DELAWARE VALLEY REGIONAL PLANNING COMMISSION

This report, prepared by the Transportation Planning Division of the Delaware Valley Regional Planning Commission, was financed in part by the Federal Highway Administration and the Pennsylvania Department of Transportation. The authors, however, are solely responsible for its finding and conclusions, which may not represent the official views or policies of the funding agencies.

Created in 1965, the Delaware Valley Regional Planning Commission (DVRPC) is an interstate, intercounty and intercity agency which provides continuing, comprehensive and coordinated planning for the orderly growth and development of the Delaware Valley region. The region includes Bucks, Chester, Delaware, and Montgomery counties as well as the City of Philadelphia in Pennsylvania and Burlington, Camden, Gloucester, and Mercer counties in New Jersey. The Commission is an advisory agency which divides its planning and service functions among the Office of the Executive Director, the Office of Public Affairs, and four line Divisions: Transportation Planning, Regional Information Services Center, Regional Planning, and the Office of Administration and Finance. DVRPC's mission for the 1990s is to emphasize technical assistance and services and to conduct high priority studies for member state and local governments, while determining and meeting the needs of the private sector.

The DVRPC logo is adapted from the official seal of the Commission and is designed as a stylized image of the Delaware Valley. The outer ring symbolizes the region as a whole while the diagonal bar signifies the Delaware River flowing through it. The two adjoining crescents represent the Commonwealth of Pennsylvania and the State of New Jersey. The logo combines these elements to depict the areas served by DVRPC.

ABSTRACT

This technical memorandum documents the activities undertaken in Task 1 of the Institutional Coordination of Intelligent Transportation Systems (ITS) in the Delaware Valley Study. The purpose of the overall study is to develop a plan for ITS deployment in the Philadelphia metropolitan area. The ITS deployment plan will be the framework used to develop the regional ITS architecture. This document presents the methodology and findings of surveys designed to identify the current and potential ITS stakeholders, to document the existing flows of information among stakeholders, to identify missing links and new opportunities for communication among stakeholders and to assess the level of interest of the stakeholders in becoming active participants in developing procedures and agreements for the sharing of traffic and travel information.

Appendix A: Regional Organization Survey Responses	A-1
Appendix B: Municipal Survey Responses	A-2

SURVEY HIGHLIGHTS AND FINDINGS

- ☐ The response rate for the regional organization survey was 84 percent.
 - ☐ The response rate for the municipal survey was 65 percent.
 - ☐ There was a high willingness among the respondents to become active members of a working group to establish coordination procedures with PennDOT for sharing transportation or travel related information; 88 percent of the regional organizations and 84 percent of the municipalities.
 - ☐ There is a significant disparity between the municipal responses and the regional organization responses concerning the sending and receiving of information about congestion, incidents, special events or construction activities. Almost half of the regional organizations send/receive this type of information to/from PennDOT's traffic operation center. However, only 10 percent of the responding municipalities send this type of information to PennDOT's traffic operation center while 25 percent of the responding municipalities receive this type of information from PennDOT's traffic operation center. The municipalities indicated that they are more likely to send and receive this information to/from the PA State Police.
 - ☐ Although the regional organizations are currently sharing transportation and travel information, this sharing is very fragmented. Currently, this region has no centralized institution which serves to receive and disseminate information about congestion, incidents, special events or construction activities.
 - ☐ Typically, there is very little sharing of transportation or travel related
-

information among the municipalities.

- ☐ Commercial radio and telephone calls are currently the primary methods of monitoring travel conditions for both the municipalities and regional organizations.
 - ☐ I-95, the Schuylkill Expressway, the Blue Route and the PA Turnpike are considered the most important expressways to the municipalities and regional organizations in terms of getting information about operating conditions.

INTRODUCTION

This technical memorandum documents the activities undertaken in Task 1 of the Institutional Coordination of Intelligent Transportation Systems (ITS) in the Delaware Valley Study. The purpose of this study is to develop a plan for ITS deployment in the Philadelphia metropolitan area. The ITS deployment plan will be the framework used to develop the regional ITS architecture. The ITS Plan, as envisioned, will combine electronic components (closed circuit TV, variable message signs, highway advisory radio, etc.) with institutional coordination (improving the flow of information concerning traffic and travel conditions) as part of PennDOT's initiative to reduce congestion and improve traffic flow. To do this, the overall project employs a three tier approach. First, at the regional level, a Technical Task Force was established to assist identify users of the transportation system and operating agencies who need to know about travel conditions and incidents; identify information flows between agencies; define agency coordination procedures and recommend methods to improve communication among agencies. Second, the project will establish a prototype incident management task force along a freeway corridor for the purpose of improving communication and cooperation among local agencies who must respond to incidents. Third, a Coordinating Council will be established for the purpose of developing policy and setting priorities at the executive level.

The primary objectives of Task 1-Agency Interface are to begin to identify the current and potential stakeholders, to document the existing flows of information among stakeholders, to identify missing links and new opportunities for communication and to assess the level of interest of the stakeholders in becoming active participants in developing institutional coordination procedures and agreements with PennDOT for the sharing of traffic and travel information.

To accomplish the objectives of Task 1, a questionnaire was developed and distributed to over 100 organizations identified as current or potential stakeholders in the ITS arena. Two versions of the questionnaire were prepared. One version was directed towards regional type organizations located within the DVRPC region which have jurisdiction over regional facilities or provide services to a broad range of this region. Many of these regional organizations are currently involved in some type of ITS activities. These activities constitute the building blocks of the regional ITS picture. The second version of the questionnaire was distributed to each of the municipalities within the Pennsylvania side of the DVRPC region which are crossed by an expressway. This version was modified to reflect issues that pertain more to individual municipalities than to regional organizations. The methodology and conclusions of each survey follow.

PHASE I: REGIONAL ORGANIZATION SURVEYS

Methodology

Survey

One of the primary objectives of the deployment plan is to strengthen the ties between ITS stakeholders and to provide the most efficient and effective flows of information about traffic and travel conditions. Many organizations currently involved in ITS have worked hard to create these information flows, however new organizations and new technologies continue to enter the picture creating missing links and new opportunities for coordination. A survey was developed with the intent of assessing the needs or capabilities of these regional organizations in terms of collecting, receiving or sharing traffic or travel related information and their current/planned level of involvement in ITS activities. The survey questions were designed to address five main themes: 1) What type of transportation/travel related data do they collect, 2) How do they monitor travel conditions in the region, 3) With whom do they share this information, 4) How is this data shared, and 5) Are they interested in participating with PennDOT and other organizations to establish procedures for sharing transportation/travel related information. A copy of the regional organization survey form is reproduced in Table 1.

Development of Mailing List

A mailing list for this survey was developed by DVRPC to identify regional agencies or organizations within the Delaware Valley that play a role in providing transportation services, traveler information or responding to incidents and accidents. The organizations that are represented include transportation agencies for both highways and transit, police, fire and emergency management departments, traffic reporting services, and goods movement organizations. The original contact mailing list is presented in Table 2.

After the list was prepared, it was reviewed and approved by the study's Status Committee which is made up of PennDOT, FHWA and DVRPC staff. Every effort was made to identify the appropriate staff person at each organization to complete the questionnaire. Each organization on the list was sent a cover letter and a copy of the questionnaire. The letter introduced the study and requested the organization's participation by answering the questionnaire.

Interview Procedures

All interviews were conducted by phone after the questionnaires were mailed to the organizations. In order to manage the interview process, half of the questionnaires were mailed out on June 5, 1998, with the balance mailed on June 18, 1998. By having two mailings, it eliminated the possibility that the survey would sit on someone's desk for an extended period of time before they were contacted by DVRPC staff.

After each mailing, phone calls were placed within a week to set up a specific date and time when the individual would be available to complete a telephone interview. Usually several phone calls had to be made in order to make contact and/or to establish who the appropriate person should be to complete the survey. In some cases, additional copies of the questionnaire also had to be faxed to the appropriate individual prior to the interview. The entire process generally took about 3 weeks to complete each batch of surveys.

Survey Response

Table 3 identifies which of the regional organizations completed the survey, the date that the questionnaire was mailed out, the date the interview was conducted and whether or not the organization was willing to participate with PennDOT to establish institutional coordination procedures for the sharing of travel information. Questionnaires were mailed to fifty-five individuals from various organizations in Pennsylvania, New Jersey and Delaware. Several of the individuals represented different divisions of the same organization. Some of these agencies completed one combined survey, therefore the total number of potential responses was reduced to 49. Of those 49, DVRPC was able to obtain 41 completed surveys for a response rate of approximately 84 percent. The name of the actual respondent along with their title and phone number can be found on the individual response forms located in Appendix A.

Regional Organization Survey Summary

A database was developed to compile the results of the survey responses in an accessible format. Responses to the individual questions were summarized and are presented in Table 4. Selected questions are summarized and presented below.

Question 1: Services - Of the 41 responses, the following is a breakdown of the number of organizations providing the following services:

- 12 Operate and maintain highway facilities
- 9 Operate public transportation services
- 10 Operate local and regional traffic management system
- 19 Provide traveler information
- 1 Dispatch freight or commercial fleets
- 20 Respond to incidents on the expressways

The organizations surveyed represented a very diverse group providing a variety of services. A little over one-third of the organizations indicated that they provided more than one of the services identified. Almost half the respondents respond to incidents on the expressways and a little less than half provide traveler information. Almost 30 percent of the respondents operate and maintain highway facilities while just over one-fifth provide public transit services.

Question 2: Interest in operating conditions - Of the 41 responses, the following is a breakdown of the number of organizations interested in the operating conditions of the following roadways:

A.) Pennsylvania:

- | | | | |
|----|----------------------------------|----|-----------------------------------|
| 33 | I-95 | 27 | I-76 |
| 21 | PA Turnpike (I-76/I-276/I-476) | 23 | I-676 |
| 22 | I-476 (Blue Route) | 23 | US 1 (Media Bypass/Roosevelt Exp) |
| 15 | PA 63 | 21 | US 202 |
| 15 | US 30 (Coatesville/Exton Bypass) | 18 | US 422 |
| 16 | US 309 | | |

B.) Other States:

- | | | | |
|----|--------------------------|----|----------------------|
| 21 | NJ Turnpike | 14 | Delaware Turnpike |
| 11 | Atlantic City Expressway | 21 | I-95 (Delaware) |
| 25 | Delaware River Bridges | 15 | Other NJ Expressways |
| 17 | I-495 | | |

The survey results show that I-95 is of critical importance to the region; 80 percent of the respondents indicated an interest in receiving information on operating conditions on that facility. Two-thirds of the respondents expressed interest in

information on the Schuylkill Expressway. The Delaware River Bridges, the Blue Route, the Vine Expressway and US 1 also generated considerable interest.

Question 4: Monitor conditions - Of the 41 responses, the following is a breakdown of how organizations currently monitor or determine if there is an accident, incident, special event, or construction activities on the area's expressways:

26	Commercial Radio	9	Two-way Radio	9	Direct CCTV
25	Telephone Call-In	19	Patrol Vehicles	3	Electronic Bulletin Board
19	Fax	14	I-95 IEN*	15	SmarTraveler (PennDOT)
8	E-Mail	16	Newspaper	12	Travel Smart (DVRPC)
11	TRANSCOM	23	PennDOT TOC	15	NJ DOT TOC South

* I-95 Information Exchange Network

Listening to commercial radio and receiving phone calls are the most common ways of monitoring travel conditions on the area's expressways. PennDOT's Traffic Operations Center was cited by more than half of the respondents as a means of monitoring this information. Nine (22%) organizations indicated that they use closed circuit TV surveillance to monitor various roadways.

Question 5: Collection of transportation-related information - The most common answer for each part of the question was that the organizations collected no transportation-related information concerning congestion, incidents, special events or construction/maintenance projects. For those organizations that did collect transportation information on congestion, incidents or events, the most common responses were information on location, duration and detour routes.

Question 6: Dissemination of transportation-related information to the general public - The most common answer for each part of the question was that the organizations provided no transportation-related information concerning congestion, incidents, special events or construction/maintenance projects to the general public. For the few organizations that did provide transportation information, the most common responses were information on location.

Question 8: Dissemination of transportation-related information to other agencies- The most common answer for each part of the question was that whatever transportation-related information that the organizations collected they are typically willing to share with other agencies.

Question 10: Information exchange (send information to) - Of the 41 responses, the following is a breakdown of which organizations the respondents send accident, incident, special event, or construction activity information to:

17	PennDOT TOC	13	NJ DOT TOC South	9	PA Turnpike
7	NJ Turnpike	10	PA State Police	9	NJ State Police
12	Philadelphia Police	13	TRANSCOM	11	Traffic Reporting Services
13	SEPTA	11	NJ Transit	8	PATCO
9	I-95 IEN	11	DRPA	7	Travel Smart (DVRPC)
13	Newspapers	12	SmarTraveler (PennDOT)		

Although PennDOT's Traffic Operations Center was the most common organization that the respondents shared accident, incident, special event, or construction activity information with, only about 40 percent of the respondents did so. Less than 30 percent shared this type of information with SmarTraveler.

Question 11: Information exchange (receive information from) - Of the 41 responses, the following is a breakdown of which organizations the respondents receive accident, incident, special event, or construction activity information from:

20	PennDOT TOC	16	NJ DOT TOC South	14	PA Turnpike
9	NJ Turnpike	9	PA State Police	9	NJ State Police
11	Philadelphia Police	13	TRANSCOM	9	Traffic Reporting Services
16	SEPTA	9	NJ Transit	5	PATCO
12	I-95 IEN	12	DRPA	13	Travel Smart (DVRPC)
14	Newspapers	11	SmarTraveler (PennDOT)		

Approximately half of the respondents received travel information from PennDOT's Traffic Operations Center while only about one-quarter utilize SmarTraveler for this type of information.

Question 12: Type of information needed - Most organizations indicated that they needed information on the location and duration of congestion, incidents or special events and a few others felt that lane closures and detours were needed.

Question 14: Operational help - Most organizations indicated that this information would help their operations by allowing them to provide better and more accurate information to the public and other sections of their own organization. They also indicated that it would help in allocating resources and rerouting traffic.

Question 15: Information technology - Of the 41 responses, the following is a breakdown of the current or near term capabilities of each organization to receive transportation information:

41	Telephone	17	Commercial Radio	27	E-Mail
41	Fax	21	Two-Way Radio	14	Video (from CCTV)
23	Pager	4	Static Map Display	9	Electronic Bulletin Board
3	Dynamic Map Display				

As expected, all respondents utilize telephone and fax to receive transportation information. However, it is encouraging to see the level of E-mail and pager use. The popularity of closed circuit TV cameras is evident in the fact that over one-third of the respondents indicated their use. These respondents were overwhelmingly operators of highway/transit systems or information service providers.

Question 16: Barriers to sharing information with other organizations - The consensus among the organizations is that they are not aware of any barriers that would prevent them from sending or receiving transportation-related information to/from other entities.

Question 20: Restrictions on conveying this information to the public - The majority of the organizations indicated that there are no restrictions that would prevent them from conveying transportation-related information to the public. However, a couple organizations raised concerns over staffing an information dissemination effort. A toll authority expressed concerns about conveying information that would encourage rerouting traffic around a toll plaza.

Question 22: Continued participation - This question assesses the interest level of the organizations to become an active member of a working group to establish coordination procedures with PennDOT for information sharing. Of the organizations that responded, 36 (88%) indicated a willingness to continue to participate in this effort. The most notable organizations that were not willing to join a working group included Delaware County Emergency Communications and Montgomery County Emergency Preparedness.

PHASE II: MUNICIPAL SURVEYS

Methodology

Survey

The intent of the municipal survey was to assess the needs or capabilities of those municipalities which are crossed by an expressway in terms of their ability to collect, receive or share traffic or travel related information, their current/planned level of involvement in ITS activities and their involvement in responding to incidents on the expressway network. The regional organization survey was modified so that the questions as well as the answer choices were more appropriate for a municipality. As with the regional organization survey, the questions were designed to address five main themes: 1) What type (if any) of transportation/travel related data do they collect, 2) How do they monitor travel conditions on the expressways 3) With whom do they share information, 4) How is information shared, and 5) Are they interested in participating with PennDOT and other organizations to establish procedures for sharing transportation/travel related information. A copy of the survey is provided in Table 5.

Development of Mailing List

A mailing list for this survey was developed by DVRPC by identifying all the municipalities in the Pennsylvania portion of the region that are crossed by an expressway. Each municipality, whether it is the police, fire or public works department, may potentially be responsible for maintaining transportation services, providing traveler information, or responding to incidents and accidents occurring on the expressways. Table 6 lists the municipalities which were included and the expressways which cross them. Figure 1 presents this information graphically. The resulting mailing list of forty-eight municipalities is presented in Table 7. The City of Philadelphia was not included in this municipal survey because of the extensive scope of activities and breadth of services it provides. However, this does not mean that the City was excluded from this process. Several different departments and offices within the City's structure were surveyed as part of the regional organization survey. These are listed individually in Table 3.

After the list was prepared, it was reviewed and approved by the study's Status Committee. A cover letter and a copy of the questionnaire were directed to the manager or secretary of each municipality. The letter introduced the study and requested that the organization participate by answering the questionnaire.

Interview Procedures

In order to manage the interview process, half the questionnaires were mailed out on May 1, 1998, with the balance mailed on May 14, 1998.

After each mailing, telephone calls were placed within a week to set up a specific date and time when the individual would be available to complete the phone interview. Usually several phone calls had to be made in order to make contact and/or to establish who the appropriate person should be to complete the survey. In many cases, the manager referred the questionnaire to the local police department who has the responsibility of responding to traffic incidents. In some cases, additional copies of the questionnaire also had to be faxed to the appropriate individual prior to the interview. The entire process generally took about 3 weeks to complete each survey.

Survey Response

Table 8 identifies the participating municipalities, the date the questionnaire was mailed out, and the date of the completed interview. Out of the 48 municipalities identified as possible stakeholders, 31 participated in the survey. The name of the actual respondent along with their title and phone number can be found on the individual responses located in Appendix B.

Municipal Survey Summary

A database was developed to compile the results of the survey responses in an accessible format. Responses to the individual questions were summarized and are presented in Table 9. Selected questions are summarized and presented below.

Question 1: Services - Of the 31 responding municipalities, the following indicates which services they provide:

- 5 Provide traveler information
- 20 Respond to incidents on the expressways

Approximately two-thirds of the municipalities which answered the survey indicated that they respond to incidents on the expressways.

Question 2: Interest in operating conditions - Of the 31 responses, the following is a breakdown of the number of municipalities interested in the operating conditions of the following roadways:

7	I-95	10	I-76
14	PA Turnpike (I-76/I-276/I-476)	3	I-676
16	I-476 (Blue Route)	8	US 1 (Media Bypass/Roosevelt Exp)
0	PA 63	12	US 202
8	US 30 (Coatesville/Exton Bypass)	7	US 422
3	US 309	2	Delaware River Bridges

About half of the municipalities indicated an interest in receiving information on operating conditions on the Blue Route and on the PA Turnpike. The Schuylkill Expressway and US 202 also generated interest from the municipalities.

Question 4: Collection of transportation-related information - The overwhelming majority of municipalities indicated that they collected no transportation-related information concerning congestion, incidents, special events or construction/maintenance projects.

Question 5: Detour routes - Of the 31 responses, the following is a breakdown of the number of municipalities which have indicated their development of detour routes:

2	Official routes	10	Unofficial routes	19	No pre-arranged detours
---	-----------------	----	-------------------	----	-------------------------

Many of the municipalities indicated that they had not developed any prearranged detour routes as a precaution to handle incidents on the expressways. Those municipalities that had identified detour routes overwhelmingly indicated that they were of an informal nature.

Question 7: Information exchange (type of information) - When asked about the type of transportation related information the municipalities provide to other entities or the general public, the common answer was none. However, a couple indicated that they notified the radio traffic reporting services of the locations of incidents.

Question 9: Information exchange (send information to) - Of the 31 responses, the following is a breakdown of which organizations the respondents send accident, incident, special event, or construction activity information to:

3	PennDOT TOC	0	NJ DOT TOC South	2	PA Turnpike
0	NJ Turnpike	11	PA State Police	0	NJ State Police
2	Philadelphia Police	0	TRANSCOM	6	Traffic Reporting Services
3	SEPTA	0	NJ Transit	0	PATCO
0	I-95 IEN	0	DRPA	1	Travel Smart (DVRPC)
11	Newspapers	3	SmarTraveler (PennDOT)		

Although the PA State Police was the most common organization that the respondents shared accident, incident, special event, or construction activity information with, only about one-third of the respondents did so. Less than 10% shared this type of information with PennDOT's Traffic Operations Center or SmarTraveler. This question illustrates the lack of coordination on the local level.

Question 10: Information exchange (receive information from) - Of the 31 responses, the following is a breakdown of which organizations the respondents receive accident, incident, special event, or construction activity information from:

8	PennDOT TOC	0	NJ DOT TOC South	3	PA Turnpike
0	NJ Turnpike	13	PA State Police	0	NJ State Police
2	Philadelphia Police	0	TRANSCOM	4	Traffic Reporting Services
3	SEPTA	0	NJ Transit	0	PATCO
0	I-95 IEN	1	DRPA	1	Travel Smart (DVRPC)
2	Newspapers	2	SmarTraveler (PennDOT)		

The PA State Police appears to be the organization which works most closely with the municipalities. However, there are many untapped opportunities for sharing information at the municipal level. Municipalities have many organizations available to them in which to receive or send travel information but according to the responses to this survey those organizations are not being utilized.

Question 11: Information need - When asked about the type of information the municipalities need on major/minor incidents, general congestion or special events/construction/maintenance activities, they indicated a need for information on closures, detours, duration and location for incidents. They had no need for information concerning congestion, special events, construction or maintenance activities.

Question 14: Technology to receive information - Of the 31 responses, the following is a breakdown of the current or near term capabilities of each organization to receive transportation information:

31	Telephone	15	Commercial Radio	12	E-Mail
29	Fax	24	Two-Way Radio	4	Video (from CCTV)
12	Pager	2	Static Map Display	4	Electronic Bulletin Board
2	Dynamic Map Display				

As expected, all respondents utilize a telephone and most have a fax available to receive transportation information. However, other technologies such as E-mail, pager, CCTV and electronic bulletin boards are starting to be utilized to share information at the municipal level.

Question 15: Barriers - The consensus among the municipalities is that they are not aware of any barriers that would prevent them from sending or receiving transportation-related information to/from other entities.

Question 21: Continued participation - This question assesses the interest level of the municipalities to become an active member of a working group to establish coordination procedures with PennDOT for information sharing or to establish a corridor level incident management task force. Of the municipalities that responded, 26 (84%) indicated a willingness to continue to participate in this effort.
