Montgomery 8382A US 202 (SECTION 400), GULPH RD. TO 064C202 WARNER RD. AND I-76 (see #6799) T2005M WIDENING AND ACCESS IMPROVEMENTS US 202 covers 61 miles, traversing 27 municipalities. It serves as a major commuter route and is a vital link for business and industry. For planning purposes, US 202 has been divided into eight sections. The limits of Section 400 are from PA 252 to I-76. Traffic volumes in this section of US 202 exceed 80,000 AADT.								
This project will increase the capacity of US 202 by widening a 2.6 mile section from four to six lanes. Interchange improvements will be made at I-76 and Warner Road, US 422, Swedesford Road, and Chesterbrook. The Warner Road and Old Eagle School Road bridges will be replaced and a new ramp will be constructed parallel to US 202 along the abandoned Chester Valley Railroad right-of-way that will connect an extended Devon Park Drive and the US 422 interchange to eastbound I-76. PennDOT has identified this as an SOV Project and has completed the required Congestion Management System (CMS) Analysis. This analysis resulted in additional projects being recommended to mitigate congestion during and after the construction of this improvement. Specific CMS projects and cost estimates are yet to be determined but could include: subsidies to SEPTA for new transit service and a localized rideshare program for Chester and Montgomery Counties. Upper Merion Twp.

CAPITAL ASSET LEASE PROGRAM

The Capital Asset Lease Program provides for lease payments attributable to the acquisition, through financial leasing arrangements, of the following capital assets: utility vehicles, Philadelphia fixed rent, tire leases, and lease payments made to Amtrak by SEPTA for corridor access and operation on Amtrak's Northeast Corridor (Trenton, NJ to Wilmington, DE) and Harrisburg Line (Downingtown, PA to Center City, Philadelphia, PA). The lease payments to Amtrak represent SEPTA's allocated portion of Amtrak's cost to maintain and upgrade the right-of-way including protection of assets, maintenance and general administrative overhead.

SEPTA		signa syste cable incluc micro monit track safety	broject provides for the modernization of the Broad Street Subway Line (BSS) I system which dates back to 1928. The project will upgrade the wayside signal m to a state of good repair including local wiring, trunk vital signal and power s, and signal cases. It will also provide for operational and safety enhancements ling 1) upgrading remaining electric-mechanical relay-based interlockings with -chip processor control technology remote control; 2) upgrading real-time oring of operations from the Subway Elevated control center; and 3) reconfiguring signal circuit control lines for additional braking distance protection to enhance y operations. The improvements included in this replacement in kind option will de a safe, reliable signal system for the Broad Street Subway operation.

5033 T2005O		FRANKFORD TRANSPORTATION CENTER AT BRIDGE-PRATT TERMINAL RECONSTRUCTION This project provides for the construction of a new transportation center at the Bridge-Pratt Terminal and the realignment and reconstruction of the elevated structure between Dyre Avenue and Bridge Street. The construction of the Frankford Transportation Center will consolidate the Market Frankford Line and surface route operations and commuter parking into one concentrated area. Pedestrian and vehicle traffic, and transit movements will be integrated to minimize movement conflicts and facilitate passenger access and transfer activities. All of this will be covered through the construction of a station building and parking garage; extensive signal, track, traction power and busway improvements in and around the terminal area; and the realignment of the elevated structure leading to the terminal between Dyre Avenue and Bridge Street.

<u>SEPTA</u> S060 T1996M

RAIL STATION AND PARKING PROGRAM

This project provides for the rehabilitation of rail stations including parking, signage, lighting, station facilities and parking expansion. In total, there are 280 stations and 233 parking facilities which are maintained by SEPTA. While capital improvements to stations and parking facilities have been made in the past, this program will establish an annual plan to bring stations and parking facilities into a state of good repair. As part of this plan, SEPTA will aggressively pursue opportunities to expand parking availability in the five-county service area. Currently, there are 50 regional rail stations where parking facilities are 95 to 100 percent filled on a daily basis. Prior funding for parking expansion projects will resolve some of these parking limitations, but many more locations need to be addressed. By providing additional parking, SEPTA will be better able to attract new rail commuters, thus increasing the Authority's operating revenue and further assisting in the mitigation of traffic congestion and air pollution for the region.

initiatives within the five county SEPTA service area. Through this program, SEPTA will be able to address the transit needs of newly emerging public transit markets, as well as expanding service to existing markets. As the demographics and needs of the region change, SEPTA must be in the position to capitalize and respond to these changes, so that the Authority can provide its customers with quality, convenient and efficient public transit service.

SEPTA S087		FARE COLLEC	TION SYSTEM UPGRADE	
X SEPTA		process. methods. SEPTA to a prelimir strategy f and make engineeri technolog collection	ect provides for the modernization and automation of SEPTA's fare collection SEPTA currently utilizes close to 60 different fare instruments and collection . Many of these instruments are beyond their useful lives making it difficult for o completely control and account for its revenue stream. SEPTA will conduct hary engineering analysis of the current fare collection system to develop a for modernization and technological improvements to address problem areas e recommendations for implementation. This project will also include the final ing and construction phases of this modernization effort. New fare collection gy will attract riders to the system, reduce costs associated with revenue h, increase revenue recovery, and facilitate more accurate gathering of information.
