DELAWARE VALLEY dvrpc REGIONAL PLANNING COMMISSION

ADR 20 I January 2013

Analytical Data Report

Land Use in the Delaware Valley, 2010

DELAWARE VALLEY data

Delaware Valley Regional Planning Commission (DVRPC) is an interstate, inter-county, and intercity agency serving the Philadelphia-Camden-Trenton metropolitan area. As the region's metropolitan planning organization (MPO), the commission provides technical assistance and services to its member state and local governments. Delaware Valley Data is our periodic series of free regional data bulletins, analytical data reports, data reference guides, and data snapshots.

This analytical data report provides 2010 land use data for the DVRPC region's counties and municipalities and compares it to previous decades. The DVRPC region includes Bucks, Chester, Delaware, Montgomery, and Philadelphia counties in Pennsylvania; and Burlington, Camden, Gloucester, and Mercer counties in New Jersey. In the City of Philadelphia (which is both a county and a municipality), data is provided for each of the city's 18 planning districts.

Background

Land use information and analysis is a fundamental tool in the planning process. DVRPC's 2010 land use file is based on digital orthophotography created from aerial surveillance completed in the spring of 2010. Orthophotography combines the image characteristics of an aerial photograph with the geometric qualities of a map. Unlike a traditional aerial photograph, distortions due to the camera lens, aircraft altitude, and changes in relief are corrected, permitting direct measurement of distances, areas, and angles. All ground features are shown in their actual positions, and detailed portions of ground features that are typically omitted or generalized on traditional maps are evident, allowing more accurate interpretation. Annotation and digitizing was done on-screen at the 1:2400 (1 inch = 200 feet) scale.

Land uses were classified into 31 separate categories identical to those used in 2005. Beginning in 2000, the Commission's land use files delineate the parking areas associated with each of 13 land use categories and include a separate category for agricultural bogs (located almost exclusively in southern Burlington County) in addition to the 17 categories utilized in DVRPC's 1995 and revised 1990 land use files. The 31 2010 land use categories (listed below and defined in Appendix A) are identical to those delineated in 2005:

- Single-family detached residential
- Multifamily residential
- Parking - multifamily residential
- Residential row homes (previously "single-family attached")
- Parking - residential row homes
- Mobile homes
- Parking - mobile homes
- Manufacturing - light industrial
- Parking - light industrial
- Manufacturing - heavy industrial
- Parking - heavy industrial
- Transportation
- Parking - transportation
- Utility
- Parking - utility
- Commercial
- Parking - commercial
- Community services
- Parking - community services
- Military
- Parking - military
- Recreation
- Parking - recreation
- Agriculture
- Parking - agriculture
- Agricultural bog
- Mining
- Parking - mining
- Wooded
- Vacant
- Water

Changing land uses have in some cases made it difficult to accurately interpret aerial photographs. The use of older buildings for purposes different than the original use, for example, can make it difficult to accurately identify the current use. The advent of flex space has likewise made it more difficult to differentiate between commercial/office spaces and industrial warehouses. Because these distinctions are often best made based on local knowledge and experience, DVRPC asked its member county planning staffs to review the draft land use files for specific errors. The Commission's land use file was then revised accordingly.

DVRPC's Previous Land Use Files

Since 1970, DVRPC has produced land use files for the nine-county Delaware Valley region, based on information derived from aerial photography. Originally updated every 10 years, DVRPC's land use data is now updated based on aerial surveillance gathered every five years.

DVRPC produced an extensive land use data file and regional land use map in the early 1970's, based on the Department of Housing and Urban Development/Bureau of Public Records (HUD/BPR) classification system. The 1970 land use file included 88 separate land use categories (later modified to a total of 98 categories), which were then grouped into 12 major categories. The data was tabulated by census block (over 66,000 aerial units), and the resulting file contained over one million separate entries. The data was then mapped at a scale of one inch to one mile, necessitating the generalization of the original data into units that were appropriate for mapping.

In the early 1980's, the 1970 land use file was updated using a very limited method, by aggregating the land use data to 14 major categories and updating only the development changes on parcels of 25 acres or more. While this interim product provided a crude data base and map, it was subsequently noted that up to one-third of all development changes over the decade were on small parcels not captured by the large parcel limit. Historical comparisons between the 1980 files and any other DVRPC land use file are therefore not recommended.

The acquisition of a Computer Assisted Mapping (CAM) and Geographic Information Systems (GIS) in the early 1990's has significantly altered DVRPC's production of land use data. In 1991, the Commission completed a digital land use file based on aerial photography gathered in April and November 1990. Land use was interpreted in 14 separate categories from 1,330 aerials at a scale of one inch to 400 feet. The annotated photographs were digitized to create CAM line work which was registered to USGS one-inch-to-2,000-feet quad maps. Each area was annotated with its land use classification and the results incorporated into the DVRPC CAM/GIS system.

In 1998, DVRPC completed and released land use information based on the interpretation of aerial photographs taken in the spring of 1995. Land uses were delineated in 17 separate categories based on 1,330 photo atlas sheets at a scale of one inch to 400 feet, and again digitized to create CAM line work registered to USGS one-inch-to-2,000-feet quad maps. At the same time, the 1990 land use files were revised after a review of the original files identified some inconsistencies in the detail for parking and some other small parcels. At that time, DVRPC staff also decided that it would be useful to attach parking to its related land use to allow an alternative method of data organization and make the 1990 file consistent with the categories used in the 1995 land use file.

Because of these changes in the way land uses were classified, data in this bulletin should not be compared to any DVRPC land use data issued prior to *Data Bulletin #58: 1990 Revised Land Use by Minor Civil Division* (August 1998). Additionally, the use of digital orthophotography (beginning in 2000), as opposed to traditional aerial photography, and the addition of color to the aerials in 2005 allowed more accurate land use interpretation, particularly when differentiating between various developed uses. While reasonable comparisons can be drawn between DVRPC's land use files produced in 2000 or later, users should be cautious when comparing these later files to earlier land use data, particularly within specific developed land use categories and/or specific municipalities.

2010 Land Use

Figure 1 illustrates the location of residential; other developed; agriculture; and wooded or vacant land or water in 2010. Appendix B provides county-level maps illustrating 2010 land use, and Appendices C and D provide municipal-level land use data (in square miles and acres, respectively). To allow comparison with DVRPC's earlier land use files, the numbers have been aggregated using the same general methodology and categories that were used previously. Areas of single-family detached units, row homes, and mobile homes have been aggregated as "single-family residential." All identified parking lots (regardless of their related use) have been included in the transportation category, and light and heavy industrial uses have been combined as "manufacturing."

Figure 2: Land Use in the Delaware Valley, 1990 through 2010

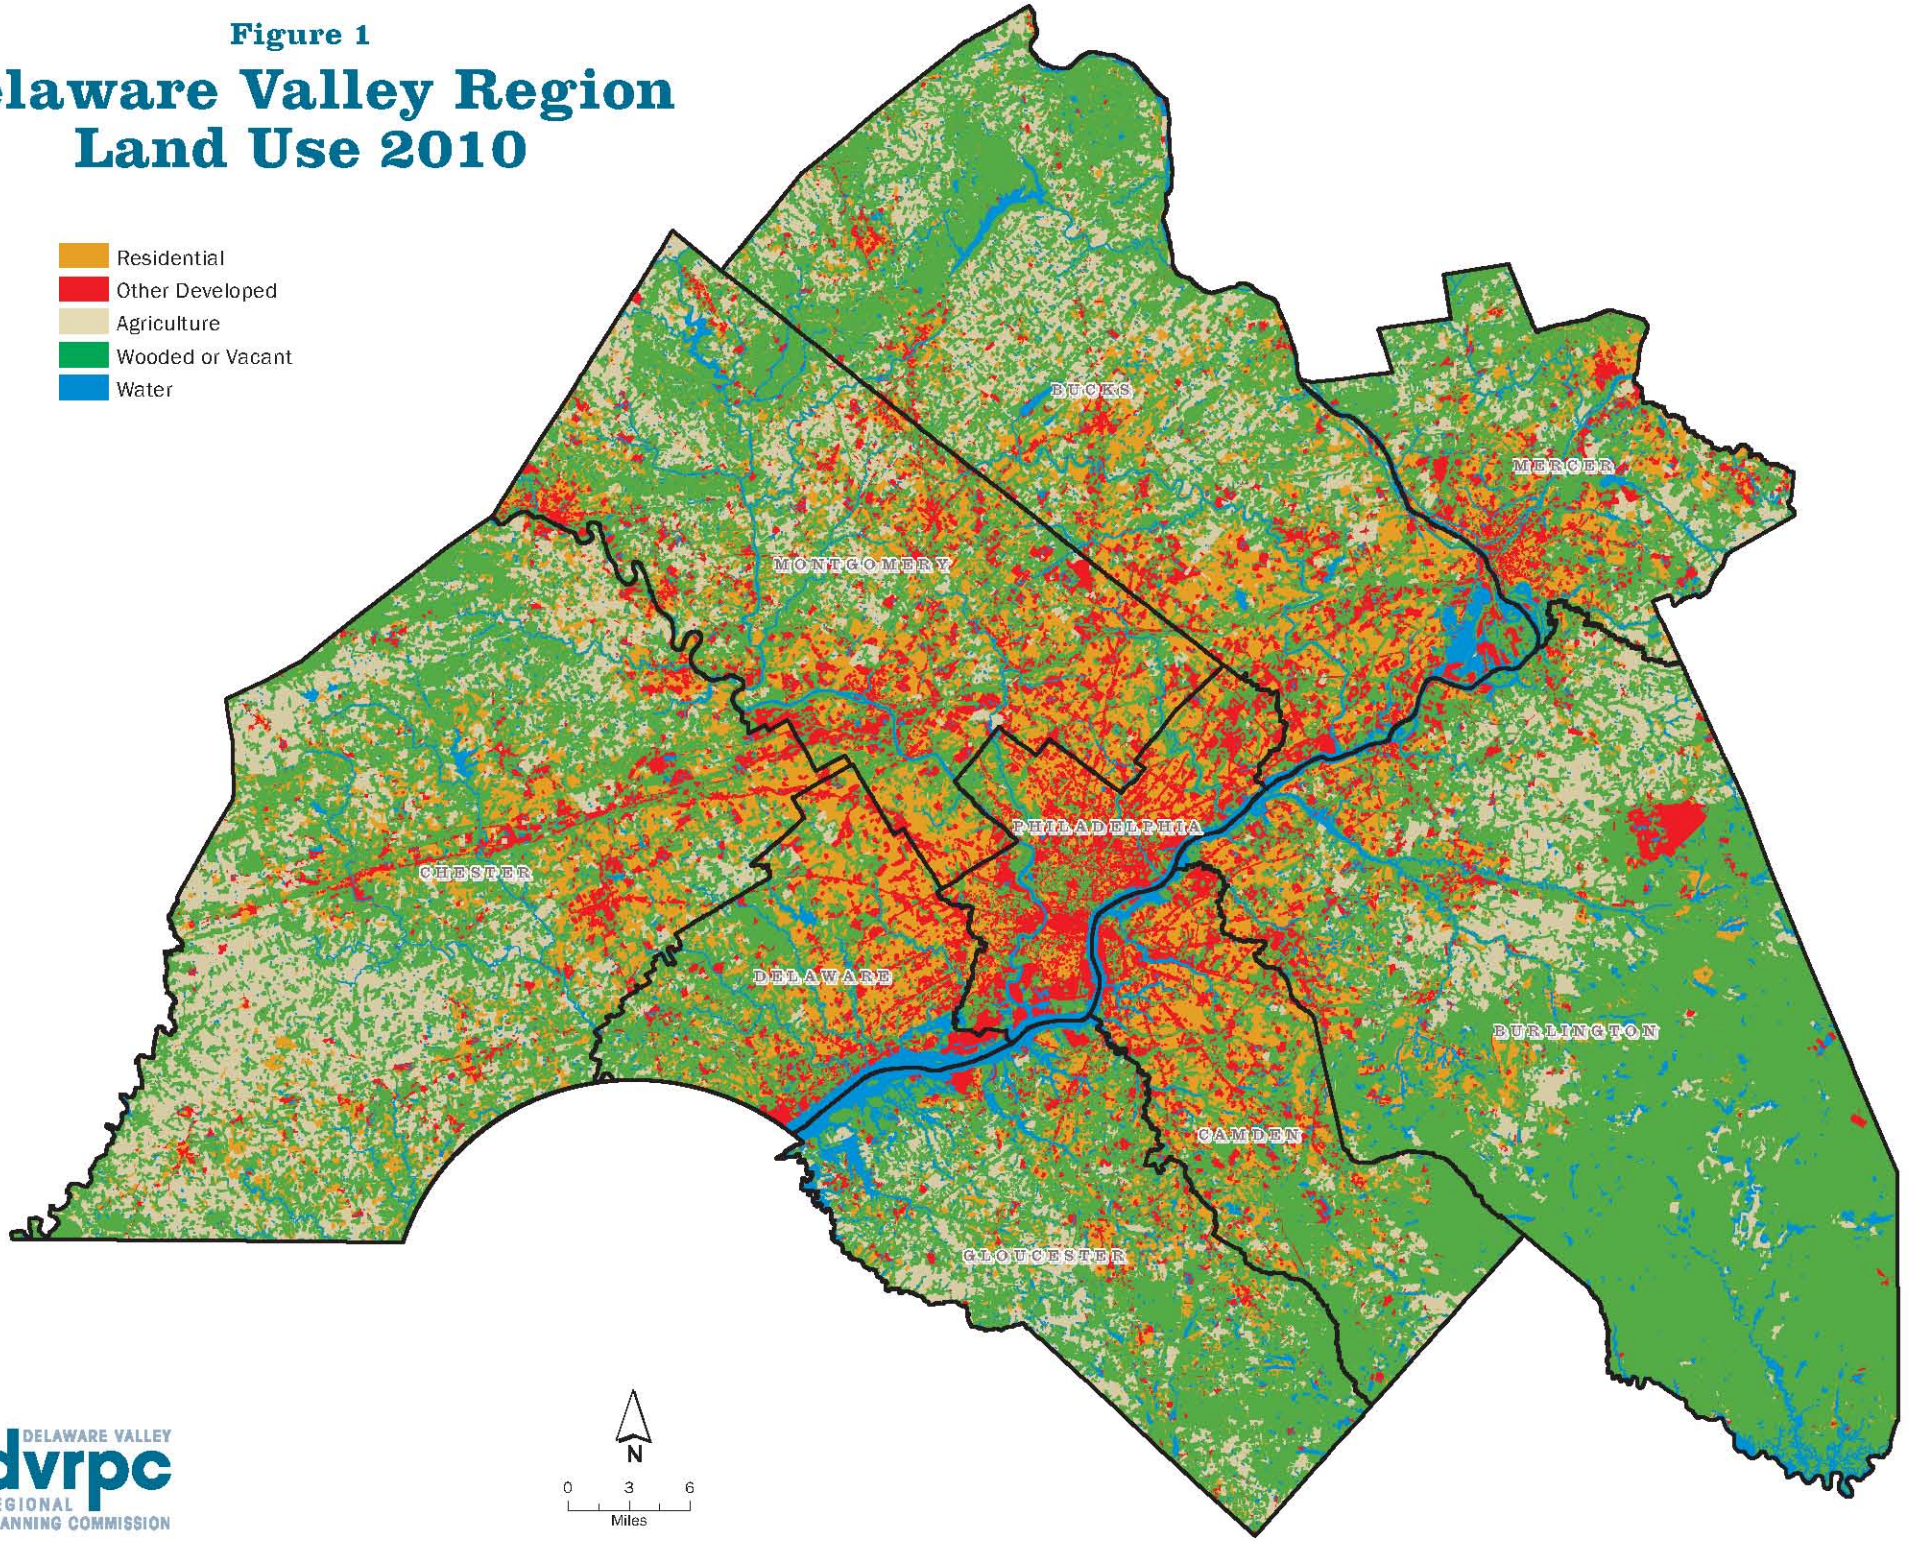
Source: DVRPC, January 2013. Numbers in italics represent the number of acres in each category. For comparison purposes, all parking uses have been included in the transportation category (regardless of the use with which they are associated).Twenty-five percent of all residential land in every county except Philadelphia has been subtracted from the residential land area and added to transportation to account for local roads. In Philadelphia, 25 percent has been subtracted from all classifications, except military, mining, and water, and added to transportation to account for the increased density of the local road network.

As in previous DVRPC land use files, 25 percent of the residential land in every county except Philadelphia was subtracted from the residential land area and added to transportation, to account for local roads. In Philadelphia, 25 percent was subtracted from all classifications except military, mining, and water, and added to transportation, to account for the increased density of the local roadway network.

Figure 2 illustrates the proportion of the region's acres that were developed, agricultural, or undeveloped from 1990 through 2010.

Figure 1

Delaware Valley Region Land Use 2010



DELAWARE VALLEY dvrpc REGIONAL PLANNING COMMISSION

Tables 1 and 2 summarize county and regional land use data in acres and by percent, respectively. Of the region's 2.4 million acres, over 21 percent was in residential use in 2010, 19 percent was in other developed uses, 20 percent was in agricultural use (down from 21 percent in 2005), and 40 percent (over 968,000 acres) was vacant, wooded, or covered by water. By comparison, in 1990, 17 percent of the region's land area was residential, 14 percent was in other developed uses, 26 percent was in agricultural use, 39 percent was either vacant or wooded, and two percent was covered by water.

Changes in Developed Land and Residential Density

The following section discusses the regional distribution of land uses and changes in developed land area and residential density. For the purpose of this analysis, 'residential' includes all land used for residential purposes (including residential streets) plus parking associated with residential uses, and 'agricultural' includes parking associated with agricultural uses. Table 3 compares the percent of the region's total land area in each county to the percent of residential, other developed, agricultural, and undeveloped land uses. Table 4 describes changes in developed land between 2000 and 2010 and Table 5 summarizes changes in agricultural and undeveloped acres. Highlights include the following:

- The five southeastern Pennsylvania counties include 58 percent of the region's total acres but account for 66 percent of its agricultural acres (primarily in Chester and Bucks counties) and 68 percent of its developed land area. The four New Jersey counties, while including only 42 percent of the region's total land area, account for 57 percent of its vacant and wooded lands, primarily in the Pinelands region in Burlington County.
- Not surprisingly, 16 percent of the region's developed acres are located in the City of Philadelphia, which accounts for only four percent of the region's total land area.
- Development (and particularly residential development) slowed between 2005 and 2010 compared to the previous five years, which was not unexpected given the national and regional economic recession. Between 2005 and 2010, approximately 25,000 acres were developed region-wide, compared to almost 39,000 acres between 2000 and 2005. Residential acreage increased by approximately three percent between 2005 and 2010, compared to a five percent increase during the first half of the decade.
- Non-residential development was apparently impacted less by the recession. Over 45 percent of the decade's total increase in non-residential developed land occurred after 2005, compared to only 37 percent of residential development. This may be due (at least in part) to the longer lead time between financing, approvals, and construction of non-residential projects compared to residential development.
- Although the number of acres lost to development between 2005 and 2010 declined compared to the first half of the decade, population growth continued. The region gained over six additional residents per additional acre of residential land between 2005 and 2010, compared to less than five additional residents per acre between 2000 and 2005. While this reduction may in part be due to higher density development and redevelopment in the region's core cities and developed communities, it most likely reflects the impacts of the recession, as college graduates unable to find a job move back home and families put off buying and moving to a larger home. It may also reflect the impact of immigration (since immigrants often live with extended families).

Table 1: 2010 Land Use in Acres

County	Total Acres	Residential	Industrial	Transport./ Utilities	Commercial	Military/ Mining	Recreation / Comm. Services	Agriculture	Wooded	Vacant	Water

Nine-County DVRPC Region	**100%**	**100%**	**100%**	**100%**	**100%**

Source: Delaware Valley Regional Planning Commission, January 2013. For this analysis, "residential" includes all residential uses, parking associated with residential uses, and residential streets. "Other developed land" includes all uses except residential, residential parking, wooded, vacant or water. 'Agricultural' includes parking associated with agricultural uses.

- The amount of residential land developed per additional person has declined since 2005. Between 1990 and 2000, approximately three-tenths of an acre was developed with residential uses for every additional resident in the region, a rate that continued between 2000 and 2005. Between 2005 and 2010, however, the development rate declined to less than two-tenths of an acre per additional resident.

- Between 2000 and 2005, 95 percent of the acres lost to development were previously agricultural, as growth continued to sprawl outward into the suburbs. Between 2005 and 2010, the percentage dropped to 82 percent, with more development occurring on previously wooded or vacant land.

- The rate of development between 2000 and 2010 slowed to nearly half the rate experienced in the previous three decades. From 1970 to 1990, development occurred at a rate of approximately one acre per hour; between 1990 and 2000, the rate accelerated to one acre every 45 minutes. Between 2000 and 2010, approximately one acre of land was developed every 82 minutes.

- Although the region's population increased by approximately four percent between 2000 and 2010, the region's residential land area increased by over seven percent (over 45,000 acres).

- Between 2000 and 2010, the DVRPC region lost over 57,000 acres of agricultural land area and an additional 6,500 acres of other undeveloped areas, for a total loss of almost 64,000 undeveloped acres. This compares to a loss of over 90,000 acres between 1990 and 2000.

- Chester County, Pennsylvania, had both the highest absolute and highest percent increase in residential acres between 2000 and 2010. Bucks County had the second highest absolute increases, while Gloucester County realized the second highest percent increase.

Table 4: Changes in Developed Land, 2000-2010

Source: Delaware Valley Regional Planning Commission, January 2013. 'Agriculture' includes land in agricultural use, agricultural bogs, and parking associated with agricultural uses. Small differences (less than 0.1 percent) between the 2010 total area and the areas listed in earlier DVRPC reports are attributable to improvements in GIS capabilities Numbers may not add due to rounding.

Table 6 identifies municipalities that experienced the greatest absolute increases in developed land area between 2000 and 2010, and Table 7 identifies municipalities that experienced the largest percent increases during the decade. Municipalities with the greatest absolute increases include Upper Providence and Limerick townships in Montgomery County; Harrison and Woolwich townships in Gloucester County; and Hamilton Township in Mercer County, each of which gained over 1,000 developed acres.

Table 6: Municipalities with the Greatest Absolute Change in Developed Acres, 2000-2010

Table 8 summarizes changes in population, housing units, residential land area, and housing units per acre between 2000 and 2010, and Figure 3 illustrates the net housing units per residential acre in 2010. The number of acres in residential use increased by seven percent region-wide during the decade, compared to a population increase of only four percent and a six percent increase in the total number of housing units. As a result, the number of housing units per residential acre decreased by one percent. Appendix F provides more detailed data on residential density by municipality.

Table 8: Change in Population, Housing, Residential Land Area, and Residential Density, 2000-2010

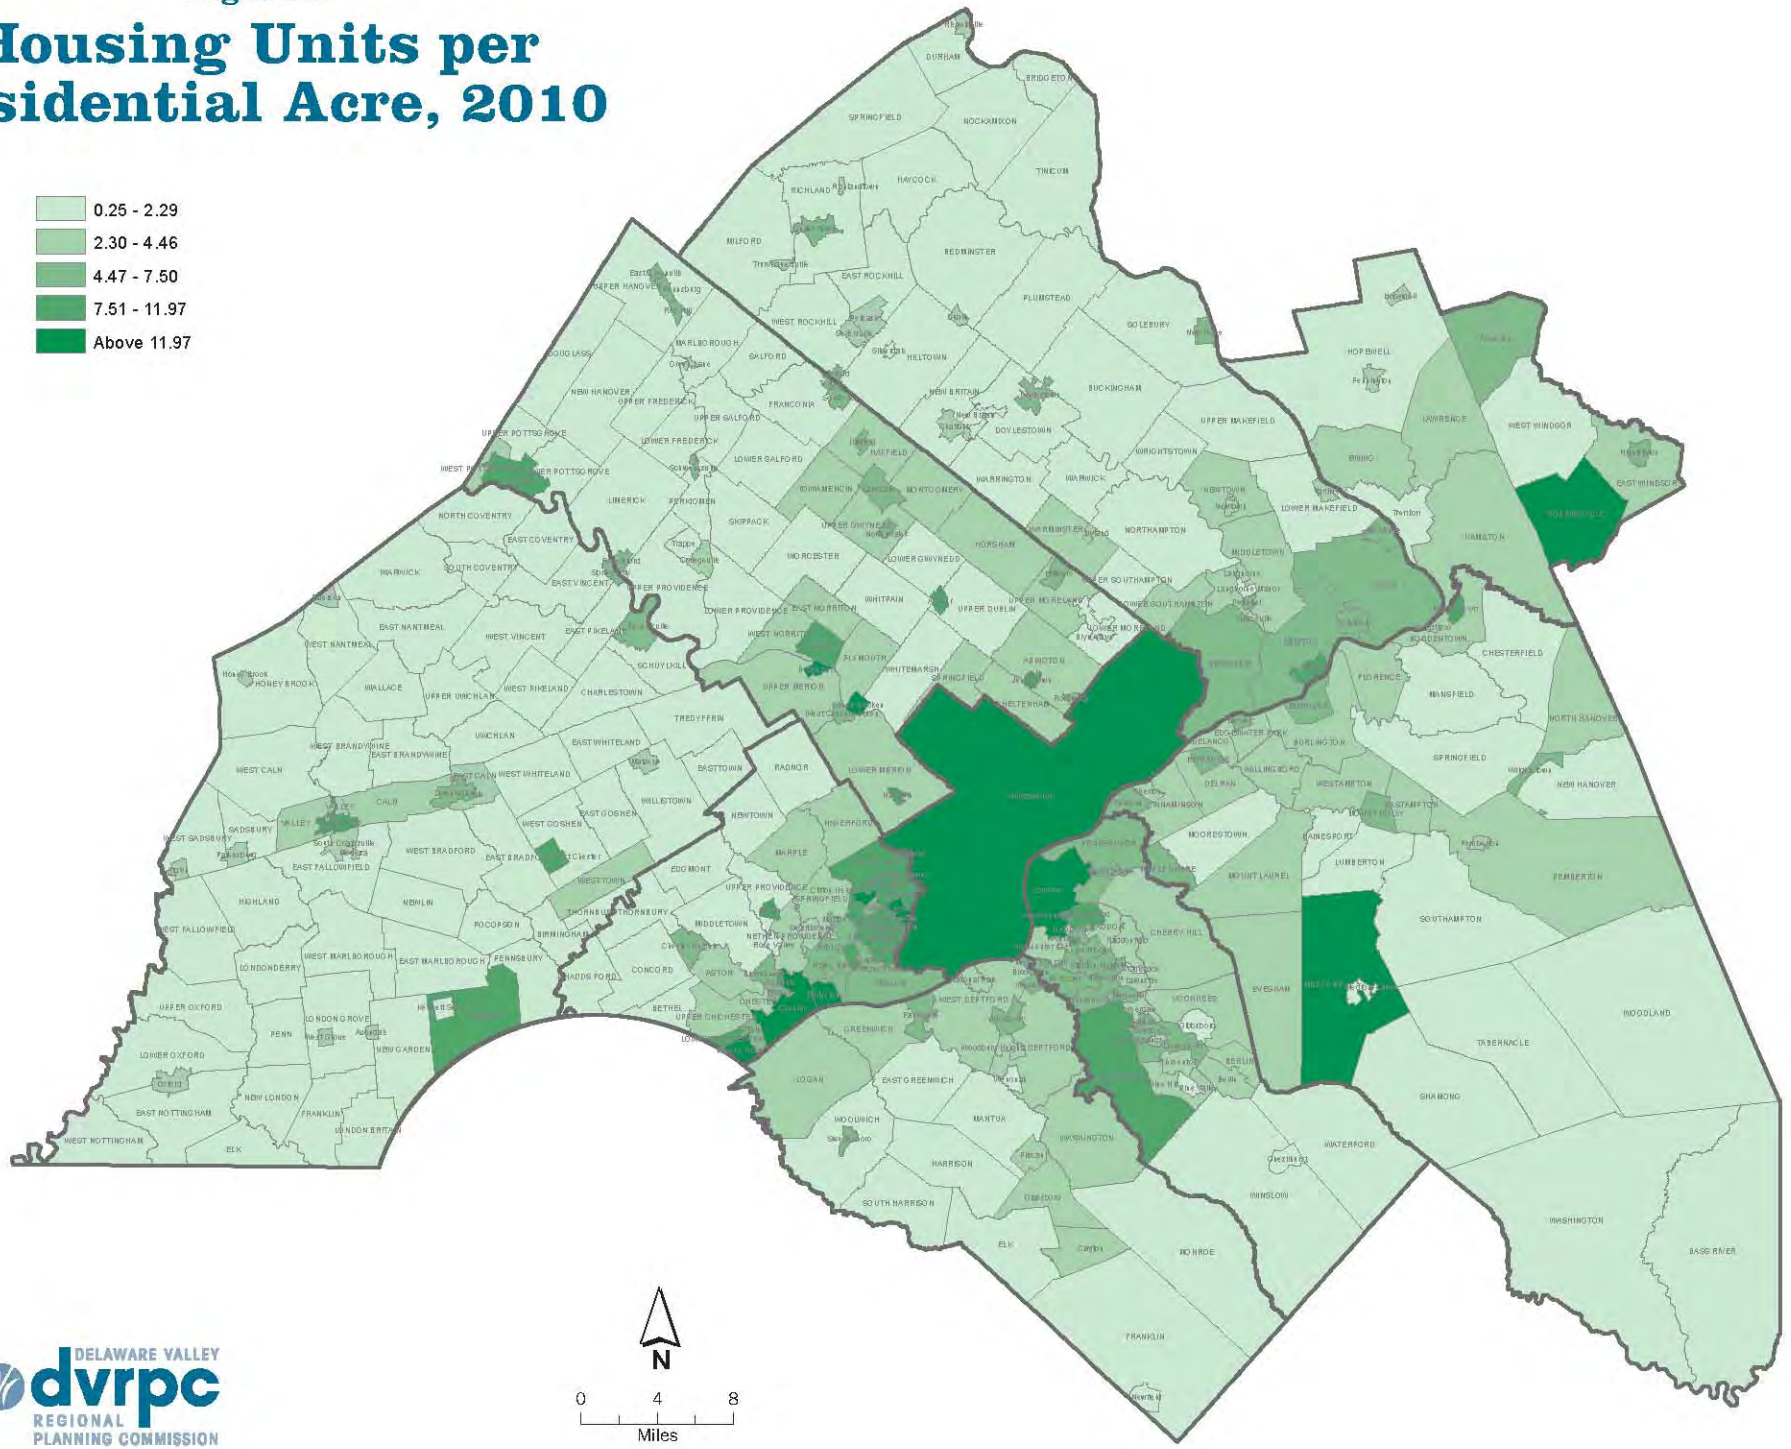
Source: Delaware Valley Regional Planning Commission, January 2013.For the purposes of this analysis, the 2000 and 2010 residential land area includes the 25 percent originally deducted from the residential land area to account for the local road network plus parking associated with residential uses.

Summary

This report has presented DVRPC's 2010 land use data and highlighted significant historical trends. This information will be used to inform the Commission's 2040 Long-Range Plan Update, scheduled for adoption in July 2013. The fact that the number of acres of agricultural and wooded land lost to development and land consumption per additional resident decreased in the latter half of the decade may reflect some progress made toward implementing the region's long-range goals of redevelopment in core cities and developed communities and recentralization of both population and employment. However, these trends may simply reflect the impacts of the economic recession. The Commission will continue to track trends in land use and development as the region progresses through and beyond its economic recovery.

Figure 3

Housing Units per Residential Acre, 2010



DELAWARE VALLEY dvrpc REGIONAL PLANNING COMMISSION

Appendix A: Land Use Categories

01000. Residential – Single-family detached: Single-family detached units, including their lots (where lot boundaries are evident). In cases where no lot boundaries are evident, the boundaries are estimated.

02000. Residential – Multi-family: Any multiple residential units, with the exceptions of row homes and mobile homes. Examples of multi-family units include duplexes, triplexes, apartments, and condominiums.

02009. Parking – Multi-family: Parking lots of 10 spaces or more associated with multi-family areas.

02010. Residential – Row home: A series of connected single-family homes forming a continuous row, usually located in an urban area. Condominiums are identified as multi-family, not as row homes.

02019. Parking – Row home: Parking lots of 10 spaces or more associated with row home areas.

02020. Residential – Mobile home: Areas containing a large identifiable group of transportable single-family dwellings.

02029. Parking – Mobile home: Parking lots of 10 spaces or more associated with mobile home areas.

03000. Manufacturing – Light industrial: Industrial parks and small-scale manufacturing and assembly. Light industrial uses are often "cleaner looking" than heavy industrial sites, and create less smoke, dust, and noise.

03009. Parking – Light industrial: Parking lots of 10 spaces or more associated with light industrial areas.

03010. Manufacturing – Heavy industrial: Heavier manufacturing uses, such as oil refineries, chemical plants, steel and metal fabrication, shipbuilding, grain elevators, port terminals, and manufacturing and assembly facilities (such as automobile production or pharmaceutical production).

03019. Parking – Heavy industrial: Parking lots of 10 spaces or more associated with heavy industrial areas.

04000. Transportation: All land devoted to rail, air, marine, and highway transportation. Examples include limited-access highways; ramps; railroad facilities (including switching yards, stations, and roundhouses); airports; and truck and bus terminals. On the land use maps, two-lane roads and residential streets are not identified as "Transportation," but are included within their primary land use. On the data tables, 25 percent of the residential land area in the suburban countries and 25

percent of all categories except military, mining, and water in Philadelphia was subtracted from its original category and shifted to transportation, to account for local roads. The transportation category takes precedence over any coexisting land use category (for example, highways over utility right-of-ways).

04009. Parking – Transportation: Parking lots of 10 spaces or more associated with transportation areas.

05000. Utility: Uses such as power generation and substations, major transmission lines and towers, water infiltration and storage tanks, wastewater treatment facilities, landfills, and recycling centers. Reservoirs are identified as "Water," not as "Utility." Transmission lines take precedence over certain coexisting land uses, including agriculture, vacant, and wooded.

05009. Parking – Utility: Parking lots of 10 spaces or more associated with utility areas.

06000. Commercial: Areas containing structures primarily used for the sale of products and services. Examples include central business districts, malls, strip malls, shopping centers, hotels and motels, and warehousing and distribution centers. All landscaped areas associated with commercial areas are also included in this category.

06009. Parking – Commercial: Parking lots of 10 spaces or more associated with commercial areas.

07000. Community services: Structures that provide noncommercial services. Examples include educational facilities (schools, but not the recreational fields associated with them); places of worship; cemeteries; hospitals and medical centers; museums; government centers (but not including military); correctional facilities; and social clubs. All landscaped areas associated with a community services land use are also included in this category.

07009. Parking – Community services: Parking lots of 10 spaces or more associated with community service areas.

08000. Military: Military installations, such as army bases and camps, armories, air bases, naval bases, air stations, and Coast Guard bases.

08009. Parking – Military: Parking lots of 10 spaces or more associated with military areas.

09000. Recreation: Areas developed for recreational activities. These include recreational parks and playgrounds (including those associated with schools), golf courses, picnic areas, camps, fairgrounds, recreational boat launches, swimming pools, theaters, stadiums, arenas, zoos, amusement parks, and non-military firing ranges.

09009. Parking – Recreation: Parking lots of 10 spaces or more associated with recreation areas.

10000. Agriculture: Land devoted to crops, pastures, orchards, tree farms, and other agricultural uses. Also included are nurseries, greenhouses, sod farms, horse farms, and cattle, pig, or dairy

farms. The farmstead and associated buildings are included in this category. Large transmission lines that clearly continue through and agricultural area are categorized as utility, which takes precedence over agriculture.

10009. Parking – Agriculture: Parking lots of 10 spaces or more associated with agricultural areas.

10010. Agricultural bog: Bogs associated with cranberry farms, located primarily in southern Burlington County. Farmland surrounding these bogs is categorized as agriculture.

11000. Mining: Mining includes any extractive use, principally quarries and sand pits.

11009. Parking – Mining: Parking lots of 10 spaces or more associated with mining areas.

12000. Wooded: Areas of contiguous canopy or solid tree cover, woodlands, and natural lands. Hedgerows (windrows) and wooded areas associated with residences are not interpreted as wooded. Large transmission lines that clearly continue through a wooded area are categorized as utility, which takes precedence over wooded.

12010. Vacant: Areas that are not clearly wooded, agricultural, developed, landscaped, cleared, or unused but are clearly tied to other uses. Large transmission lines that clearly continue through a vacant area are categorized as utility, which takes precedence over vacant.

13000. Water: Water areas include rivers, canals, streams, lakes, reservoirs, and ponds that have two definable boundaries. Single-line hydrology is not defined as water. When coexisting with another land use other than transportation, the water use takes precedence.

***Note:** On January 1, 2013, Princeton Borough and Princeton Township in Mercer County officially merged and became one single municipality known simply as "Princeton".

Source: Delaware Valley Regional Planning Commission, January 2013. For comparison purposes, all parking uses have been included in the transportation category (regardless of the use with which they are associated). Twenty-five percent of all residential land in every county except Philadelphia has been subtracted from the residential land area and added to transportation to account for local roads. In Philadelphia, 25 percent has been subtracted from all classifications, except military, mining, and water, and added to transportation to account for the increased density of the local road network. Small differences (less than 0.1 percent) between the 2010 total area and the areas listed in earlier DVRPC reports are attributable to improvements in GIS capabilities.

Appendix D: Land Use in Square Miles, 2010

Appendix D: Land Use in the Delaware Valley in Square Miles, 2010

***Note:** On January 1, 2013, Princeton Borough and Princeton Township in Mercer County officially merged and became one single municipality known simply as "Princeton".

Source: Delaware Valley Regional Planning Commission, January 2013. For comparison purposes, all parking uses have been included in the transportation category (regardless of the use with which they are associated). Twenty-five percent of all residential land in every county except Philadelphia has been subtracted from the residential land area and added to transportation to account for local roads. In Philadelphia, 25 percent has been subtracted from all classifications, except military, mining, and water, and added to transportation to account for the increased density of the local road network. Small differences (less than 0.1 percent) between the 2010 total area and the areas listed in earlier DVRPC reports are attributable to improvements in GIS capabilities.

Appendix E: Land Use by Percent, 2010

Appendix E: Land Use in the Delaware Valley by Percent, 2010

***Note:** On January 1, 2013, Princeton Borough and Princeton Township in Mercer County officially merged and became one single municipality known simply as "Princeton".

Source: Delaware Valley Regional Planning Commission, January 2013. For comparison purposes, all parking uses have been included in the transportation category (regardless of the use with which they are associated). Twenty-five percent of all residential land in every county except Philadelphia has been subtracted from the residential land area and added to transportation to account for local roads. In Philadelphia, 25 percent has been subtracted from all classifications, except military, mining, and water, and added to transportation to account for the increased density of the local road network. Small differences (less than 0.1 percent) between the 2010 total area and the areas listed in earlier DVRPC reports are attributable to improvements in GIS capabilities.
