"THIS REPORT IS PRINTED ON RECYCLED PAPER"

The preparation of this report was funded through federal grants from the U.S. Department of Transportation's Federal Highway Administration (FHWA) and Urban Mass Transportation Administration (UMTA), as well as by DVRPC's member governments. The authors, however, are solely responsible for its findings and conclusions, which may not represent the official views or policies of the funding agencies.

Created in 1965, the Delaware Valley Regional Planning Commission (DVRPC) is an interstate, intercounty and intercity agency which provides continuing, comprehensive and coordinated planning for the orderly growth and development of the Delaware Valley region. The region includes Bucks, Chester, Delaware, and Montgomery counties as well as the City of Philadelphia in Pennsylvania and Burlington, Camden, Gloucester, and Mercer counties in New Jersey. The Commission is an advisory agency which divides its planning and service functions between the Office of the Executive Director, the Office of Public Affairs, and three line Divisions: Transportation Planning, Regional Information Services Center, which includes Regional Planning Office, and Finance and Administration. DVRPC's mission for the 1990s is to emphasize technical assistance and services and to conduct high priority studies for member state and local governments, while determining and meeting the needs of the private sector.

The DVRPC logo is adapted from the official seal of the Commission and is designed as a stylized image of the Delaware Valley. The outer ring symbolizes the region as a whole while the diagonal bar signifies the Delaware River flowing through it. The two adjoining crescents represent the Commonwealth of Pennsylvania and the State of New Jersey. The logo combines these elements to depict the areas served by DVRPC.

Publication Abstract

TITLE YEAR 2020 REGIONAL AND COUNTY POPULATION AND EMPLOYMENT FORECASTS	Date Published: JUNE 1, 1992 Publication No. 92014
---	--

Geographic Area Covered:

Pennsylvania Counties: Bucks, Chester, Delaware, Montgomery, Philadelphia
New Jersey Counties: Burlington, Camden, Gloucester, Mercer

Key Words:

Population, employment, forecast, regional, county, births, deaths, cohorts, sectors, S.I.C.

ABSTRACT

Contains the DVRPC Board's adopted regional and county 2000, 2010 and 2020 population and employment forecasts for the nine-county region. Population forecasts include 5-year age cohorts in 5-year increments. Employment forecasts include major Standard Industrial Classification (SIC) sectors by county in 10-year increments.

INTRODUCTION

On May 28, 1992, the Delaware Valley Regional Planning Commission (DVRPC) adopted Regional and County Population and Employment Forecasts for Years 2000, 2010 and 2020. These forecasts replace any county or regional forecasts previously adopted by the DVRPC Board, including those of September, 1987.

Forecasts are an essential element in DVRPC's planning programs. As the federally-designated Metropolitan Planning Organization for the nine-county Philadelphia and Trenton Standard Metropolitan Statistical Areas, DVRPC is required to undertake and maintain a long-range comprehensive, coordinated and continuous (3C) transportation planning process with supporting land use, environmental and demographic planning activities. DVRPC periodically provides updated forecasts of population and employment as new data becomes available, such as the 1990 Census information.

These updated forecasts will serve five important functions. First, the forecasts will be used for the preparation of a Year 2020 Regional Transportation Plan, as an indicator of trends in each county. Second, the forecasts will serve as input to the detailed transportation modeling needed for area-specific corridor analyses. Third, the forecasts will be used for the preparation of a Year 2020 Regional Development Plan, to include policies and directions for land use and growth management. The forecasts will also serve as input for the modeling of future air quality and the planning required to meet the goals of the Clean Air Act. Finally, these regional and county forecasts will be used as the basis for updating the municipal population and employment forecasts, last completed in 1988. Updated municipal forecasts will be available in early 1993.

2020 FORECAST PROCESS

The forecasts were prepared by DVRPC staff in conjunction with city and county planning offices, state and federal agency representatives and a panel of regional economists from the private sector. While there are a variety of models and methods available for future forecasts, ranging from the simple to the highly complex, all require the user to make certain assumptions about future conditions. The objective is to make reasonable assumptions about the future based on knowledge of past and current conditions and reasonable expectations about future trends or conditions. As the future can never be known with certainty, we have attempted to be conservative in the assumptions and to present a consensus view.

"Forecasts," such as those presented here, should be differentiated from "projections" or "targets" which are sometimes used as expressions of future growth. Projections are generally mathematical extrapolations of past trends based on past experience and extended into the future. Targets are goals or policy-directed expressions of desirable or optimal future

conditions. The DVRPC forecasts begin as projections, but were modified to accommodate any changes in trends or conditions which might reasonably be expected.

Population and employment forecasts for the nine county region for 2000, 2010 and 2020 are presented in Table 1.

DELAWARE VALLEY REGIONAL PLANNING COMMISSION, MAY 28, 1992

POPULATION FORECASTS

Population forecasts were developed for the nine-county region using a cohort-component method. This technique begins with the 1990 Census of Population disaggregated into five-year age groups of males and females. Age-specific death rates are available for each cohort and age-specific birth rates are applied to females between the ages of 15 and 44 years. County-specific infant death rates are used. These data are all available in annual published reports in Pennsylvania and New Jersey. As the population ages forward in five-year increments, births and deaths are calculated to determine the natural increase.

Calculating natural increase from births and deaths alone fails to include the third component of population change: migration. Migration is calculated for each five-year age cohort by examining the 1980 Census, the 1985 Census estimates and the 1990 Census. The difference between the expected natural increase and the Census counts is due to either in or out migration. Age-specific migration factors for each county are then introduced into the model.

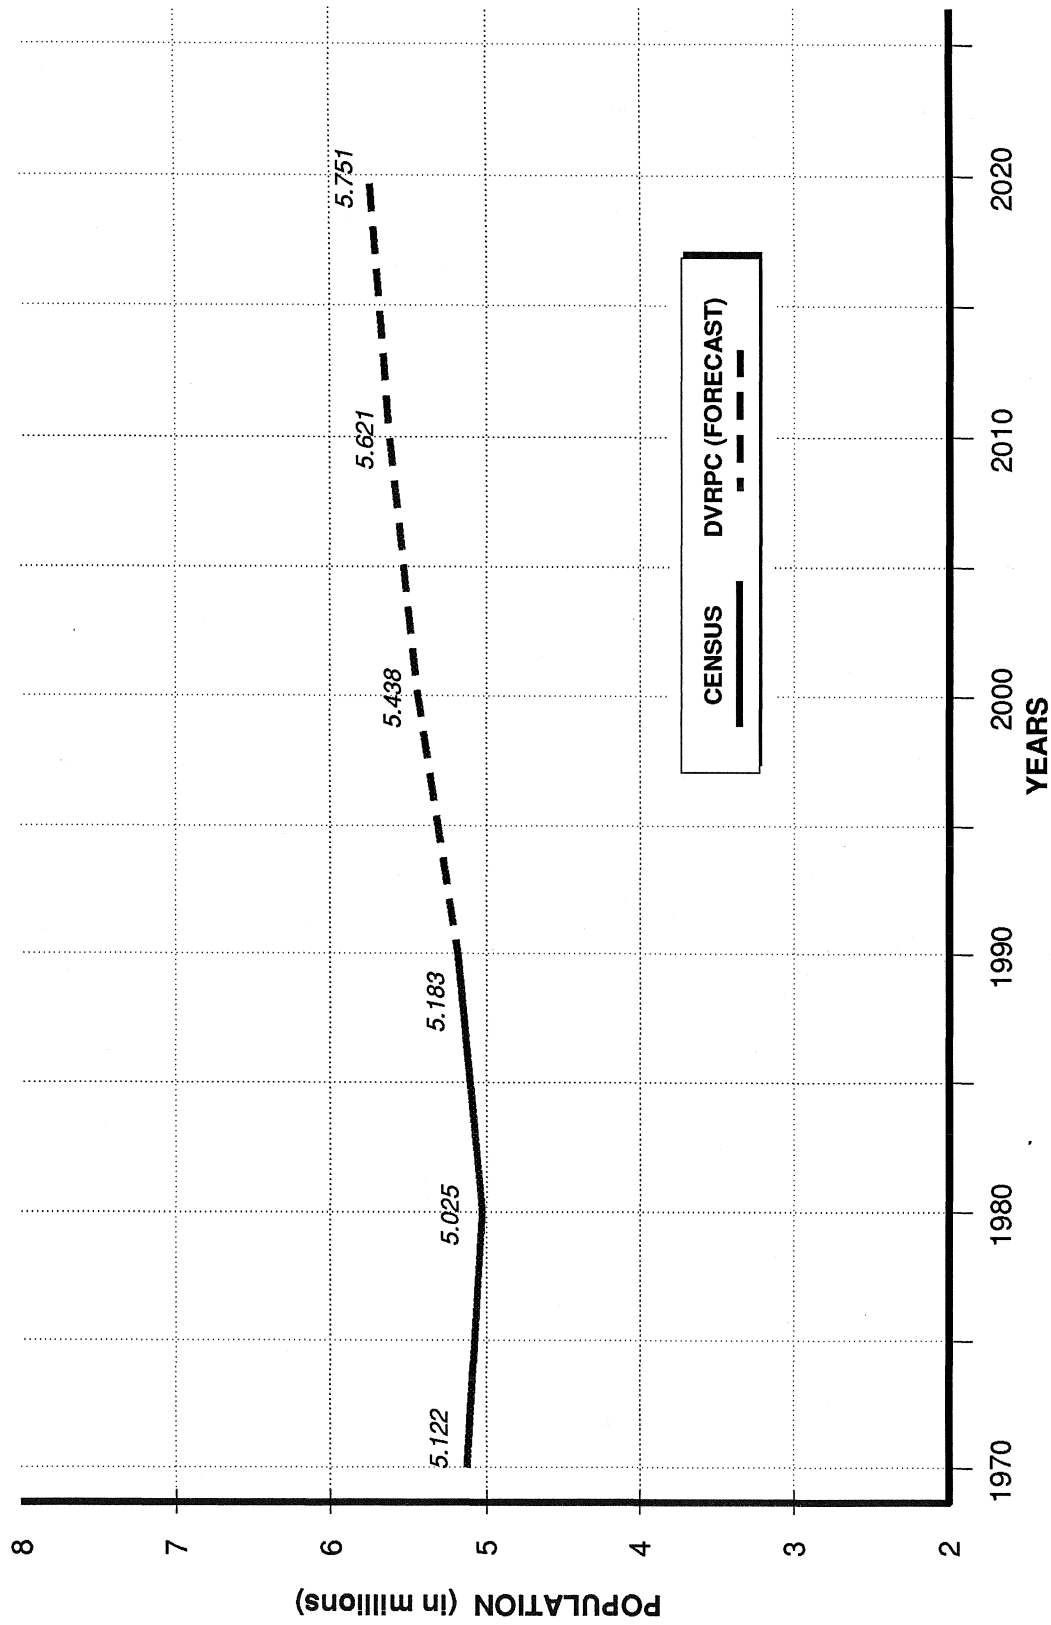

The forecast process begins by projecting the population forward using current birth, death and migration rates. These factors are then modified for each county based on changing trends, assumptions about future conditions, and considerations such as land availability for development, infrastructure changes, and market, social and political forces.

For the region as a whole, the forecasted population growth of 11% from 1990-2020, a thirty-year period, may be compared to the regional population growth of 12.4% from 1960-1990. This earlier period included a much higher birth rate, a younger population, and a growing regional economy which encouraged in-migration. Given the slowdown in birth rates, the aging of the population and the migration patterns of the region, a future slowing of population growth can be expected.

Individual counties that can still expect strong population growth include Bucks, Chester and Gloucester. Moderate growth is forecast for Burlington, Camden and Mercer counties, and slow or no growth is foreseen for Delaware, Montgomery and Philadelphia.

Population forecasts for the region and the nine counties are presented in the following graphs and tables.

DELAWARE VALLEY REGIONAL PLANNING COMMISSION, MAY 28, 1992

EMPLOYMENT FORECASTS

Forecasting future employment is more difficult than population due to the many factors which influence employment at the national, regional and local levels. While population changes generally tend to be gradual and relatively predictable, employment may vary widely due to such broader forces as foreign trade, world economics, political or military conflicts, national monetary policies, demographic trends and social forces. Local factors such as labor force availability, land prices, transportation networks and local political climate will also play an important role in determining employment levels.

Employment levels will also vary over time as national economic cycles affect the local employment profile. Finally, sources of current employment data will vary. At the federal level, the Bureau of Labor Statistics (BLS), the Bureau of Economic Analyses (BEA) and the Bureau of Census all provide data on current employment, however the methods and sources of the data vary among the three agencies, producing three different sets of results.

DVRPC forecasts are based on the BEA data, which provides the most inclusive estimate of total employment and provides a consistent data file by county from 1967. National, state and local forecasts were reviewed with a panel of economists from the Delaware Valley region to determine a regional forecast, which served as a guide for the county forecasts. Regional employment changes were calculated by decade to reflect expected economic cycles. The regional population forecasts identified labor force levels, which served as a limit on future regional employment growth.

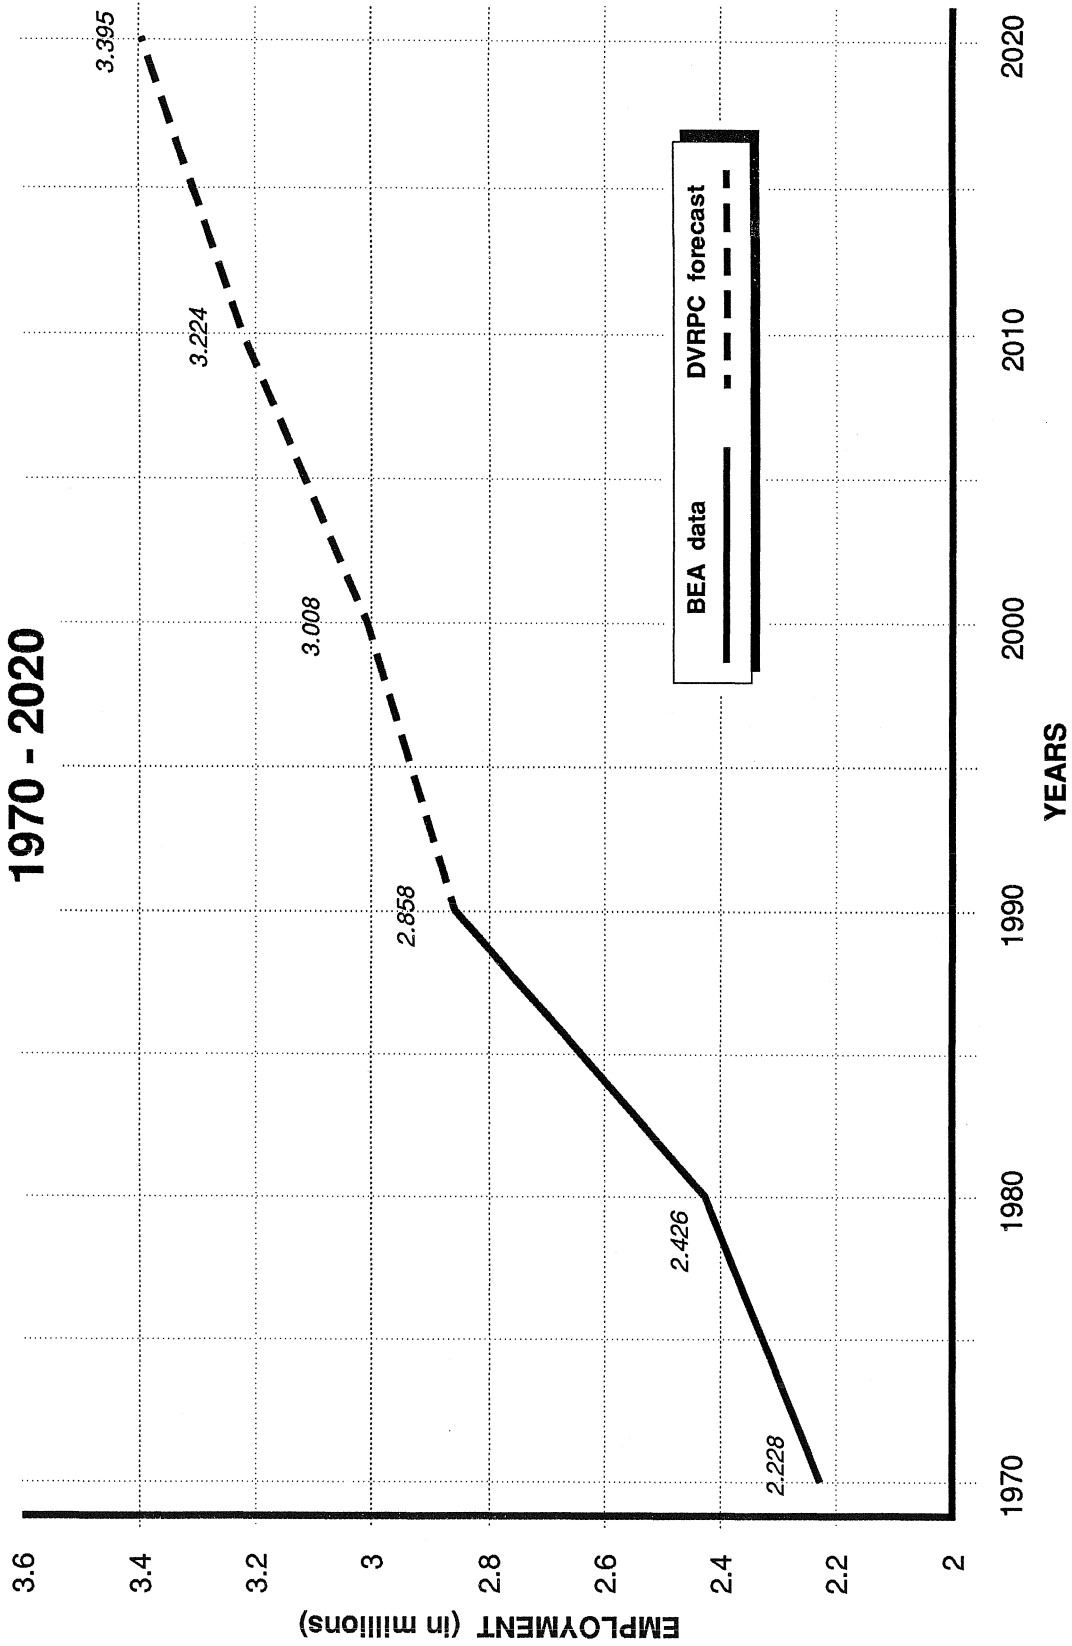

For the county employment forecasts, a shift-share analysis was conducted which examined each county's historical share of the region's employment and the trends which may shift that share either up or down. Specific factors which influenced the shift-share analysis include land and infrastructure availability, transportation access, and market trends. Counties forecast to exceed the regional employment growth rates from 1990-2020 include Bucks, Chester, Burlington and Gloucester. Counties that will more closely match the regional average include the more mature counties of Mercer, Camden and Montgomery. The older economies of Delaware County and Philadelphia will grow somewhat, but at a rate slower than the regional average.

Using the regional and county employment totals, sectoral distributions by major Standard Industrial Classification (SIC) codes were determined based on a review of past trends and patterns both nationally and locally, an assessment of changing forces or conditions which would affect each sector, and a review of state and national sectoral forecasts. For the region as a whole, sectors which will trail overall growth rates include Agriculture and Mining, Construction, Manufacturing, Transport and Utilities, and Federal civilian and military employment. State and local government will grow at a rate close to the regional

average, while Wholesale, Retail, FIRE (finance, insurance and real estate) and Services will continue to exceed the regional growth rate.

The graph and tables that follow provide details on the employment forecasts.
