

We are also in the process of development of a bicycle coordination and evaluation project (a TIP amendment has been requested and is on the 7/11 meeting agenda). This should represent our continued commitment to bicycles. Our approach has been and will be to treat the bicycle as one more transportation mode with the intent that special needs, etc of this mode will be considered in all future transportation projects.

Response to Various Citizens (ID #29, 55)

Krewstown Rd. Bridge (TIP #9345)

The Department is aware of the change in State legislation that removes PaDOT funding from a bridge replacement project. Due to the many geometric and physical constraints associated with the existing bridge, any retention of it will be difficult. However, we are exploring the alternatives as part of the current environmental assessment study/impact analysis currently underway. The draft of this effort is being reviewed by PaDOT. It is our hope that this will help us determine the best course of action for this project and we intend to have this step completed by this fall.

The project is currently listed as a bridge replacement. We would agree to add '/rehabilitation' into the scope to cover the possibility (which, in reality is very unlikely, however) that the bridge can be rehabilitated. Again, we will not know the answer until the noted study is completed.

Response to Various Citizens (ID #40, 41)

• School House Lane (TIP #9555)

The current TIP description is accurate. The road will be widened to accommodate shoulders in each direction. The existing roadway varies in width from 22 feet to 30 feet. Our intent is to create a consistent 28-foot cartway width. This has been reviewed with citizens' groups at numerous public meetings. The wider cartway will operate as 1 lane directional, the same as the current roadway, thus no capacity will be added.

The Ridge Avenue intersection will be slightly realigned to provide a better geometric situation for traffic. The current intersection is a very flat angled one and movements to and from the south between Ridge Avenue and School House Lane are very difficult even with automobiles. This will be modified to be closer to a 90-degree intersection. Sidewalks will be added to accommodate pedestrians, who have no such facility today and are thereby forced to walk in the School House Lane roadway.

Response to DVRPC Regional Citizens Committee (ID #12)

Eastwick Transportation Center (TIP # S071)
This should remain in the TIP. The US Postal Service is considering the construction of a new Main Postal Facility for the region on Lindbergh Boulevard approximately ½ mile from the Center. The Center would offer unique transit access for the 4,000-plus employees at the Postal Facility (which would replace the 30th Street Postal Facility). The Postal Service estimates that between one-third and one-half of these employees could use transit. This represents employees working among three shifts around the clock. Thus, these figures should be factored into the Center's ridership and usage if possible.

Response to Lower Moreland Township (ID #24)

PA 63, Woodhaven Road (TIP #9332)
 The project should remain on the TIP in its current schedule. The DEIS is scheduled to be released early in 2001 according to the latest information the Department has received from PaDOT.

Agency: SEPTA

Response to DVRPC Regional Citizens Committee (ID #12)

- 30th Street Station Intermodal Gateway (TIP #9746)
 This is a joint initiative between the City of Philadelphia and Amtrak. Those agencies should respond.
- Alternative Fuel Project (TIP #0537)
 SEPTA has received bids for this project and is negotiating with the companies that submitted bids. It is expected that a recommendation to award a contract will be made to the SEPTA Board of Directors in the very near future.
- Amtrak Harrisburg Line (TIP #PA01)
 PADOT and Amtrak joint initiative. Those agencies should respond.
- Station Accessibility (TIP #S014))
 All new regional rail cars will be accessible. The experience with wheelchair lifts on buses has been less than favorable. The expense to retrofit a fleet of over 350 rail vehicles with wheelchair lifts would be significant. Furthermore, it would be difficult and time consuming to retrofit such a large number of vehicles as an 'interim strategy' rather than providing accessibility at stations.
- Rail Stations and Parking Program (TIP #S060)
 Many SEPTA customers use the Jenkintown and Glenside stations due to the higher frequency of service at these stations. For example, the Jenkintown station is served by the West Trenton, Warminster and Lansdale/Doylestown trains and the Glenside station

is served by the Warminster and Lansdale/Doylestown trains. Some of SEPTA's customers choose these stations over stations such as Noble, Rydal, Meadowbrook, North Hills and Oreland due to the higher frequency of service resulting from multiple train lines serving these stations. Therefore, SEPTA is evaluating the construction of parking garages at key locations.

- Eastwick Transportation Center (TIP #S071)
 SEPTA is evaluating different alternatives and locations to serve the rapidly growing area surrounding Philadelphia International Airport. At the completion of the study, SEPTA will forward a proposal for approval.
- Schuylkill Valley Metro (TIP #S074)
 The SEPTA Board of Directors selected the MetroRail alternative at the June 22, 2000
 SEPTA Board Meeting. SEPTA has requested DVRPC to initiate the process to add this project to the Region's 2020 Plan.
- Elwyn-Wawa Rail Improvements (TIP #SEP01)
 As part of a preliminary engineering analysis, the costs will be further refined. The updated cost estimates will be reflected in the SEPTA Capital Budget and the TIP.
- Paoli Transportation Center (TIP #S080)
 In response to the resolution adopted in April 1997, SEPTA will further define the scope of work and cost estimates as part of the preliminary engineering process. The Authority is closely working with major stakeholders on this project including PADOT, Amtrak, Chester County, and local municipalities on the various elements of the project including both transit and highway improvements.
- Regional Rail Car Acquisition (TIP #SEP03)
 Customers' views will be considered during the planning process of this project.
- Cross County Metro (TIP #S031)
 The Major Investment Study is being updated to reflect recent changes and public participation will be part of the update process.

Response to Tri-State Citizens' Council on Transportation (ID #28)

As part of the Authority's long range capital plan, SEPTA is not planning for the extension of the Market-Frankford Elevated to the Blue Route, Route 66 to Franklin Mills, Route 29 to Grays Ferry Avenue or Pier 70, Route 79 to Pier 70 or the Streetcar loops noted in comments. The restoration of light rail service on Route 56 is included in SEPTA's 12 year capital program. A feasibility study of a historical trolley loop has been recently completed.

Agency: DVRPC

Response to Various Citizens (ID #42, 43, 45)

PA 41 (TIP #6719) Conformity Issues

Several comments were received regarding why TIP project # 6719 (PA 41, Delaware State Line to PA 926) was exempt from the conformity analysis. The conformity analysis is required to include all regionally significant, non-exempt projects in areas not conforming to the National Ambient Air Quality Standards (the entire DVRPC region is in nonattainment of the ozone standard). Although individual projects in the Long Range Transportation Plan and TIP (which is drawn from the Plan) may increase emissions of

pollutants, the Plan and TIP, in their entirety, show a decrease in emissions over time. All projects in the TIP, including new road capacity, are able to move forward towards construction as long as the State Implementation Plan (SIP) and conformity analysis have been approved by the USEPA and USDOT.

Project # 6719 is a study that will look at various alternatives to reducing congestion and improving traffic flow on PA Route 41. The study will address a range of alternatives including realignment and widening. However, no alternative has been selected to date and consequently it is not possible to model an improvement which has yet to be chosen. Therefore, this project (and all other studies in the TIP) is not required to be part of the conformity analysis.

Responses to Various Issues

A number of comments were made which are more general in nature or concern the TIP process, some of which were expressed by more than one person or group. DVRPC provides the following responses:

- Studies
 - A number of people commented about studies that are either ongoing or that they think should be advanced. DVRPC has included in the TIP a listing of major studies that are ongoing by either our staff or by one of our partner agencies. This list will be updated and will appear in the final version of the TIP. Other studies that are newly being suggested will be referred to the DVRPC Work Program Committee for further consideration as the annual regional unified planning work program (UPWP) is being updated.
- New TIP Projects
 - Often members of the public, and even some municipal officials, will include in their comments a request to add a project to the TIP. It is DVRPC's policy to refer these comments to the respective county. If the project has been the result of prior study and negotiations, and if a source of funds has been identified and there is clear evidence of official support from the local jurisdiction, then the project may be considered for inclusion in the TIP by the Board upon the recommendation of the Regional Transportation Committee and the appropriate RTC subcommittee. However, without such prior study and evidence of commitment to the project, these comments are generally referred to the appropriate agency for future consideration. This was explained in the TIP document under the Public Comment section.
- Pedestrian/Bicycle/Transit Considerations Comments were made concerning the need for consideration of pedestrians, bicyclists and transit vehicles in the design of highway projects. All projects are designed according to official state and federal design standards. These standards continue to evolve to address safety issues. Furthermore, the states have established policies and procedures to guide project development. These also evolve so that special considerations (potential shared use by bicycles, noise abatement, etc.) become part of the normal project development process. Since these standards, policies and procedures exist, there is no need to repeat them in each project description. Where the specific project scope includes special features, it will be noted.

Programming of Future Construction Funds Concern is often expressed over the presence of funds in the TIP for the construction phase of a project when there is great controversy over the design of an appropriate alternative or questioning if the project should be built at all. The process by which a project seeking federal funds is to be developed (which is generally the same for a state funded project) establishes a number of check points that must be passed before the project can proceed to the next phase. DVRPC programs projects in the TIP on the assumption that all the necessary requirements will be met along the way. However, we require project sponsors to provide estimates for all phases, even if they are in years beyond the TIP period. While we acknowledge that the scope of the project may change as the project development process proceeds, nevertheless, we believe it is best to show a complete estimate of the potential future costs for the project. Future right-ofway and construction cost estimates are shown to inform the public and capital budget officials of future potential capital needs; they are not an explicit endorsement of a particular alignment or design; nor are they an outright commitment or allocation of funds. Each phase may only proceed when the prerequisites have been met.

FY 2001 Transportation Improvement Program for Southwestern New Jersey and Southeastern Pennsylvania

Volume IV - Public Comments and Agency Responses

Publication Number: 00010

Date Published: September 2000

Geographic Area Covered: Delaware Valley Region

Key Words: Public Outreach, Title VI of the 1964 Civil Rights Act, Transportation, TIP, Highways, Transit, Bridges, Congestion Mitigation and Air Quality Improvement Program, Transportation Enhancements Program, Transportation Equity Act for the 21st Century, New Jersey Department of Transportation, Pennsylvania Department of Transportation, NJ TRANSIT, SEPTA, DRPA/PATCO, Federally Funded Projects

ABSTRACT

This document includes (1) a description of the TIP public involvement process, including how DVRPC has met the requirements of Title VI of the 1964 Civil Rights Act, (2) copies of the comments received by both DVRPC member agencies and the public, and (3) agency responses to the public comments.

OVER WISSAHICKON CREEK

065L002

BRIDGE REPLACEMENT

AQ Code X

Northwest Phila.

The northbound lane of this two lane bridge is currently closed to traffic. The superstructure was built in 1920 and the piers in 1786. It will be replaced with a bridge with two 12' lanes, 6' shoulders, sidewalk on one side, and a pedestrian/bicycle/equestrian trail on the other side. The project also includes roadway realignment to remove a sharp curve and visual mitigation.

Northeast Phila., Lower Moreland Twp.

This project involves an EIS with three alternatives: (1) no build, (2) widening the existing Byberry Rd. including extending the Woodhaven Expressway to Byberry Rd., and (3) extending Woodhaven Rd. from its current terminus at Evans St. to Philmont Ave. The limited access road would be four lanes (two lanes in each direction) from Evans St. to Bustleton Ave. and two lanes (one lane in each direction) from Bustleton Ave. to Philmont Ave. A partial diamond interchange will be constructed at Bustleton Ave.

BRIDGE REPLACEMENT/REHABILITATION

AQ Code X

Northeast Phila.

The existing bridge is a narrow two lanes with a 5' sidewalk on one side. It is currently load restricted to 20 tons. The new bridge will be on a new alignment to correct the poor horizontal and vertical geometry. It will be two lanes with shoulders and sidewalks on both sides. The existing bridge may be kept as a pedestrian/bicycle/equestrian trail.

This project involves the construction of a bikeway and trail along Main St. in Manayunk, the Manayunk Towpath, and the former Pennsylvania Railroad roadbed. It will provide a link to the existing paths on East River Dr. (at Ridge Ave. and Wissahickon Creek) and the Valley Forge Bikeway (at Port Royal Ave.).

BRIDGE REHABILITATION (ENG. COST #9684A)

AQ Code X

West Phila.

The existing bridge has two lanes with a center left turn lane and 8' sidewalks on both sides. It will be replaced with a four lane bridge with a center left turn lane, 5' bike lanes on both sides of the road, and 5' sidewalks. The project also includes improvements to the l-76 off-ramps, visual mitigation, and detour route improvements.

Transportation Management Associations

MPMS# 48199

AQ Code X

The Pennsylvania portion of the region has formed a number of Transportation Management Associations (TMA) that help the region address demand for the region's transportation system. By assisting with the formation of car and van pools, working with employers to initiate ridesharing programs for their employees, seeking corporate sponsorship of subscription bus services, etc., the TMAs help to lower the need for new highway capacity. The TMAs had been funded by PennDOT in the past. PennDOT has now requested that the region fund these programs using CMAQ funding.

DVRPC Competitive CMAQ Program - 2

MPMS# 48201

TEA-21 Round 2

AQ Code X

The Congestion Mitigation and Air Quality Improvement Program (CMAQ) was established by ISTEA and is continued under TEA-21. CMAQ funds are allocated to the states for use in non-attainment and maintenance areas for projects that contribute to the attainment of the Clean Air Act standards by reducing emissions from highway sources.

Types of projects that are eligible for CMAQ funding include bicycle and pedestrian facilities; traffic flow improvements; ridesharing and other demand management programs; alternative fuel vehicles; and public transit improvements.

Candidate projects will be submitted to DVRPC and reviewed by a CMAQ oversight committee for initial eligibility and general merits. Projects that survive this screening process will then be subjected to an air quality emissions analysis. All projects must show a reduction in emissions using PennDOT standardized tests to remain eligible.

Based on their emissions reduction potential, as well as other criteria such as costeffectiveness, ease of implementation, project readiness, and sponsor commitment to provide matching funds, candidate projects will be ranked and then selected by the DVRPC Board for inclusion in the TIP.

Round 2 of the CMAQ program reserves \$25 million of federal CMAQ funds for the TIP period, to be matched by at least \$6.25 million from Local funds. (Programming for Round 1 is shown in TIP #O10).

This project will provide for an expansion of DVRPC staff to assist PennDOT in the implementation of non-traditional transportation projects. The assistance will generally involve facilitation and coordination among the projects' applicant, PennDOT district staff, PennDOT central staff, and FHWA. Staff will consist of a section manager and two to four project managers.

MPMS# 0

TRACK AND SIGNAL IMPROVEMENTS

AQ Code X

This project provides for the upgrade of 7.5 miles of track and signals on SEPTA's commuter rail Main Line between Wayne Junction in the Germantown section of Philadelphia and Glenside in Montgomery County. Project elements include the construction of new motor alternator substations for the generation of signal power; the upgrade of the signal system between Wayne Junction and Glenside; the rehabilitation and reconfiguration of four major interlockings (Newtown Junction, Tabor, Jenkintown, and Carmel); tie renewal; drainage improvements; and other civil work between all interlockings.

69th Street Shop

AQ Code X

This project provides for the demolition and replacement of the Market-Frankford 69th Street Car Maintenance Shop and improvements to the adjacent railcar storage yard. The new facility will provide for efficient maintenance of the new M4 car fleet. Improvements include: 1) construction of new yard tracks to better maintain, service, repair and inspect the subway cars; 2) structure modifications to accommodate the maintenance of the heating and air conditioning systems of the new cars; 3) construction of new welding, steam cleaning, truck repair and centralized storage back shops; 4) construction of new offices, lockers, classrooms and lunchroom facilities; 5) electrical improvements in the shop; 6) construction of a new stinger system to provide traction and vehicle power for the M4 cars while in the shop; 7) total renewal of the railcar storage yard; and 8) a new exterior carwash unit

CAPITAL ASSET LEASE PROGRAM

MPMS# 0

AQ Code X

The Capital Asset Lease Program provides for lease payments attributable to the acquisition, through financial leasing arrangements, of the following capital assets: utility vehicles, Philadelphia fixed rent, tire leases, computer and copier leases, 30-foot buses, the Trent tower, and lease payments made to Amtrak by SEPTA for corridor access and operation on Amtrak's Northeast Corridor (Trenton, NJ to Wilmington, DE) and Harrisburg Line (Downingtown, PA to Center City, Philadelphia, PA). The lease payments to Amtrak represent SEPTA's allocated portion of Amtrak's cost to maintain and upgrade the right-of-way including protection of assets, maintenance and general administrative overhead.

TIP# S011 UTILITY FLEET RENEWAL PROGRAM

MPMS# 0

REPLACEMENT OF NON-REVENUE VEHICLES

TO SUPPORT TRANSIT & RR OPERATION

AQ Code X

The Utility Fleet Renewal program is a comprehensive effort to upgrade and replace the utility fleet and automotive fleet. In order to have adequate and reliable utility vehicles, SEPTA has developed a program to periodically renew this fleet on a vehicle by vehicle basis, contingent on the vehicle's age, condition, and usage. The utility fleet is comprised of the following types of vehicles: (1) utility vehicles for transit supervisors, SEPTA police officers, paratransit support, and operations support services, (2) utility vehicles for the fixed plant maintenance of buildings, overhead power systems, catenary, communications systems, signal systems, track, and roadway, (3) transport vehicles used in garages, shops, and operations support, and (4) service vehicles used for the maintenance of vehicles.

STATION ACCESSIBILITY PROGRAM

MPMS# 0

MODIFICATIONS FOR ADA COMPLIANCE

AQ Code X

This project will provide for modifications to improve system access at selected railroad and rail transit stations. In accordance with federal regulations, SEPTA has implemented a key station plan whereby accessible facilities are provided at SEPTA's 42 key rail stations. Regional Rail Stations: R1 (Terminals A/B, C/D, E, University City); R2 (Warminster, Roslyn, Chester Transportation Center, Wilmington); R3 (Media, Morton, Neshaminy Falls, Bethayres, Forest Hills); R5 (Exton, Radnor, Ambler, Pennbrook, Lansdale, Doylestown); R6 (Elm Street, Spring Mill, Ivy Ridge, Bala); R7 (Trenton); R8 (Chestnut Hill West, Queen Lane, Fox Chase); and Temple University and Market East on the Regional Rail Division Main Line. High Speed Stations: 69th Street Terminal, 30th Street, 13th Street, 8th Street, Bridge-Pratt Terminal on the Market-Frankford Line, Cecil B. Moore, Olney, Pattison, and Walnut-Locust on the Broad Street Subway Line. Route 100-NHSL: 69th Street Terminal and Norristown Transportation Center. Funds will support improvements to the following key stations: Market-Frankford stations at 30th, 13th, and 8th Streets. 13th St. will include improvements at Juniper St. station.

SEPTA

TIP# S023 MARKET ST. ELEVATED RECONSTRUCTION PROG.

MPMS# 0

45TH ST. TO EAST OF 69TH ST.

REHAB. OF DETERIORATED STRUCTURES

AQ Code X

West Phila., Upper Darby Twp.

The Market Street Elevated Reconstruction Program will provide for the complete reconstruction of the Market Street Elevated superstructure, sub-structure and foundations, and the rehabilitation of abutments and bearings. Passenger stations located at 46th, 52nd, 56th, 60th, 63rd Streets and Millbourne Station will be completely reconstructed and will comply with the requirements of the Americans with Disabilities Act.

This reconstruction effort will be undertaken through a single column bent approach. The single column bent approach offers substantial benefits to SEPTA and the community, including fewer columns which will reduce maintenance costs and improve the aesthetics of West Market Street; improved lighting at street level; and safer pedestrian crossing and bus boardings, as passengers will no longer be required to cross traffic to board buses. In addition, this construction effort will complement and assist in the City's Streetscape Plan which proposes to convert Market Street into a two lane road with bike lanes.

BUS PURCHASE PROGRAM

MPMS# 0

AQ Code X

This project provides for the purchase of 200 low floor buses. The new buses will replace 200 fourteen to fifteen year old 40-foot buses which are beyond their useful life of twelve years. All buses will fully comply with the Americans with Disabilities Act (ADA) requirements. Each bus will have a public address system that will enable the operator to clearly communicate with passengers inside and outside the vehicle. For the hearing and visually impaired, an audio/visual annunciating system will be installed, which will automatically announce upcoming bus stops and informational messages.

The Bus Purchase Program also provides for necessary spare components, tools and equipment required to properly service the buses.

SIGNAL SYSTEM

AQ Code X

Philadelphia City

This project provides for improvements to the Broad Street Subway Line (BSS) signal system which dates back to 1928. The project will provide for a replacement in-kind of the existing wayside signal system including local wiring, trunk vital signal and power cables, and signal cases. It will also provide for operational and safety enhancements including 1) upgrading remaining electric-mechanical relay-based interlockings with micro-chip processor control technology; 2) allowing for remote control and real-time monitoring of operations from the control center; and 3) reconfiguring track signal circuit control lines for additional braking distance protection to enhance safety operations. The improvements included in this replacement in kind option will provide a safe, reliable signal system for the Broad Street Subway operation.

AQ Co	de X	
		The Cross County Metro will provide circu

The Cross County Metro will provide circumferential transit service from the vicinity of Morrisville, Bucks County to Glenloch, Chester County, traversing Montgomery County. This line is intended to fill a key missing link in the provision of public transportation service in southeastern Pennsylvania by providing for inter- and intra-suburban trips to shopping, industrial/office and residential concentrations. At the same time, the Cross County Metro will facilitate intermodal connections to SEPTA's existing, radial commuter rail and transit services; potential park and ride lots located along the Pennsylvania Turnpike and US Route 202; as well as feeder bus service between the proposed stations and nearby development concentrations. These connections and intermodal opportunities will enhance the regional mobility choices of Suburban and City residents. A Major Investment Study and Draft Environmental Impact Study was completed in June of 1998. A revision to the Major Investment Study and Draft Environmental Impact Study will be completed in mid-2000.

FRANKFORD TRANSPORTATION CENTER

MPMS# 0

AT BRIDGE-PRATT TERMINAL

RECONSTRUCTION

AQ Code 2015/200

Northeast Phila.

This project provides for the construction of a new transportation center at the Bridge-Pratt Terminal and the realignment and reconstruction of the elevated structure between Dyre Avenue and Bridge Street. The construction of the Frankford Transportation Center will consolidate the Market Frankford Line and surface route operations and commuter parking into one concentrated area. Pedestrian and vehicle traffic, and transit movements will be integrated to minimize movement conflicts and facilitate passenger access and transfer activities. Major construction elements of this project include: 1) a new terminal building complex, the rehabilitation of the historically significant Bridge-Pratt Terminal, and the reconfiguration of the bus berths and access lanes; 2) modification and reconfiguration of the Frankford Bus Depot; 3) construction of the Pratt Street building, which will house the train control room for the Market-Frankford Automated Train Control Project; 4) construction of a new elevated guideway structure from Dyre Street to the Bridge Street Train Yard; 5) installation of track, signals, traction power and communications system; 6) reconfiguration of the Trackless Trolley Storage Yard; and 7) construction of a parking garage and a pedestrian bridge over Bridge Street.

TIP# S052 CITY HALL STATION

MPMS# 0 ON BROAD STREET SUBWAY LINE

REHABILITATION

AQ Code X Philadelphia City

This project will provide for the engineering and rehabilitation of City Hall Station on the Broad Street Subway Line. Preliminary and final engineering for this project will undertake the following tasks: 1) analyze pedestrian flow during peak and off peak hours and develop strategies to streamline passenger traffic, 2) develop design scenarios to introduce light and fresh air into station areas and walkways, 3) design improvements for the passageways leading from the station's mezzanine level to the Market-Frankford Line, 4) determine repairs required to rehabilitate the station's structural components, and 5) convert the station into a modern, attractive, well illuminated, and fully accessible facility. The design of station improvements and repairs will be performed in coordination with the City of Philadelphia's "Master Plan for City Hall" and pre-design and structural studies performed by SEPTA.

CATENARY AND BRIDGE REPAIR

AQ Code X

This project provides for the rehabilitation of the section of SEPTA's Regional Rail Mainline between 30th Street Station and Suburban Station at 16th and John F. Kennedy Blvd. This one mile long segment of infrastructure is located in the Center City zone of Philadelphia. Originally constructed in 1929 by the Pennsylvania Railroad, this portion of the commuter rail system supports all of SEPTA's commuter rail routes. Every weekday, more than 500 trains traverse this segment of infrastructure.

The scope of work consists of the rehabilitation of seven bridges: (1) over 21st St., (2) over 22nd St., (3) over 22nd and 23rd Sts., (4) over 23rd St., (5) between 23rd St. and the CSX Railroad right-of-way, (6) over CSX right-of-way, and (7) over the Schuylkill River.

RAIL STATIONS AND PARKING PROGRAM

MPMS# 0

AQ Code X

This project provides for the rehabilitation of rail stations including parking, signage, lighting, station facilities and parking expansion. In total, there are 280 stations and 233 parking facilities which are maintained by SEPTA. While capital improvements to stations and parking facilities have been made in the past, this program will establish an annual plan to bring stations and parking facilities into a state of good repair. As part of this plan, SEPTA will aggressively pursue opportunities to expand parking availability in the five-county service area. Currently, there are 50 regional rail stations where parking facilities are 95 to 100 percent filled on a daily basis. Prior funding for parking expansion projects will resolve some of these parking limitations, but many more locations need to be addressed. By providing additional parking, SEPTA will be better able to attract new rail commuters, thus increasing the Authority's operating revenue and further assisting in the mitigation of traffic congestion and air pollution for the region.

TIP# S070 BROAD ST. SUBWAY STATION IMPROVEMENTS

MPMS# 0

WALNUT-LOCUST, GIRARD

AND SPRING GARDEN

AQ Code X

Philadelphia City

This project will provide for the engineering and construction of improvements to three stations on the Broad Street Subway Line. The stations to be improved are: Girard, Spring Garden, and Walnut-Locust on the Broad Street Line. These stations were originally constructed between 1928 and 1932 and are showing signs of disrepair and deterioration due to their age and use.

Station elements to be improved by this project include lighting; wall, floor and ceiling finishes; passenger amenities; signage; passenger control and cashier facilities; platform tactile warning strips; audio-visual public address system; and the installation of elevators. Materials installed at these stations will be easy to maintain, have a long life expectancy, and possess vandal resistant qualities. These improvements will convert the three stations into modern, attractive, well-illuminated, functional and secure transit facilities.

TIP# S071 EASTWICK TRA

EASTWICK TRANSPORTATION CENTER

MPMS# 0

IN VICINITY OF BARTRAM AVE. AND 84TH ST.

NEW R-1 STATION

AQ Code 2002M

Philadelphia City

This project will provide for the engineering and construction of a new transportation center and parking facility on the Regional Rail R1-Airport Line. The new Eastwick rail station will serve as a transit hub for the Eastwick and Airport areas. Surface transit routes, which will service the station, include the Route 37, Route 68, Route 108, and Route 305. These routes will circulate through employment areas both east and west of the airport.

A Phase I station at Bartram Avenue and 84th Street opened in December, 1997. The opening of this station coincided with the opening of the PNC Bank Operations Center. Conceptual engineering is being conducted to determine how the station should be developed into a multi-modal transportation center. As part of this effort, a needs-assessment and conceptual design study began in November, 1999 to quantify ridership demand and to obtain information on present and future joint development in the Eastwick vicinity, travel patterns, employment and residential development. This effort will also evaluate the merits of extending the Route 36 trolley line to the transportation center.

System Improvements

AQ Code X

This project will provide for the development, design and implementation of system improvements within the five county area and other selected projects that have been designated in SEPTA's Five Year Plan for Strategic Change. In SEPTA's Five Year Plan, capital improvements to the infrastructure are required in order to carry out many of the business goals and objectives of the Authority. System improvements are defined as projects which expand or improve operations, or which add new system capabilities or service. Projects being implemented under this program include, but are not limited to: 1) Audio Visual PA System for the Subway/Light Rail System; 2) Closed Circuit TV and Integrated Passenger Waiting Zones; 3) Gulph Mills Station Passenger Amenities; 4) Police Radio Dispatch System; 5) DATA network Infrastructure Upgrade; 6) Purchase/Installation of Change and Token Vending Machines; 7) Route 10 Transit First Improvements; 8) Philadelphia Historic Trolley Engineering; 9) Upgrade of Fare Collection Machines to accommodate new \$5, \$10, and \$20 bills.

MPMS# 0

RESTORATION OF LIGHT RAIL SERVICE ON

ROUTE 15

AQ Code 2002O

Philadelphia City

This project will provide for the engineering and construction of improvements for the Girard Avenue Light Rail Line (Route 15). This rail line, which was temporarily converted to a bus operation in 1992, runs 8.2 miles from Westmoreland and Richmond Streets in North Philadelphia to 63rd Street and Girard Avenue in West Philadelphia.

Improvements that will be made to the infrastructure on Girard Avenue include: 1) renewal of track and overhead wire facilities, 2) renewal and upgrading of the power supply system to accommodate power requirements of light rail vehicles, and 3) implementation of selected "Transit First" Improvements. To improve service reliability and speed, Transit First improvements will include exclusive transitway where possible, and improved transit stops designed to speed customer boarding/alighting and deter cars from illegally parking in the right of way. In addition, this project will provide for the retrofitting and modernization of bays at SEPTA's Callowhill vehicle maintenance facility to accommodate the storage and maintenance of light rail vehicles.

SCHUYLKILL VALLEY METRO

MPMS# 0

AQ Code 2015/20M

The proposed Schuylkill Valley Metro Line Corridor is approximately 62 miles long from the central business district of the City of Philadelphia through Montgomery and Chester Counties to the City of Reading and the Borough of Wyomissing in Berks County, Pennsylvania. A Major Investment Study and Draft Environmental Impact Statement was undertaken for this project. As a result of the study, the Board of Directors of SEPTA and BARTA have selected MetroRail as the Locally Preferred Alternative for the Schuylkill Valley Metro Project. MetroRail is an innovative approach that combines the speed, capacity and safety of commuter rail, with the operating efficiency, rider convenience and economy of light rail. MetroRail will use high level platforms at all stations, as well as subway-type quarter point doors, making boarding easier and faster for everyone. Because it will be accessible by wheelchair at every station, this transportation system will be available to persons with disabilities. The total estimated cost of the MetroRail project will be developed during the engineering phase.

PAOLI TRANSPORTATION CENTER

MPMS# 0

AQ Code 2005O

This project provides for the development, engineering, and construction of a new multimodal transportation center in Paoli, Chester County. The new facility will be located on the R5 Paoli/Downingtown Regional Rail Line west of the existing station. This station serves SEPTA and Amtrak trains and is one of the most heavily patronized SEPTA train stop outside of Center City. The project includes the construction of bus facilities, new commuter parking facilities, reconfiguration of access roads and entrances to the station, construction of new pedestrian linkages throughout the station area, construction of a new intermodal station facility west of the current location including, but not limited to, waiting area, ticket offices, passenger amenities, and accessibility improvements.

The highway components of this project are programmed in the Chester County section under TIP #6910.

TIP# S081 SURFACE COMMUNICATIONS SYSTEM WITH

MPMS# 0

AUTOMATIC VEHICLE LOCATOR

PILOT PROGRAM

AQ Code X

This project provides for the design and implementation of a Computer Aided Radio Dispatch (CARD) System, the design and construction of two control dispatch centers, and the installation of mobile radio equipment in all buses, light rail, maintenance, and supervisory vehicles (approximately 1,800 vehicles plus 400 portables). In addition, the infrastructure, including base stations and microwave links, will be installed to support this new wireless communications system. The primary control dispatch center for the CARD System will be located on the 19th floor of SEPTA's headquarters building at 1234 Market Street. The secondary and backup control dispatch center will be located within SEPTA's Market East Station.

This project will also provide for a pilot Automatic Vehicle Locator System (AVL) on approximately 50-100 City Transit Division buses. The AVL system will utilize Global Positioning Satellite (GPS) technology to signal bus locations to the control center. This pilot project will evaluate the effectiveness of such a system on improving the on-time performance of buses and the reporting and rectification of service problems.

FARE COLLECTION SYSTEM UPGRADE

MPMS# 0

AQ Code X

This project provides for the modernization and automation of SEPTA's fare collection process. SEPTA currently utilizes close to 60 different fare instruments and collection methods. Many of these instruments are beyond their useful lives making it difficult for SEPTA to completely control and account for its revenue stream. SEPTA will conduct a preliminary engineering analysis of the current fare collection system to develop a strategy for modernization and technological improvements to address problem areas and make recommendations for implementation. This project will also include the final engineering and construction phases of this modernization effort. New fare collection technology will attract riders to the system, reduce costs associated with revenue collection, increase revenue recovery, and facilitate more accurate gathering of ridership information.

TRANSIT ENHANCEMENTS

MPMS# 0

AQ Code X

As a provision of TEA-21, one percent of Section 9 formula funds distributed to SEPTA must be spent on transit enhancements. Eligible activities include historic preservation, rehabilitation, and related activities; bus shelters; landscaping and other scenic beautification including street lights; public art; pedestrian access and walkways; bicycle access including storage facilities and installation of equipment for transporting bicycles on transit vehicles; transit connections to parks; signage; and enhanced access to transit for persons with disabilities.

FY01 funds will be used to renovate Wayne, Devon, and Allen Lane Stations and for the Girard Avenue Streetscape Project.

Elwyn to Wawa Rail Improvements

MPMS# 0

AQ Code 2005M

This project will provide for the restoration of rail service approximately 3 miles between the existing R3 Media/Elwyn Regional Rail Line terminus at Elwyn, Delaware County, to a proposed terminus at Wawa, Delaware County. Service restoration will require new track between Lenni and Wawa, new signals, communications, structures, and construction of stations and parking facilities. Two stations are proposed: Wawa and Glen Riddle.

Regional Rail Car Acquisition

MPMS# 0

AQ Code X

This project provides for the acquisition of new rail cars for SEPTA's Regional Rail service. These cars will replace existing Silverliner II and III rail cars, which are currently 33 to 37 years old. This project will also provide for the acquisition of additional cars, which will supplement the regional rail car fleet in order to meet ridership increases. The total number of vehicles will be determined in the planning and design process of the project. Vehicles acquired through this project will include current technology and proven components, along with passenger amenities, to ensure overall safety, security and passenger comfort. All vehicles will comply with Americans With Disabilities Act requirements.

Regional Rail Substation Imp. Program

MPMS# 0

AQ Code X

This project provides for improvements to the traction power supply system for SEPTA's Regional Rail Service. The first facility to be addressed is the 30th Street Switching Station in Amtrak's Penn Coach Yard. This substation, which is over 70 years old, currently distributes traction power to SEPTA catenary circuits at Zoo Interlocking, Arsenal Interlocking, Powelton Avenue Yard, Suburban Station and the Center City Commuter Tunnel. A new switching station will be constructed in SEPTA's Powelton Yard to replace the old substation. Replacement of this substation will rectify the power interruptions caused by this aged facility. The second facility to be addressed is Callowhill Substation, which is located on the former Reading Railroad viaduct just below the north portal of the Center City Commuter Rail Tunnel. This substation is one of 12 autotransformer substations that converts the incoming voltage from 24,000 volts to 12,000 volts and distributes the traction power to all SEPTA rail lines that operate to the north of the City. This facility has deteriorated and requires replacement. A new facility will be constructed on SEPTA property adjacent to the Portal switching Station at Green Street. Both facilities will house state-of-the-art circuit breakers, swithgears and control equipment.

Callowhill Bus Garage Replacement

MPMS# 0

AQ Code X

This project provides for the design and construction of a new bus facility to replace the existing 87-year old bus garage, located at 59th Street and Callowhill in southwest Philadelphia. Buses at this facility serve 18 bus routes. Areas requiring construction include a service area for fueling, bus washing and cleaning, a maintenance area for repairs, lube and tire change area, areas for bus storage, employee parking, transportation building, office areas, areas for revenue equipment repairs and vault pulling. In addition, site work in preparation for the construction of the facility, site utilities placement, parking and roadway construction will also take place.
