

# DELAWARE VALLEY DATA

DELAWARE VALLEY REGIONAL PLANNING COMMISSION

## ANALYTICAL DATA REPORT

Land Use in the Delaware Valley, 2005

No. 16  
July 2008

The Delaware Valley Regional Planning Commission (DVRPC) is an interstate, intercounty and intercity agency serving the Philadelphia-Camden-Trenton metropolitan area. As the region's metropolitan planning organization (MPO), the commission provides technical assistance and services to its member state and local governments. *Delaware Valley Data* is our periodic series of free data bulletins and analytical data reports. This analytical data report provides 2005 land use data for the DVRPC region's counties and municipalities and compares it to land uses in 2000. The DVRPC region includes Bucks, Chester, Delaware, Montgomery and Philadelphia counties in Pennsylvania; and Burlington, Camden, Gloucester, and Mercer counties in New Jersey. In Philadelphia, data is provided for each of the city's 12 planning areas.

The 2005 land use file is based on digital orthophotography created from aerial surveillance completed in the Spring of 2005. Orthophotography combines the image characteristics of an aerial photograph with the geometric qualities of a map. Unlike a traditional aerial photograph, distortions due to the camera lens, aircraft altitude, and changes in relief (hills, stream valleys, and buildings, for example) are corrected, permitting direct measurement of distances, areas, and angles. All ground features are shown in their actual positions, and detailed portions of ground features that are typically omitted or generalized on traditional maps are evident, allowing more accurate interpretation. The addition of color to the 2005 aerials further enhanced the photographs and improved the accuracy of their interpretation.

Land uses were classified into 31 separate categories identical to those used in 2000. All annotation and digitizing was done on-screen ("heads up") using ESRI ArcGIS 8 software at the 1:2400 (1 inch = 200 feet) scale. In addition to the 17 categories utilized in DVRPC's 1995 and revised 1990 land use files, the Commission's 2000 and 2005 land use files delineate the parking areas associated with each of 13 land use categories and include a separate category for agricultural bogs, located almost exclusively in southern Burlington County.

The thirty one 2005 land use categories (listed below) are identical to those delineated in 2000 and are defined in Appendix A.

- single-family detached residential
- multi-family residential
- parking – multi-family residential
- residential row homes (previously "single-family attached")
- parking - residential row homes
- mobile homes
- parking - mobile homes
- manufacturing - light industrial
- parking - light manufacturing
- manufacturing - heavy industrial
- parking - heavy manufacturing
- commercial
- parking - commercial
- community services
- parking - community services
- military
- parking - military
- recreation
- parking - recreation
- agriculture
- parking - agriculture
- agricultural bog
- mining

- transportation
- parking – transportation
- utility
- parking – utility
- parking - mining
- wooded
- vacant
- water

Changing land uses have in some cases made it difficult to accurately interpret aerial photographs. The use of older buildings for purposes different than the original use, for example, can make it difficult to accurately identify the current use. The advent of flex space has likewise made it more difficult to differentiate between commercial/office spaces and industrial warehouses. Because these distinctions are often best made based on local knowledge and experience, DVRPC asked its member county planning staffs to review the draft land use files for specific errors. The Commission's land use file was then revised accordingly.

### **Historical background: DVRPC's earlier land use files**

Land use information and analysis is a fundamental tool in the planning process. Since 1970, DVRPC has produced land use files for the nine-county Delaware Valley region, based on information derived from aerial photography. Originally updated every 10 years, DVRPC's land use data is now updated based on aerial surveillance gathered every 5 years.

DVRPC produced an extensive land use data file and regional land use map in the early 1970's, based on the Department of Housing and Urban Development/Bureau of Public Records (HUD/BPR) classification system. The 1970 land use file included 88 separate land use categories (later modified to a total of 98 categories), which were then grouped into 12 major categories. The data was tabulated by census block (over 66,000 aerial units), and the resulting file contained over 1 million separate entries. The data was then mapped at a scale of 1 inch = 1 mile, necessitating the generalization of the original data into units that were appropriate for mapping.

In the early 1980's, the 1970 land use file was updated in a very limited way by aggregating the land use data to 14 major categories and updating only the development changes on parcels of 25 acres or more. While this interim product provided a crude data base and map, it was subsequently noted that up to one-third of all development changes over the decade were on small parcels not captured by the large parcel limit. Historical comparisons between the 1980 files and any other DVRPC land use file are therefore generally not drawn.

The acquisition of a Computer Assisted Mapping (CAM) and Geographic Information System (GIS) in the early 1990's has significantly altered DVRPC's production of land use data. In 1991, the Commission completed a digital land use file based on aerial photography gathered in April and November of 1990. Land use was interpreted in 14 separate categories from 1,330 aerials at a scale of 1 inch = 400 feet. The annotated photographs were digitized to create CAM line work which was registered to USGS 1 inch = 2,000 feet quad maps. Each area was annotated with its land use classification and the results incorporated into the DVRPC CAM/GIS system.

In 1998, DVRPC completed and released land use information based on the interpretation of aerial photographs taken in the Spring of 1995. Land uses were interpreted in 17 separate categories from 1,330 photo atlas sheets at a scale of 1 inch = 400 feet, and again digitized to create CAM line work registered to USGS 1 inch = 2,000 feet quad maps. Also in 1998, the 1990 land use files were revised after a review of the original files identified some inconsistencies in the detail for parking and some other small parcels. It was also decided at that time that it would be useful to attach parking to its related land use to allow an alternative method of data organization and make the 1990 file consistent with the categories used in the 1995 land use file.

Because of these changes in the way land uses were classified, data in this bulletin should not be compared to any DVRPC land use data issued prior to *Data Bulletin #58: 1990 Revised Land Use by Minor Civil Division* (August 1998). Additionally, the use of digital orthophotography as opposed to traditional aerial photography (beginning in 2000) and the addition of color to the 2005 aerials have allowed more accurate land use

interpretation, particularly when differentiating between various developed uses. While reasonable comparisons can now be drawn between the 2000 and 2005 land use files, users should be cautious when comparing the 2000 and 2005 data to earlier land use data, particularly within specific developed land use categories and/or specific municipalities.

Appendices B and C provide municipal-level land use data (in square miles and acres, respectively), while Appendix D provides county-level maps illustrating 2005 land use. To allow comparison with DVRPC's earlier land use files, the numbers have been aggregated using the same general methodology and categories as were used previously. Areas of single-family detached units, row homes, and mobile homes, for example, have been aggregated as "single-family residential". All identified parking lots (regardless of their related use) have been included in the transportation category, and light and heavy industrial uses have been combined as "manufacturing". As in previous DVRPC land use files, 25% of the residential land in every county except Philadelphia was subtracted from the residential land area and added to transportation, to account for local roads. In Philadelphia, 25% was subtracted from all classifications except military, mining, and water, and added to transportation, to account for the increased density of the local roadway network.

## Highlights

Tables 1 and 2 summarize county and regional land use data, and Table 3 describes changes in residential land area, other developed areas (including manufacturing, transportation, utility, commercial, community service, military, mining, and recreation uses), agricultural area (including bogs) and other undeveloped land areas (including vacant and wooded land areas plus water) between 2000 and 2005. Highlights of the 2005 land use file include the following:

- Of the region's total land area in 2005, 19% was in residential use (predominantly single-family); 19% was in other developed uses; 21% was in agricultural use (down from 22% in 2000); an additional 37% was either vacant or wooded (also down since 2000, from 38%); and 3% was covered by water. By comparison, in 1990, 17% of the region's land area was residential; 14% was in other developed uses; 2% was covered by water; and 67% was in agricultural use or otherwise undeveloped.
- The rate of development between 2000 and 2005 slowed compared to the rate between 1990 and 2000. From 1970 to 1990, development occurred at a rate of approximately one acre per hour; between 1990 and 2000, the rate accelerated to one acre every 45 minutes. **Between 2000 and 2005, approximately one acre of land was developed every 65 minutes.**
- Although the region's population increased by only 2% between 2000 and 2005, the residential land area increased by approximately 7% (a gain of almost 22,000 acres). The amount of land developed per additional person, however, has declined slightly since 2000. Between 1990 and 2000, approximately one-quarter acre was developed with residential uses for every additional resident in the region. **Between 2000 and 2005, just over two-tenths of an acre was developed with residential uses for every resident that the region gained over the five-year period.** Other developed uses consumed an additional 17,896 acres, for a net increase of almost 40,000 acres in developed land over the five-year time period.
- Chester and Bucks counties (in Pennsylvania), and Burlington and Camden counties (in New Jersey) had the highest net increase in residential acres between 2000 and 2005. In terms of percentage increase, Chester and Gloucester counties each experienced a 9% increase in residential acreage, followed by Burlington County, with an increase of 7%.
- Between 2000 and 2005, the DVRPC region lost over 34,600 acres of agricultural land area and an additional 5,100 acres of other undeveloped areas, for a **total loss of almost 40,000 undeveloped acres** (an overall decline of over 3% in undeveloped land area since 2000). Chester, Montgomery, and Gloucester counties realized the greatest net losses of agricultural land during over the five-year time period, while Burlington County saw the greatest decline in vacant or wooded acres.

**Table 1: 2005 land use in square miles**

	Total square miles	Single-family resid.	Multi-family resid.	Industrial	Transportation	Utility	Commercial	Comm. services	Military	Recreation	Agric. (including bogs)	Mining	Wooded	Vacant	Water

Source: Delaware Valley Regional Planning Commission, July 2008. For comparison purposes, mobile homes and row homes have been classified as single-family residential units and all parking uses have been included in the transportation category (regardless of the use with which they are associated). Twenty-five percent of all residential land in every county except Philadelphia has been subtracted from the residential land area and added to transportation to account for local roads. In Philadelphia, 25 percent has been subtracted from all classifications, except military, mining, and water, and added to transportation to account for the increased density of the local road network. Small differences (less than 0.1%) between the 2005 total area and the areas listed in earlier DVRPC reports are attributable to improvements in GIS capabilities.

**Table 2: 2005 land use in acres**

County	Total acres	Single-family resid.	Multi-family resid.	Industrial	Transportation	Utility	Commercial	Comm. services	Military	Recreation	Agric. (including bogs)	Mining	Wooded	Vacant	Water

Source: Delaware Valley Regional Planning Commission, July 2008. "Residential" includes single-family and multi-family residential; "other developed" includes industrial, transportation, utility, commercial, community service, military, recreation, and mining; "agricultural" includes both agricultural and agricultural bogs; and "other undeveloped" includes wooded and vacant land areas and water.

Table 4 identifies municipalities that experienced the greatest absolute declines in undeveloped land area between 2000 and 2005 (and, conversely, the greatest increases in developed acres). Municipalities that realized the greatest losses of undeveloped acres include Limerick, Upper Providence, and New Hanover townships in Montgomery County; Harrison and Woolwich townships in Gloucester County; East Nottingham Township in Chester County; and Mansfield Township in Burlington County. These seven townships realized a combined loss of over 5,800 acres of undeveloped land, 99 percent of which was farmland in 2000.

Municipalities that experienced the largest percentage losses of undeveloped lands are identified in Table 5. These communities include many smaller boroughs and older developed communities, such as Pennsburg, Red Hill, and Telford boroughs in Montgomery County; Chester Township and Ridley Park Borough in Delaware County; and Dublin Borough in Bucks County. While some of these smaller losses may be attributable to improvements in the interpretation of the photographs, they also may be attributable either to the development of areas that were previously identified as vacant or to development of the last remaining land areas in these locations.

The land use tables and appendices in this analytical report are available as Excel files through the DVRPC website ([www.dvrpc.org](http://www.dvrpc.org)). Municipal-level data for each of the 31 separate land use categories is also available by contacting DVRPC. Additionally, digital GIS files of 2005 or previous land use data may be ordered through DVRPC (contact [mapsales@dvrpc.org](mailto:mapsales@dvrpc.org) for more information). **Source: Delaware Valley Regional Planning Commission, July 2008. "Undeveloped" acres include agricultural, vacant, and wooded land areas plus water.**

**Appendix A**  
**Land Use Categories**

## Appendix A: Land use categories

---

**01000. Residential – Single-family detached:** Single-family detached units including their lots (where lot boundaries are evident). In cases where no lot boundaries are evident, the boundaries are estimated.

**02000. Residential – Multi-family:** Any multiple residential units, with the exceptions of row homes and mobile homes. Examples of multifamily units include duplexes, triplexes, apartments and condominiums.

**02009. Parking – Multi-family:** Parking lots of 10 spaces or more associated with multi-family areas.

**02010. Residential – Row home:** A series of connected single-family homes forming a continuous row, usually located in an urban area. Condominiums are identified as multi-family, **not as** row homes.

**02019. Parking – Row home:** Parking lots of 10 spaces or more associated with row home areas.

**02020. Residential – Mobile home:** Areas containing a large identifiable group of transportable single-family dwellings.

**02029. Parking – Mobile home:** Parking lots of 10 spaces or more associated with mobile home areas.

**03000. Manufacturing – Light industrial:** Industrial parks and small-scale manufacturing and assembly. Light industrial uses are often “cleaner looking” than heavy industrial sites, and create less smoke, dust, and noise.

**03009. Parking – Light industrial:** Parking lots of 10 spaces or more associated with light industrial areas.

**03010. Manufacturing – Heavy industrial:** Heavier manufacturing uses such as oil refineries, chemical plants, steel and metal fabrication, shipbuilding, grain elevators, port terminals, and manufacturing and assembly facilities (such as automobile production or pharmaceutical production).

**03019. Parking – Heavy industrial:** Parking lots of 10 spaces or more associated with heavy industrial areas.

**04000. Transportation:** All land devoted to rail, air, marine, and highway transportation. Examples include limited-access highways, ramps; railroad facilities (including switching yards, stations, and roundhouses); airports; and truck and bus terminals. On the land use maps, two-lane roads and residential streets are not identified as “Transportation”, but are included within their primary land use. On the data tables, 25 percent of the residential land area in the suburban countries and 25 percent of all categories except military, mining, and water in Philadelphia was subtracted from its original category and shifted to transportation, to account for local roads. The transportation category takes precedence over any co-existing land use category (for example, highways over utility right-of-ways).

**04009. Parking – Transportation:** Parking lots of 10 spaces or more associated with transportation areas.

**05000. Utility:** Uses such as power generation and substations, major transmission lines and towers, water infiltration and storage tanks, wastewater treatment facilities, landfills, and recycling centers. Reservoirs are identified as “Water”, not as “Utility”. Transmission lines take precedence over certain co-existing land uses, including agriculture, vacant, and wooded.

**05009. Parking – Utility:** Parking lots of 10 spaces or more associated with utility areas.

**06000. Commercial:** Areas containing structures primarily used for the sale of products and services. Examples include central business districts, malls, strip malls, shopping centers, hotels and motels, and

warehousing and distribution centers. All landscaped areas associated with commercial areas are also included in this category.

**06009. Parking – Commercial:** Parking lots of 10 spaces or more associated with commercial areas.

**07000. Community services:** Structures that provide non-commercial services. Examples include educational facilities (schools, but not the recreational fields associated with them); places of worship; cemeteries; hospitals and medical centers; museums; government centers (but not including military); correctional facilities; and social clubs. All landscaped areas associated with a community services land use are also included in this category.

**07009. Parking – Community services:** Parking lots of 10 spaces or more associated with community service areas.

**08000. Military:** Military installations, such as army bases and camps, armories, air bases, naval bases, air stations, and Coast Guard bases.

**08009. Parking – Military:** Parking lots of 10 spaces or more associated with military areas.

**09000. Recreation:** Areas developed for recreational activities. These include recreational parks and playgrounds (including those associated with schools), golf courses, picnic areas, camps, fairgrounds, recreational boat launches, swimming pools, theaters, stadiums, arenas, zoos, amusement parks, and non-military firing ranges.

**09009. Parking – Recreation:** Parking lots of 10 spaces or more associated with recreation areas.

**10000. Agriculture:** Land devoted to crops, pastures, orchards, tree farms, and other agricultural uses. Also included are nurseries, greenhouses, sod farms, horse farms, and cattle, pig, or dairy farms. The farmstead and associated buildings are included in this category. Large transmission lines that clearly continue through and agricultural area are categorized as utility, which takes precedence over agriculture.

**10009. Parking – Agriculture:** Parking lots of 10 spaces or more associated with agricultural areas.

**10010. Agricultural bog:** Bogs associated with cranberry farms, located primarily in southern Burlington County. Farmland surrounding these bogs is categorized as agriculture.

**11000. Mining:** Mining includes any extractive use, principally quarries and sand pits.

**11009. Parking –Mining:** Parking lots of 10 spaces or more associated with mining areas.

**12000. Wooded:** Areas of contiguous canopy or solid tree cover, woodlands, and natural lands. Hedgerows (windrows) and wooded areas associated with residences are not interpreted as wooded. Large transmission lines that clearly continue through a wooded area are categorized as utility, which takes precedence over wooded.

**12010. Vacant:** Areas that are not clearly wooded, agricultural, developed, landscaped, cleared, or unused but are clearly tied to other uses. Large transmission lines that clearly continue through a vacant area are categorized as utility, which takes precedence over vacant.

**13000. Water:** Water areas include rivers, canals, streams, lakes, reservoirs, and ponds that have two definable boundaries. Single line hydrology is not defined as water. When co-existing with another land use other than transportation, the water use takes precedence.

**Appendix B**

**2005 Land use (square miles)**

**Appendix B: 2005 land use (square miles)**

**Source:** Delaware Valley Regional Planning Commission, June 2008. For comparison purposes, mobile homes and row homes have been classified as single-family residential units, and all parking areas have been included in the transportation category (regardless of the use with which they are associated). Twenty-five percent of all residential land in every county except Philadelphia has been subtracted from the residential land area and added to transportation, to account for local roads. In Philadelphia, 25% has been subtracted from all classifications except military, mining, and water and added to transportation, to account for the increased density of the local road network.

**Source:** Delaware Valley Regional Planning Commission, June 2008. For comparison purposes, mobile homes and row homes have been classified as single-family residential units, and all parking areas have been included in the transportation category (regardless of the use with which they are associated). Twenty-five percent of all residential land in every county except Philadelphia has been subtracted from the residential land area and added to transportation, to account for local roads. In Philadelphia, 25% has been subtracted from all classifications except military, mining, and water and added to transportation, to account for the increased density of the local road network.

Analytical data report #16 is the latest in a series of reports designed to complement our traditional data releases. For more information on analytical data reports, regional data bulletins, or data snapshots, please visit the Delaware Valley Regional Planning Commission's website ([www.dvrpc.org](http://www.dvrpc.org)) or contact DVRPC at the telephone number below.

The Delaware Valley Regional Planning Commission was established in 1965 by interstate compact between Pennsylvania and New Jersey to plan for the orderly growth and development of the region and to provide a variety of planning and technical assistance services responding to regional issues. DVRPC maintains a significant database for twenty-eight counties encompassing New Jersey, Delaware, Pennsylvania, and Maryland. Included in the database are data profiles at the regional, county, and municipal levels and for other census geographies as requested. DVRPC produces a diverse range of services, including demographic and economic data and projections; mapping and aerial photography; computer assisted mapping; geographic information systems; impact studies; and policy and program development.

DVRPC fully complies with Title VI of the Civil Rights Act of 1964 and related statutes and regulations in all programs and activities. DVRPC's website may be translated into Spanish, Russian, and Traditional Chinese online by visiting [www.dvrpc.org](http://www.dvrpc.org). Publications and other public documents can be made available in alternative languages or formats, if requested. For more information, please call (215) 238-2871.
