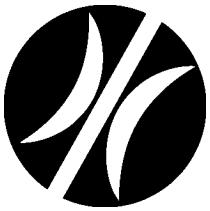
Created in 1965, the Delaware Valley Regional Planning Commission (DVRPC) is an interstate, intercounty and intercity agency that provides continuing, comprehensive and coordinated planning to shape a vision for the future growth of the Delaware Valley region. The region includes Bucks, Chester, Delaware, and Montgomery counties, as well as the City of Philadelphia, in Pennsylvania; and Burlington, Camden, Gloucester and Mercer counties in New Jersey. DVRPC provides technical assistance and services; conducts high priority studies that respond to the requests and demands of member state and local governments; fosters cooperation among various constituents to forge a consensus on diverse regional issues; determines and meets the needs of the private sector; and practices public outreach efforts to promote two-way communication and public awareness of regional issues and the Commission.



Our logo is adapted from the official DVRPC seal, and is designed as a stylized image of the Delaware Valley. The outer ring symbolizes the region as a whole, while the diagonal bar signifies the Delaware River. The two adjoining crescents represent the Commonwealth of Pennsylvania and the State of New Jersey.

DVRPC is funded by a variety of funding sources including federal grants from the U.S. Department of Transportation's Federal Highway Administration (FHWA) and Federal Transit Administration (FTA), the Pennsylvania and New Jersey departments of transportation, as well as by DVRPC's state and local member governments. Funding for this report and its research was provided by the William Penn Foundation. The authors, however, are solely responsible for its findings and conclusions, which may not represent the official views or policies of the funding agencies.

DVRPC fully complies with Title VI of the Civil Rights Act of 1964 and related statutes and regulations in all programs and activities. DVRPC's website may be translated into Spanish, Russian, and Traditional Chinese online by visiting www.dvrpc.org. Publications and other public documents can be made available in alternative languages or formats, if requested. For more information, please call (215) 238-2871.

Section I: Background and Introduction

Background

While the overall population and employment of the Philadelphia region has remained relatively stable over the past decades, the location of the region's people and jobs is shifting, with some areas realizing significant gains in residents and jobs and other areas experiencing losses. Socioeconomic characteristics of the population are likewise shifting, with many communities realizing significant changes in median income, household type and size, age, race, and ethnicity. Changing demographics will significantly impact the cultural needs, demands, and preferences in these communities. In order to achieve their goals and secure their financial futures, the multitude of organizations that produce and market cultural opportunities throughout the region must be able to adapt to their changing audiences.

In 2008, the Philadelphia Cultural Management Initiative (PCMI) and the Greater Philadelphia Cultural Alliance will conduct primary market research on cultural participation in the Philadelphia region, and the Pennsylvania Cultural Data Project has compiled information on baseline arts activity. DVRPC's contribution to this overall effort to understand the impact of changing demographics on participation in the arts is an analysis of regional demographic trends and the forecasting of anticipated socioeconomic shifts. The combined findings from these three areas of research will provide the region's arts and cultural organizations with insight as to how to adapt their products, communications, and outreach in order to broaden, deepen, and diversify their audiences.

Introduction

This report includes baseline data for 80 separate planning areas (referred to in the report as CPAs) in a 10-county region that includes DVRPC's nine member counties (Bucks, Chester, Delaware, Montgomery, and Philadelphia counties in Southeastern Pennsylvania and Burlington, Camden, Gloucester, and Mercer counties in Southern New Jersey) and New Castle County, Delaware. These planning areas were initially defined based on county planning area definitions used by DVRPC's Transportation Modeling Division to aggregate and display data. These areas were then reviewed by each of the county planning staff and revised as appropriate, to ensure consistency with county planning and data collection efforts. Map 1 illustrates the 80 planning areas used in this study and Table 1 lists these planning areas by county. Individual county maps with planning area boundaries and a list of each planning area's component municipalities are provided in Appendix A.

Baseline data was compiled for each planning area, including:

- Total population
- Age and sex
- Race, ethnicity, and ancestry
- Educational attainment
- Household types
- Household income
- Housing costs and affordability
- Occupation

In addition to this baseline information, historic trends were analyzed and future changes in population, population characteristics (including age, sex, race, ethnicity, household income, and household type), and employment were projected through 2020. A general discussion of the baseline information is presented in Section I, followed by a discussion of DVRPC's environmental justice methodology and its relationship to this report in Section II. Section III includes a discussion of historic trends, followed by a discussion of the socioeconomic forecasts in Section IV and a report summary in Section V.

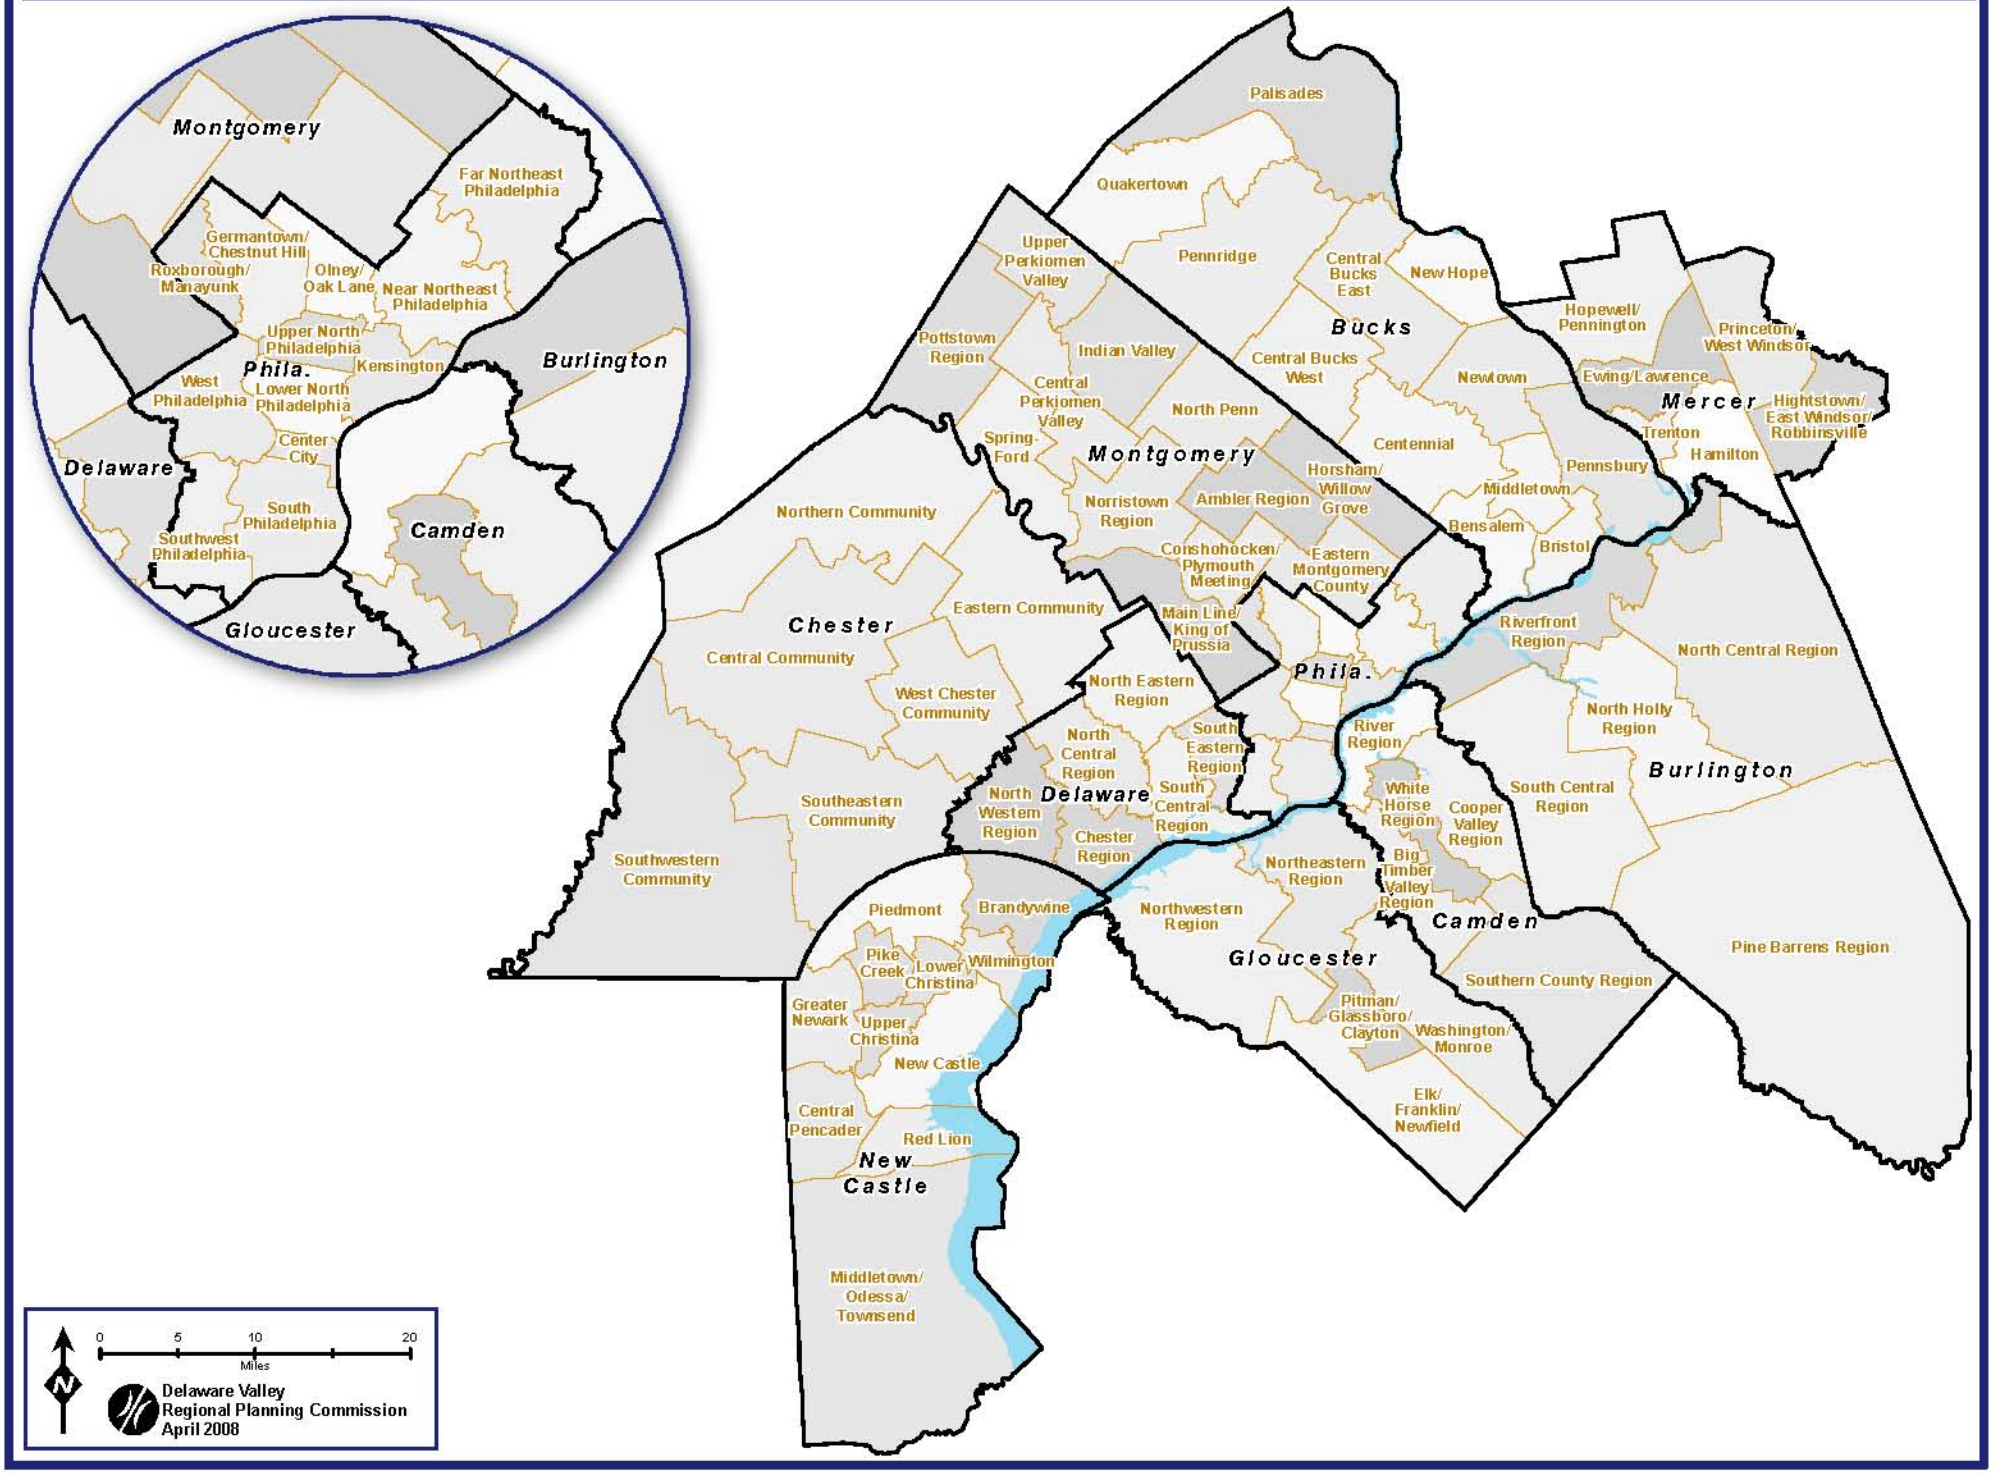
Map 1 County Planning Areas (CPAs)



Section II: Baseline Data

This section presents baseline data on the population of each of the planning areas, including distribution and density; age and sex; race, ethnicity, and ancestry; and educational attainment. It also provides household information by planning area (including household and family types, income, and housing costs and affordability) and identifies the occupation of the primary wage earner in each household. Comparing each planning area's demographic profile to the 10-county region as a whole and to their respective county is useful in characterizing the individual planning areas and in targeting specific populations.

Table 2: Planning areas with the highest population density, 2000

CPA No.	County	Planning area name	Residents per sq. mile
28	Philadelphia	Olney/Oak Lane	19,641
34	Philadelphia	Center City Philadelphia	18,515
30	Philadelphia	Upper North Philadelphia	15,621
33	Philadelphia	Lower North Philadelphia	14,763
32	Philadelphia	West Philadelphia	14,512
29	Philadelphia	Near Northeast Philadelphia	13,118
31	Philadelphia	Kensington	10,636
52	Mercer	Trenton	10,502

	10-county PCMI region		*1,368*

Source: United States Census Bureau, *2000 Census of Population and Housing*. April 2008.

Map 2 illustrates the population density of the 10-county region's population by planning area, and Table 2 identifies the region's 20 most densely populated areas. Not surprisingly, the City of Philadelphia's 12 planning areas are all within the top 20 most densely populated areas, as are the planning areas that include the cities of Trenton, Camden, Chester, and Wilmington, two additional planning areas in Delaware County, one in Camden County, and one in Montgomery County. Together, these 20 planning areas are home to over 40 percent of the residents of the 10-county region.

Age and sex

Appendix B provides data on population density as well as population by sex for each of the 80 planning areas. Regionwide, 52 percent of the population is female and 48 percent is male, mimicking national averages. Planning areas with higher concentrations of males include the North Central Region in Burlington County (the location of the Fort Dix military installation); the Central Perkiomen Valley Region of Montgomery County (due primarily to Graterford Prison, located in Skippack Township); and the Middletown/Odessa/Townsend area in New Castle County (because of the Delaware Correctional Center, located in Smyrna). The City of Philadelphia, particularly the Germantown/Chestnut Hill, Southwest, West, and Upper North areas, is home to higher than average concentrations of females.

Overall, 6 percent of the region's population is five years of age or younger; 22 percent is between five and 19 years; 59 percent is between 20 and 64 years; and 13 percent is considered elderly, age 65 and older. Given that 9 percent of the population is between the ages of 55 and 64 years (and therefore considered "near elderly"), one of the greatest challenges facing the region in coming years will be the continued aging of the population, particularly in the suburbs.

Map 3 illustrates the percentage of the population in each planning area that was 65 years of age or older as of 2000, and Table 3 identifies areas with the highest percentages of elderly and near-elderly residents. Areas with high percentages of elderly residents include many of the region's older suburbs (Eastern Montgomery County and North Central and North Eastern Delaware County, for example) and sections of Philadelphia. On the opposite end of the spectrum, planning areas with high percentages of residents under the age of 20 include the Upper North, Southwest, Kensington, and Olney/Oak Lane areas in Philadelphia; the River Region in Camden County; the Southwestern and Central Communities in Chester County; and the Elk/Franklin/Newfield area in Gloucester County. Appendix C provides data by age cohort for the 80 planning areas.

Table 3: Planning areas with the highest percentages of elderly and near elderly residents, 2000

Race and Ethnicity

Appendix D includes information on race and ethnicity (Hispanic or Latino versus non-Hispanic or non-Latino) for each planning area. Overall, the region's population is predominantly White and non-Hispanic, with 70 percent being White and non-Hispanic versus 30 percent of minority race and/or Hispanic ethnicity. Not surprisingly, higher than average percentages of minority and Hispanic residents are living in the region's cities (including Philadelphia, Trenton, Camden, and Chester) and older suburbs. Table 4 identifies planning areas with the highest concentrations of minority races and/or Hispanics, and Map 4 illustrates the percentage of minority residents in each planning area.

Table 4: Planning areas with the highest percentages of minority and/or Hispanic residents, 2000

PCMI CPA No.	County	Planning area name	Total population	Percent minority race and/or Hispanic	Percent minority race	Percent Hispanic
30	Philadelphia	Upper North Philadelphia	93,966	96%	88%	35%
28	Philadelphia	Olney-Oak Lane	171,515	91%	88%	11%
33	Philadelphia	Lower North Philadelphia	125,926	83%	80%	13%

55	Burlington	Riverfront Region	148,315	34%	32%	4%
	10-county PCMI region		*5,887,672*	*30%*	*31%*	*8%*

Source: United States Census Bureau, 2000 census of Population and Housing (SF3). Since race and ethnicity are not mutually exclusive, "minority race" includes both Hispanic and non-Hispanic residents, and "Hispanic" may include White Hispanics.

Ancestry

The Delaware Valley is diverse, with over 82 percent of the population declaring an ancestry other than "United States" in the 2000 Census. Appendix E identifies the first ancestry reported by those people who chose to declare an ancestry. Dominant ancestries reported include Irish or Scotch-Irish (15 percent), Italian (12 percent), German (10 percent), British (5 percent), and Polish (4 percent).

Identifying concentrations of people of specific ancestries can be useful in planning certain arts and cultural events. Almost 53,000 people of Irish descent, for example, live in Near Northeast Philadelphia, accounting for over six percent of the region's Irish population and constituting almost 22 percent of the local residents. While concentrations of Italian descendents are living (as expected) in South Philadelphia and Near Northeast Philadelphia, concentrations of people who identify themselves as Italian are

found in areas such as the South Central Region in Burlington County (with over 26,000, 18 percent of the local population) and the Big Timber Valley Region of Camden County (with almost 25,000, constituting over 25 percent of the local population).

Educational attainment

Map 5 illustrates the percentage of adults over the age of 25 with at least a four-year college degree and Appendix F provides information on the highest educational level completed by adults by planning area. Almost half of the region's adults aged 25 years and older never attended college, with 18 percent not completing High School and 31 percent earning no higher than a High School degree. Conversely, 28% of adults have earned at least a 4-year degree (including Bachelor's degrees as well as Master's, Doctorate, or Professional degrees).

Table 5 identifies planning areas with the highest concentrations of adults who never attended college and, conversely, the highest concentration of adults who have earned at least a four-year college degree. Educational attainment is markedly lower in the region's cities and oldest suburbs than in the growing suburbs. With over 72 percent of its adults having at least a four-year degree (including 42% with a post-graduate degree), the Princeton/West Windsor planning area in Mercer County boasts the highest degree of educational attainment, followed closely by Center City in Philadelphia.

Table 5: Differences in educational attainment, 2000

Income

Appendix H describes the average household income by planning area as well as the number of households with annual earnings within defined ranges as of 1999. While the region's average annual household income in 1999 was $63,450, the average for households that earned less than $200,000 (comprising 97 percent of the total) was $54,923, compared to an average of more than $343,000 for households earning $200,000 or more. Although this data is now over eight years old, important comparisons can be made between planning areas.

Map 6 illustrates the average annual earnings by planning area. Areas with the highest average incomes include the Princeton/West Windsor and Hopewell/Pennington areas in Mercer County; the Piedmont area of New Castle County; New Hope and Newtown in Bucks County; the Main Line/King of Prussia and Ambler regions in Montgomery County; the Southeastern and Eastern communities in Chester County; and the North Western Region in Delaware County. Areas with lower than average incomes, as expected, are concentrated in the region's cities, with the top-10 planning areas with the lowest average incomes including eight areas in the City of Philadelphia plus areas that include the cities of Camden and Trenton.

Households and families

The arts and cultural needs and preferences of households and their ability to access cultural opportunities and facilities can vary significantly based on their family structure. Retirees have different preferences than young adults, for example, and married couples with children have different demands than do couples with no children. Appendix G describes the number and type of households by planning area, for both households where the head of the household is between 15 and 64 years of age and those households headed by an elderly person. Households headed by a non-elderly householder are further broken down by family structure, including married couples with and without children, single parent families with children, and non-family households. Households headed by an elderly householder are disaggregated into married couples, those living with other family members but no spouse, those living alone, and those living with other non-related people. Table 6 identifies planning areas where

25 percent of more of the households are headed by an elderly householder. Regionwide, 23 percent of households are headed by an elderly person, and, of these, 45 percent live alone.

Of the region's households headed by a resident between the ages of 15 and 64 years, 23 percent are married couples with children under 18 years of age; 18 percent are married couples with no children; 9 percent are single parent households; 6 percent are other family situations (adult siblings living together, for example); and 22 percent are considered "non-family" households, consisting primarily of adults living alone. Planning areas where 25 percent or more of the non-elderly households are married couples with no children, which often have more disposable income than other family types, include the Middletown/Odessa/Townsend and Piedmont areas in New Castle County; the New Hope and Central Bucks East areas of Bucks County; and the North Western Region of Delaware County. Many of the region's faster-growing suburbs are home to particularly high concentrations of married couples with children, including the Central Bucks East and Newtown areas of Bucks County; the North Western Region in Delaware County; the Southeastern and Southwestern communities in Chester County; and the Northwestern Region of Gloucester County.

Single-parent households (mainly single females with children but also including single fathers) are concentrated in the region's cities, as illustrated on Map 7. Areas with the highest percentages include Upper North Philadelphia and the City of Camden, as well as other planning areas in Philadelphia, the City of Trenton, Wilmington, the City of Chester, and the New Castle and Red Lion areas in New Castle County.

Housing tenure and costs

Table 7 identifies planning areas with the highest percentages of renter and owner-occupied housing units, respectively. Regionwide, 68 percent of the occupied housing units are owner-occupied and 32 percent are renter-occupied. Over 24 percent of the region's homeowners pay 30 percent or more of their income towards their housing costs, including principle, interest, taxes, and utilities. Areas where larger percentages of homeowners pay 30 percent or more include the City of Trenton; the River Region, Big Timber Valley, Southern County and White Horse regions of Camden County; Bristol in Bucks County; the North central region of Burlington County; and several planning areas in Philadelphia, including Upper North Philadelphia, West Philadelphia, Southwest Philadelphia, Olney/Oak Lane, and South Philadelphia.

High percentages of homeowners paying a relatively high percentage of their income towards housing correlate with concentrations of poverty (especially in the cities). In some places, however, (especially in the region's older suburbs), older homeowners living on low to moderate fixed incomes also pay a high percentage of their income toward housing as they struggle to keep up with rising property taxes. The largest percentages of homeowners paying 30 percent or less of their income towards housing live in the State of Delaware, in the Piedmont, Pike Creek, Brandywine, Greater Newark, Upper Christina, and Lower Christina areas. Owners in these areas pay less than 20 percent of their income towards housing, due primarily to state's lower property taxes.

Generally, rental units are considered unaffordable if the renter is paying 35 percent or more of his or her income towards the monthly rent plus utilities. Overall, tenants in 31 percent of the region's rental units pay 35 percent or more of their income towards housing. The least affordable areas for renters include Upper North Philadelphia, Kensington, Southwest Philadelphia, West Philadelphia, and Lower North Philadelphia; the North Western Region of Delaware County; the Piedmont area in New Castle County; and Camden County's River region (which includes the City of Camden).

Source: United States Census Bureau, 2000 Census of Population and Housing. April 2008. Data describes the percentage of the planning area's total occupied units.

Appendix I describes the percentage of household income spent by homeowners on selected housing costs (including mortgage principle and interest, property taxes, and insurance) and Appendix J provides data on the percentage of income spent by renters on specified rental costs, including the contract rent and utilities.

Occupation

Another characteristic that may be of interest in gauging the cultural preferences of an area's residents is their occupation, which usually reflects educational attainment level and certainly impacts annual household income. As opposed to traditional employment data (which identifies the place of work), this information relates to the occupations of the people living in each area (regardless of where they go to work). Over 38 percent of the regions 2.7 million resident workers work in management, business, financial operations, or professional occupations; 14 percent work in service occupations; 29 percent work in sales and office occupations; and 19 percent work in construction, maintenance, production, manufacturing, and transportation occupations. Appendix K provides data on the occupation of the resident civilian labor force in each of the planning areas, including all employed residents age 15 and older.

Section II: Environmental Justice

As part of Title VI of the Civil Rights Act of 1964 and the 1994 President's Executive Order on Environmental Justice (EJ), DVRPC adopted guidelines to help mitigate potential direct and disparate impacts of transportation projects and programs on defined historically disadvantaged groups. DVRPC employs an environmental justice methodology that quantifies degrees of disadvantage within the nine-county Pennsylvania/New Jersey region. Using 2000 census data at the census tract level, categories of eight potentially disadvantaged groups are analyzed:

- non-Hispanic minorities
- households in poverty
- female heads of household with children
- Hispanics
- carless households
- elderly (over 85 years of age)
- physically disabled
- residents with limited English proficiency.

The regional population in each category is divided by the region's population as a whole, generating a regional baseline average, as illustrated in Table 8. If a census tract contains a concentration higher than the baseline threshold, it is considered disadvantaged. Census tracts are therefore categorized as having zero to eight degrees of disadvantage. Because of their socioeconomic status, disadvantaged residents in these communities may have limited mobility and financial limitations that in turn impact their ability to access facilities and services.

DVRPC's traditional environmental justice analysis covers only the nine-county Delaware Valley region. For the purposes of this project, a "*degrees of disadvantage*" analysis was also performed for New Castle County, Delaware. This analysis for the New Castle County census tracts maintains the standard DVRPC environmental justice thresholds to ensure compatibility with existing agency studies rather than re-adjusting the thresholds to an expanded 10-county, tri-state area.

Maps 8 through 15 illustrate the eight environmental justice characteristics in the 10-county PCMI region by census tract, overlaid with the PCMI planning area boundaries. The EJ analysis was performed at the census tract level as opposed to the larger planning area level to help identify population concentrations within each planning area. By doing so, the analysis is able to pinpoint specific locations within some county planning areas where sensitive populations reside that might go undetected if the analysis was performed at the larger planning area level.

In general, census tracts with higher degrees of disadvantage (meaning tracts with higher than average percentages in several of the environmental justice criteria) tend to cluster in large urban city centers (such as Philadelphia, Trenton, Camden, and

Table 8: Environmental justice characteristics and thresholds

Population Category	Threshold

Physically disabled	7%
Hispanic	5%
People over 85 years of age	2%
Limited English proficiency	2%

Source: Delaware Valley Regional Planning Commission, April 2008.

Wilmington), smaller cities (Coatesville, Norristown, and Pottstown, for example), and older suburbs (particularly in Delaware and Camden counties) while rural areas and growing suburbs usually have lower degrees of disadvantage. While this is generally true for all disadvantaged groups, it is particularly so for minority and Hispanic populations, female heads of households, carless households, and households living in poverty. Concentrations of elderly residents and the disabled are more likely to be scattered throughout the region's suburbs and cities.

As a part of the Commission's ongoing environmental justice analysis, DVRPC has analyzed in greater depth the distribution of households with limited English proficiency, illustrated on Map 10. Concentrations of Spanish-speaking households with limited English proficiency are found in southern Chester County, North Philadelphia, Camden, and Trenton. Households that primarily speak Asian languages tend to be concentrated in Center City Philadelphia, South and Southwest Philadelphia, Northeast Philadelphia, Haverford and Marple townships in Delaware County; the City of Camden, eastern Mercer County, and eastern and central Montgomery County.

The environmental justice analysis identifies specific places in the 10-county region where several sensitive populations overlap and which may therefore require additional planning considerations. Every planning area contains at least one census tract that has a degree of disadvantage, and most have multiple sensitive tracts. Recognizing specific locations within the larger planning area that are home to these disadvantaged populations allows for targeted outreach. These places contain a mix of individuals with varying needs that will likely impact their arts consumption and their ability to access arts and cultural opportunities.

Section III: Historic trends

This section illustrates historical trends (1980-2000) by planning area for a number of socioeconomic characteristics, including population change; changes in race and ethnicity; trends in the number of households, average household size, and household type; and changes in annual household income. Data is also provided on trends in mortgage lending activity and residential construction permits as another way to gauge changing demographic and socioeconomic conditions and resulting shifts in cultural demands and preferences.

Population

The total population of the 10-county region increased by 9 percent between 1980 and 2000. This growth was not evenly dispersed throughout the region, with some areas losing population and others growing significantly. The region's fastest-growing counties include Chester County, Pennsylvania (which realized an increase of 37 percent in the number of residents), Gloucester County, New Jersey (at 28 percent), and New Castle County, Delaware (26 percent).

While these three counties were the fastest-growing of the 10 counties in the PCMI region, every county has certain specific locations where the population grew at a faster-than-average rate or declined significantly between 1980 and 2000. Table 9 identifies the

Table 9: Population change in selected planning areas, 1980-2000

Source: United States Census Bureau, 2000 Census of Population and Housing. April 2008.

20 fastest-growing planning areas in the 10-county region and the 20 areas that lost the greatest percentage of their population. Population losses were primarily concentrated n the region's cities and oldest suburbs, due to both out-migration and declining household sizes related to the aging of the population in these areas. Appendix L provides historic population data by planning area for the 10-county PCMI region.

Age and Sex

Historic data on population by age and sex is provided in Appendix M. Overall, the population of the 10-county region has gotten progressively older since 1980, with 13 percent of the population over the age of 65 in 2000 as compared to 11 percent in 1980, and only 28 percent under the age of 20 in 2000 as compared to 31 percent in 1980. The region's cities and older suburbs (in Delaware and Camden counties, for example) realized significant increases in the percentage of elderly residents, while growing suburbs (Chester, New Castle, and Gloucester counties, for example) saw increases in the number of children in their communities. Table 10 identifies planning areas that realized the most significant changes in the percent of their populations that were over the age of 65 between 1980 and 2000 and simultaneous decreases in the proportion of younger residents.

Race and ethnicity

Between 1980 and 2000, the population of the 10-county region grew by just over 8 percent, from 5.4 million people to just under 5.9 million. This growth is attributable entirely to increases in the minority populations, as the number of Whites declined by approximately 1 percent between 1980 and 2000 (a decrease of just over 50,000), while the number of people of minority races increased by 45 percent, from 1.14 million to over 1.65 million. Growth in minority populations has resulted in the region's percentage of Whites declining from 28 percent in 1980 to 21 percent in 2000, with a corresponding increase in the percentage of minorities.

Source: United States Census Bureau. April 2008

Table 11 identifies planning areas that realized the greatest shifts in the racial composition of their population between 1980 and 2000. The majority of the growth in minority races in these areas is attributable to increases in the Asian/Pacific Islander population. Appendix N provides data on the racial composition of the 80 planning areas in 1980, 1990, and 2000.

Appendix O provides information on trends in ethnicity between 1980 and 2000. Regionwide, the percent of the population that is Hispanic or Latino has increased by 133 percent since 1980, from 135,000 in 1980 to more than 314,000 by 2000. Planning areas that have realized large percentage increases in their Hispanic populations include Central Pencader, New Castle, Lower Christina, and Greater Newark (all in New Castle County), Near Northeast Philadelphia, Hopewell/Pennington and Hightstown/East Windsor/Robbinsville in Mercer County; and Norristown in Montgomery County.

Source: United States Census Bureau, STF3 (1980 and 1990), SF3 (2000). Ranked by the change in the percent of the population that was of minority race between 1980 and 2000. April 2008.

Households

Regionwide, the average household size has declined steadily over the past few decades, from 2.88 persons per household in 1980 to 2.67 by 2000. This decline is associated with smaller family sizes, the aging of the population (and consequent increases in the number of elderly adults living alone), and increases in the number of non-traditional families (single parents with children, for example, and unrelated adults living together). Appendix P provides information on changes in the number of households and changing average household sizes. Planning areas that have realized the largest declines in household sizes have generally also seen an increasing number of elderly households, and include the Centennial area (Bucks County), Ambler (Montgomery County), the North Central Region (Delaware County), Pike Creek (New Castle County), and Far Northeast Philadelphia.

Income

Appendix Q provides income data for 1979, 1989, and 1999 (the years for which income was reported in the 1980, 1990, and 2000 Censuses). Rather than comparing averages, this report considers historic trends and predicts future changes in the number of households earning less than 50 percent of the median regional household income; between 50 and 99.9 percent of the median; between 100 and 149.9 percent of the median; and 150 percent or more of the median. This method allows comparisons to be drawn between planning areas regarding the relative number of households with annual incomes that fall within each of these income ranges.

Regionwide, the number of households earning 150 percent of the median or more increased by 25% between 1980 and 2000, compared to an increase of 17% in households overall. The data points to a widening gap between wage earners, with greater increases in the number of households in the "50 to 100 percent of income" and "150 percent and higher" ranges and slower growth or even declines in the middle income "100 to 149.9 percent" range. Table 12 identifies the planning areas that realized the greatest increases in the percentage of households earning 150 percent or more of the region's median household income between 1980 and 2000. Areas where the change in the number of households in the highest income range exceeds the growth of households overall include Central Pencader, Red Lion, and Middletown/Odessa/Townsend (all in New Castle, Delaware); the Spring-Ford and the Central Perkiomen Valley in Montgomery County; the Central Bucks East, New Hope and Newtown areas of

Bucks County; and fast-growing suburban areas in Chester County, Pennsylvania and Gloucester County, New Jersey.

Residential building permits

The number of residential building permits issued between 1990 and 2006 in permit-issuing places is provided in Appendix R. Since 2000, 17% of the almost 133,000 residential construction permits issued in the 10-county region were issued in Chester County, Pennsylvania, followed by Montgomery and Bucks counties, Pennsylvania; Burlington and Gloucester counties (New Jersey); and New Castle County, Delaware. Table 13 lists the planning areas where the most residential construction permits were issued between 2000 and 2006. Regionwide, 81 percent of these permits were issued for single family housing units, although planning areas where over 40% of the building permits issued between 2000 and 2006 were for units in structures with three or more units include Newark, Delaware; the City of Philadelphia; the Cooper Valley Region of Camden County; and the North Central Region in Delaware County.

Mortgage lending activity

Appendix S provides data on mortgage lending activity in 2000 and 2005, available through the Home Mortgage Disclosure Act (HMDA) data files. HMDA lending information includes both conventional and federally guaranteed (FHA, FMHA, and VA) mortgage loans for newly-constructed homes and the resale of existing units. For the purposes of this report, only data on mortgages for home purchases were reviewed. As a gauge of housing market activity and a surrogate for changing housing prices, Appendix S compares the annual number of mortgages issued and the average annual loan amount for each year. Region-wide, the average mortgage loan amount in 2005 was 49 percent higher than in 2000, and the number of mortgage loans reported increased by over 70%.

Table 13: Planning areas that issued the most residential building permits, 2000-2006

Table 14 lists planning areas that realized the highest percent increase in the average mortgage loan amount between 2000 and 2005. Housing prices have increased significantly in recent years in the region's cities and older suburbs, with eight of Philadelphia's twelve planning areas ranking in the top 20 in terms of the increase in the average loan amount between 2000 and 2005. Table 15 identifies the 20 planning areas that realized the largest percentage increases in the number of mortgages issued in 2005 as compared to 2000. These areas include fast growing suburban areas experiencing significant new construction (such as the Middletown/Odessa/Townsend planning area in New Castle County and the Northwestern Region of Gloucester County) and existing developed communities, such Philadelphia, Willow Grove, and Wilmington.

Table 14: Change in the average home mortgage loan amount, 2000-2005

County	Planning area name	Average loan value, 2005	Change in average loan value, 2000-2005
Delaware	South Central Region	$272,125	152%
Philadelphia	Lower North Philadelphia	$189,607	121%
Philadelphia	South Philadelphia	$149,400	117%
Philadelphia	Kensington	$76,650	100%
Montgomery	Horsham/Willow Grove	$301,408	98%
Montgomery	Pottstown Region	$193,489	91%
Philadelphia	West Philadelphia	$106,979	90%
Bucks	New Hope	$411,835	90%
Philadelphia	Upper North Philadelphia	$47,051	86%
Gloucester	Elk/Franklin/Newfield	$190,922	78%
Montgomery	Norristown Region	$213,194	78%
Philadelphia	Far Northeast Philadelphia	$147,186	73%
Mercer	Hightstown/East Windsor/Robbinsville	$221,770	73%

American Community Survey Data

The American Community Survey (ACS) is an annual household survey conducted by the Census Bureau that will eventually replace the long-form of the decennial Census. ACS estimates are based on responses from a much smaller annual sample than the 10-year Census, collected and compiled over a three-to-five year time period (depending on the geography). While the ACS will eventually provide annual information on numerous socioeconomic characteristics for small geographies (including municipalities and census tracts), the data is currently only available for counties and census-designated places with 65,000 or more residents. It was therefore not possible to aggregate and assess ACS data at the county planning area level. Comparisons of county-level data, however, can provide a glimpse of what may be occurring at smaller geographies. Because of differences between the decennial Census and the ACS in terms of methodology, sample size, and wording of the questions, comparisons were drawn between the 2002 and 2006 ACS data, rather than between the 2000 Census and any ACS results.

Appendix T provides available ACS data from 2002 through 2006 by county. Based on ACS estimates, the fastest growing counties in the 10-county PCMI region between 2002 and 2006 were Chester County (where the population increased by 11 percent) and Gloucester County, New Jersey (with a ten percent increase). All of the region's counties gained residents between 2002 and 2006, including the City of Philadelphia. ACS data confirms that the region's population is aging, with Bucks County realizing the greatest increase in median age. This increasing median age is likely related both to residents aging in place and the construction of new age-restricted housing developments. The only counties where the median age declined are Mercer County (where the median age declined from 37.9 to 36.9) and Chester County (where the median age decreased slightly, from 38.5 years to 38.2 years).

Minority populations in the region continue to increase. Philadelphia is a "majority minority" city, with 61 percent of its population being of minority race and/or Hispanic, and the percentage minority increased in every county in the region between 2002 and 2006, with 2006 percentages ranging from 36 percent and 35 percent in Camden County and New Castle County, respectively, to 11 percent in Bucks County.

With an estimated increase of over 20 percent, Gloucester County realized the greatest percentage increase in median household income between 2002 and 2006, followed by Camden County (16 percent) and Montgomery County (15 percent). Median housing values continue to increase significantly throughout the region (a conclusion supported by the previous discussion of the average value of mortgage loans), with the largest increases between 2002 and 2006 realized in Bucks and Philadelphia counties in Pennsylvania and Camden and Gloucester counties in New Jersey.

Consequently, housing costs as a percent of income continue to rise throughout the region, particularly in Camden and Gloucester counties (where growth in household income has apparently not kept pace with rising housing costs). The same is true of rental housing costs as a percent of income, as rising median rents in all counties have led to decreasing rental affordability in all counties except Montgomery (where the median percent of income spent on rent and utilities was unchanged between 2002 and 2006) and Mercer County (where the median increased by only 4 percent).

Section IV: Socio-economic forecasts

Social and economic characteristics of the region's population are shifting, with many communities realizing significant changes in median income, household type and size, age, race, and ethnicity. Changing demographics will significantly impact the cultural needs, demands, and desires in these communities. The multitude of organizations that produce and market cultural opportunities throughout the region must be able to adapt to their changing audiences. As a part of this project, forecasts of the region's changing age, racial and ethnic make-up, incomes, and household types were developed in five-year increments through 2020 by county planning area. These forecasts, while not exact, will assist the region's arts and cultural organizations in planning how to best respond to the preferences of their changing audiences. The methodology for developing these forecasts is described below, followed by a brief discussion of the results.

Methodology for developing forecasts by age and sex

Draft 2020 county planning area population forecasts by sex and age (in 5-year increments) were developed by running a traditional age-cohort survival model developed by DVRPC, based on 2005 population estimates and 2010, 2015, and 2020 population forecasts adopted by DVRPC and the Wilmington Area Planning Council (WILMAPCO). The model applies birth, death, and migration rates to individual age cohorts and tracks these cohorts over time. Sources of the data incorporated in the model include the following:

- Fertility rates: Fertility rates (commonly referred to as birth rates) are available only at the state level. For the purposes of this study, the birth rate from the State of New Jersey was used for all counties (rather than the Commonwealth of Pennsylvania or the State of Delaware). This model assumes that the birth rates in Southeastern Pennsylvania and Northern Delaware are more similar to the rate in New Jersey than to their respective statewide fertility rates. The source of the data is *New Jersey Health Statistics 2003*.

- Survival rates: Survival rates by age and sex cohort are available at the national level. The source of data used in the model is the *United States Life Table 1990-2001*. The model also assumes that there will be some improvements in survival rates in the future (due to medical advances and healthier lifestyles), based on national research.

Differences in the population that cannot be explained by simply applying known birth and death rates result from migration. Population migration, the third component of population change, is factored into the forecasts by first incorporating the known migration rate for each specific age and sex cohort between 1990 and 2000 and then adjusting these rates based on the 2005 population estimate and 2010, 2015, and 2020 forecasts for each planning area.

In planning areas that are forecast to lose population, for example, a slight negative migration factor was applied (which means that out-migration is expected to accelerate, with an increasing percentage of people forecast to move out of the area); in stable or slow growth planning areas, such as those in eastern Delaware County, a very modest adjustment to migration was made; and in planning areas that are forecast to gain more residents than can be explained through births, deaths, and the continuation of the previous migration rate (parts of Chester and Gloucester counties, for example), the migration rates were adjusted upward, assuming that in-migration will accelerate. Migration was adjusted for each planning area so that the resulting sum of the forecasts of residents by age and sex for each five-year interval matched the adopted 2010, 2015, and 2020 forecasts.

Forecasts of population by age and sex were reviewed in light of historical trends and adjusted as appropriate. Draft forecasts were then sent to each county planning staff for review, and additionally adjustments were made based on their comments.

Methodology for developing race, ethnicity, income, and household type forecasts

Trends in population by race and ethnicity and households by type (married couples with or without children, single parent households with children, adult-headed households with no children, and single-person households) and income are much harder to predict than are age and sex forecasts, given that they are dependent on a complex set of economic and market conditions that are themselves difficult to quantify. For the purposes of this project, projections were developed using a simple straight-line projection method. Changes in the percentages of people or households in any given category between 1980, 1990, and 2000 were projected forward through 2010, 2015, and 2020, and the results were then applied to the 2010, 2015, and 2020 population and household forecasts adopted by DVRPC or WILMAPCO.

In the case of income, income ranges provided by the Census Bureau are based on current dollars for each decade (rather than constant 2005 dollars, for example), making direct comparisons difficult. The number of households with annual incomes falling within specified income ranges provided by the Census for 1980, 1990, and 2000 were therefore aggregated based on the median household income in the Philadelphia metropolitan statistical area for each year, creating new ranges that approximate the number of households earning less than 50 percent of the median; between 50 and 100 percent of the median; between 100 and 150 percent of the median; and those earning over 150 percent of the median. Trends in the number of households in each of these new ranges were then tracked and projected forward through 2020.

Draft forecasts were reviewed and compared to other available information (such as mortgage lending activity, residential construction activity, DVRPC's employment forecasts, and existing plans) and adjusted as appropriate. These forecasts were then sent to each of the county planning staffs for review, and subsequent adjustments were made based on their comments.

The intent of this exercise was to develop a set of predictions based on previous trends that can be used for sketch planning purposes. Changing socioeconomic characteristics are dynamic, dependent on a complex set of conditions that are difficult to predict and may not be accurately captured by this simple straight-line forecasting method.

Given the forecasted aging of the population, for example, the percentage of households that are either married couples without children or non-family households is likely to accelerate in the future. But will these seniors choose to stay in their existing suburban neighborhoods, or move to a community more suited to their changing needs as they age? While some adjustments were made to attempt to reflect these anticipated changes, the forecasting methodology used in this report to predict future changes in race, ethnicity, income and household type represents an educated guess as to what the future holds for each planning area, resulting in a set of forecasts that, while not exact, should be useful in predicting future trends and assisting in future planning efforts.

Population forecasts

A summary of the forecasted population change in each planning area is provided in Appendix U (in five-year increments between 2000 and 2020). Map 16 and Map 17 illustrate the forecasted absolute and percent changes in population between 2000 and 2020, and Table 15 identifies the planning areas forecast to gain the most population between 2000 and 2020.

Map 16 Forecasted Absolute Population Change by CPA, 2000-2020

Sources: DVRPC, U.S. Census Bureau

In both absolute numbers and percentage increase, the Middletown/Odessa/Townsend area in New Castle County, Delaware is forecast to be the fastest growing area in the 10-county region. Other areas forecast to realize significant population increases include growing suburban areas in Chester, Gloucester, and Burlington counties, while the region's cities and oldest suburbs in Delaware, Camden, and New Castle County are forecast to lose population.

Age and sex

Appendix V provides detailed forecasts by age and sex by planning area in five-year increments between 2000 and 2020. By 2020, almost one in five of the region's residents will be over the age of 65, which will significantly impact the region's service providers and decision-makers and obviously impact the arts and cultural preferences of the residents as well as their ability to access facilities and events. Map 18 illustrates the forecasted percent of the population that will be 65 years and older, by planning area. Planning areas expected to have the highest percentages of elderly residents include the North Central Region of Delaware County (where one in four residents will be over the age of 65), the Piedmont area of New Castle County, Palisades (in Bucks County), Ambler (Montgomery County), Far Northeast Philadelphia, and the Cooper Valley Region in Camden County.

Race and ethnicity

Forecasted changes in racial and ethnic characteristics between 2000 and 2020 are provided in Appendices W and X, respectively. The percent of the population that is of minority race and/or Hispanic is expected to continue to increase through 2020. While the region's overall population is forecast to increase by 9 percent, the number of people of minority race is forecast to increase by 30% during the two decades. Similarly, the region's Hispanic population is forecast to increase by 64 percent between 2000 and 2020. Based on current trends, planning areas where the Hispanic population is forecast to increase most significantly include the Middletown/ Odessa/Townsend, Central Pencader, and Red Lion areas in New Castle County, the Northwestern Region in Gloucester County, and the Southwestern Region in Chester County. Areas forecast to realize the most significant increases in races other than White include the Big Timber Valley and River Regions in Camden County; the Upper Perkiomen Valley and Spring-Ford in Montgomery County, Quakertown in Bucks County; and the Middletown/Odessa/Townsend and Central Pencader areas in New Castle County. Most of the increase in the region's minority population is expected to be related to the continued increase in the region's Asian population.

Household income

Forecasted changes in household income by planning area are provided in Appendix Y. For the purposes of this report, the relative number of households in specific income ranges was forecast, using the region's median income as a basis for comparing individual planning areas. Predicting the number of households in each income range is useful in identifying areas where a significant number of households will have money available for arts and cultural spending. The forecasts can be used, for example, to compare forecasted changes in the number of households overall to the change in the number of households earning 150 percent or more of the region's median income.

These comparisons can help gauge the relative spending power of one planning area as compared to others. Planning areas forecast to realize significantly higher increases in the number of households earning over 150% of median than in the total number of households overall include the Red Lion, Middletown, and Central Pencader planning areas in New Castle County, the Northwestern Region and Elk/Franklin/Newfield area in Gloucester County, Spring-Ford in Montgomery County, and New Hope in Bucks County.

Household type

The final socioeconomic characteristic for which DVRPC produced forecasts to 2020 was household type, including married couples with or without children, single parent households with children, unrelated adults living together with no children, and single-person households. Various household types have very different arts and cultural preferences (families with children versus dual-income couples with no children versus single adults, for example).

Based on current trends, the percentage of traditional married couple families is forecast to continue to decline region-wide, while the percentage of all other household types are expected to increase. Overall, the 10-county region is expected to realize an 20 percent decline in the number of traditional families, a 3 percent increase in the number of married couples without children, a 22 percent increase in the number of single-parent families, a 25 percent increase in the number of households with unmarried adult family members living together, and a 32 percent increase in the number of "non-family" households, primarily adults living alone. The increases in single adults living alone, married couples without children, and related adults living together is being fueled by the aging of the population, discussed previously in this report.

Planning areas forecast to realize significant increases in the number of single adults living alone include the Middletown/Odessa/Townsend and Red Lion areas in New Castle County, the Northwestern Region in Gloucester County, and the Centennial area in Bucks County. Significant increases in single-parent households are expected in many of the same fast growing areas (such as the Middletown/Odessa/Townsend area in New Castle County). Expected changes in household types are provided by planning area in Appendix Z.

Section IV. Summary

Changing demographics in the Philadelphia region will significantly impact the cultural needs, demands, and preferences of the region's residents. In order to achieve their goals, non-profit organizations that produce and market cultural opportunities throughout the region must be able to adapt to their changing audiences.

Through the efforts of the Philadelphia Cultural Management Initiative (PCMI), the Greater Philadelphia Cultural Alliance, and the Pennsylvania Cultural Data Project, surveys of cultural participation in the Philadelphia area have been undertaken and data on baseline arts activity has been compiled. DVRPC's contribution to this overall effort to understand the impact of changing demographics on participation in the arts is the analysis of regional demographic trends and the forecasting of future socioeconomic shifts. The combined findings from these three areas of research will provide the region's arts and cultural organizations with insight as to how to adapt their products, communications, and outreach in order to broaden, deepen, and diversify their audiences.

This report provides baseline and historic demographic and socioeconomic data and forecasted changes in population by age, sex, race, ethnicity, income, and household type by planning area through 2020. As discussed previously, the intent of this forecasting exercise was to develop a set of predictions based on previous trends that can be used for sketch planning purposes. Age and sex forecasts were developed using a traditional age-cohort survival method, bounded by the overall population forecasts adopted by DVRPC and WILMAPCO.

Other socioeconomic forecasts were developed using a straight-line projection method adjusted as appropriate based on professional judgment, including input from the county planning staffs. Changing socioeconomic characteristics are dynamic, dependent on a complex set of economic and social conditions that are difficult to predict and may not be accurately captured by this simple straight-line forecasting method. While some adjustments were made to reflect anticipated changes, the methodology used in this report to predict future changes in race, ethnicity, income and household type represents an educated guess, based on past trends, as to what the future holds for each planning area. The resulting forecasts, while not exact, should be useful in guiding future planning efforts.

Source: United States Census Bureau, *2000 Census of Population and Housing* (SF3). Data describes the first ancestry listed by people who declared at least one ancestry on their 2000 Census form. Approximately 85% of the 5.9 million people living in the 10-county region chose an ancestry other than "United States". April 2008.

Source: United States Census Bureau, STF3 (1980 and 1990), SF3 (2000). April 2008. Income reported in each Census year is for the preceding year (1979, 1989, and 1999). The number of households with annual incomes falling within specified income ranges in 1979, 1989, and 1999 were aggregated based on the median household income in the Philadelphia metropolitan statistical area for each year, creating ranges that approximate the number of households earning less than 50% of the median; between 50% and 100% of the median; between 100% and 150% of the median; and those earning over 150% of the median. April 2008.

Source: Delaware Valley Regional Planning Commission, April 2008. "Other families" include related, unmarried adults with no children. "Non-family households" are primarily single adults living alone but also includes unrelated adults living together. "Children" refers to their own children under the age of 18 years.

Report title: Demographic Trends and Forecasts in the Philadelphia Region

Publication Number: 08031

Date Published: April 2008

Geographic Area Covered: a ten-county region that includes Bucks, Chester, Delaware, Montgomery, and Philadelphia counties in Pennsylvania; Burlington, Camden, Gloucester, and Mercer counties in New Jersey; and New Castle County, Delaware.

Key Words: arts and culture, demographic data, demographic trends, population forecasts

Abstract: While the overall population and employment of the Philadelphia region has remained relatively stable in recent decades, the location of the region's people and jobs is shifting, with some areas realizing significant gains in residents and jobs and other areas experiencing losses. Socioeconomic characteristics of the population are likewise shifting, with many communities realizing significant changes in median income, household type and size, age, race, and ethnicity. Changing demographics will significantly impact the cultural needs, demands, and preferences in these communities. In order to achieve their goals, the multitude of organizations that produce and market cultural opportunities throughout the region must be able to adapt to their changing audiences. In 2008, the Philadelphia Cultural Management Initiative (PCMI) and the Greater Philadelphia Cultural Alliance plan to conduct primary market research on cultural participation in the Philadelphia region, and information on baseline arts activity has been compiled by the Philadelphia Cultural Data Project. DVRPC's contribution to this overall effort to understand the impact of changing demographics on participation in the arts is an analysis of regional demographic trends and the forecasting of anticipated socioeconomic shifts.

This report includes baseline demographic data for 80 separate planning areas in a 10-county region which includes DVRPC's nine member counties and New Castle County, Delaware. In addition to this baseline information, historic trends were analyzed and future changes in population and socioeconomic characteristics (including age, sex, race, ethnicity, household income, and household type) were projected through 2020. Combined with the findings from PCMI's research on arts and cultural participation, these forecasts, though not exact, will help provide the region's arts and cultural organizations with insight as to how to adapt their products, communications, and outreach in order to broaden, deepen, and diversify their audiences.
