

CHAPTER 6: PROJECT LISTINGS

HIGHWAY PROJECTS FOR THE
FY2017 TIP

DVRPC FY 2017-2020 TIP for PA

Pennsylvania - Highway Program (Status: TIP)

Bucks

MPMS# 12923 **Bristol Road Extension SR:2025**

LIMITS US 202 to Park Avenue

Est Let Date: 12/8/2022

IMPROVEMENT Roadway New Capacity

MRPID:119

MUNICIPALITIES: Chalfont Borough; New Britain Borough; New Britain Township

FC: 16

AQ Code:2035M

PLAN CENTER: Town Center

IPD: 1

PROJECT MANAGER: HNTB/N. Velaga

CMP: Major SOV Capacity

CMP Subcorridor(s): 8G, 12B

PennDOT Class: New Alignment

PennDOT Improvement: New Alignment

NHPP:

Provide a two lane extension of Bristol Road (approximately 2000 ft.) from US 202 to Park Avenue. When completed, this improvement will provide a two-lane bypass around Chalfont Borough which will eliminate trips on US 202 and turning movements at the US 202/PA 152 intersection. Project involves relocation of SEPTA siding track, a bridge across the wetlands, widen the intersection at Bristol road and US 202 to provide right and left turning lanes, provide maintenance of traffic during construction, redesign traffic signals and rail road crossing gates at US 202 and Bristol road extension and coordinate with SEPTA.

Project CMP (Congestion Management Process) commitments include sidewalks, signal and intersection improvements, turning movement enhancements, and coordination with SEPTA. See DVRPC's 2016-2017 memorandum on supplemental strategies for details related to this project.

PROJECT MANAGER: TSS/T. Stevenson

CMP: Not SOV Capacity Adding

PennDOT Class:

PennDOT Improvement:

NHPP:

Clay Ridge Road over Rapp Creek (County Bridge #87) is a 55-foot long single lane two span concrete encased steel beam bridge built in 1917. The bridge is structurally deficient as a result of the poor condition of the deck, superstructure, pier and both abutments, resulting in traffic restrictions. Due to the advanced deterioration of all structural elements, the County intends to remove and replace the structure in a context sensitive manner.

TIP Program Years (\$ 000)

Final Version

Pennsylvania - Highway Program (Status: TIP)

Bucks

MPMS# 13240 *Old Bethlehem Road Bridge Over Kimples Creek SR:4101*

LIMITS Over Kimples Creek

Est Let Date: 2/15/2018

IMPROVEMENT Bridge Repair/Replacement

MUNICIPALITIES: Haycock Township

FC: 7

AQ Code:S19

PLAN CENTER:

IPD: 0

PROJECT MANAGER: Plans/C. Veiga

CMP: Not SOV Capacity Adding

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP: N

The project consists of replacing 16' wide weight restricted 13 ton posted bridge over Kimples Creek with a 28' wide bridge with two 11' lanes and 3' shoulders on new alignment. Due to the impacts on emergency services, a temporary roadway and bridge would be required and due to the impacts of the temporary facilities on the wetlands constructing the bridge on a new alignment is the most feasible alternative. As part of the project a wetlands mitigation site will be constructed to mitigate the impacts to the existing wetlands. The existing bridge is posted for 13 tons, shows signs of rapid deterioration, is only 1 lane wide, and has only 111 feet of stopping sight distance. Additionally the horizontal alignment of Old Bethlehem Road north and south of the bridge consists of a series of sharp horizontal curves with substandard sight distance and radii. There is evidence of utility poles being struck.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PROJECT MANAGER: TSS/GANNETT/S. New

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 14G

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

This project involves rehabilitating or replacing bridges as a three span reinforced concrete box beam bridge. The narrow two lane bridge with no shoulders will be replaced with a wider structure that provides one lane in each direction and a painted median. Improvements to an adjacent traffic signal at the intersection of Walnut Street and Constitution Avenue will also be included in the project. The current bridge has a sidewalk along the eastern side of Walnut Street. The proposed bridge will have sidewalks along both sides of the roadway. The addition of the sidewalk along the west side of the roadway will improve pedestrian access to Lenape Park. This sidewalk was requested by Perkasio Borough. Currently, any pedestrian accessing the park from south of Constitution Avenue has to cross Walnut Street at least once. The additional sidewalk will provide for a signal-controlled crossing. The bicycle and pedestrian checklists will be incorporated into the project.

A final alternative for bridge rehabilitation or replacement is determined upon National Environmental Policy Act (NEPA) clearance.

PennDOT Class: New Alignment

PennDOT Improvement: New Alignment

NHPP: Y

The interstate completion project will connect I-95 and I-276 in Pennsylvania; facilitate a revised routing of I-95 in PA and NJ, and make I-95 continuous along the east coast from Florida to Maine.

Stage 1 of the project involves the construction of the I-95 mainline flyovers of the interchange between I-95 and the PA Turnpike, a new mainline toll plaza west of this interchange, replacement of the existing Delaware River Bridge toll plaza with a cashless toll facility collecting in the westbound direction, and removal of the existing US13 interchange toll facility. This project is integral to the Delaware Valley Freight Corridors initiative. All Stage 1 project funding not covered by Contracts D10 (MPMS 95439) and D20 (MPMS 95444) is included below based on the latest program schedule. Additionally, some Stage 2 design funds are shown based upon the latest adopted PTC Capital Plan.

Stage 1 construction has been broken down into several contracts and expected completion is in 2018. Completed work includes the overhead bridges carrying Galloway Road, Richlieu Road and Bristol-Oxford Valley Roads over the Turnpike and Ford Road over I-95. Additional Stage 1 completed work includes the PA Turnpike's Northwest Quadrant Wetland Mitigation Site, the Plumbridge Greenway Stream Mitigation Site, and the advanced Intelligent Transportation System deployment. Current Stage 1 work includes construction of the new mainline toll plaza between Richlieu and Galloway Roads. The toll plaza will feature Express E-ZPass lanes which will allow motorists to pass through the plaza at highway speeds. Conventional toll booths will be provided in the outside lanes of the plaza for cash paying customers. This toll plaza phase will also include the construction of a cashless toll facility at the Delaware River Bridge in the westbound direction and the removal of the Route 13 Interchange toll plaza. The I-95 mainline flyover connections of the Interchange will be constructed so that I-95 can be redesignated onto the existing PA Turnpike to the NJ Turnpike. At that time, I-95 north of the Turnpike would be redesignated in PA and NJ as I-295. Signing, lighting and traffic operations work will be done in phases throughout the construction period in order to manage traffic during and after construction. Stage 1 will operate independently until future stages are completed. No additional through lanes are being constructed on I-95 as part of Stage 1. Funding noted below provides for Stage 1 improvements not captured by SR 0095 D10 (MPMS 95439) and D20 (MPMS 95444). Remaining Stage 1 work not already underway or completed includes the reconstruction of the ramp from the existing Delaware Valley Interchange toll plaza to Route 13 and includes a new at-grade signalized intersection with Route 13.

A future Stage 2 will include construction of the remaining six new interchange ramp movements which do not have the I-95 designation, and completion of the mainline widening from two lanes in each direction to three lanes in each direction in addition to the associated reconstruction work on the Turnpike and I-95. A future Stage 3 will include a new parallel bridge over the Delaware River. Commencement of construction for Stage 2 however is contingent upon the identification and programming of sufficient funding.

This is a partnership project of the Pennsylvania Turnpike Commission (PTC), PennDOT and FHWA. Use of toll credits was approved by PENNDOT in 2003. Stage 1 of the project is eligible for federal funds. The PTC is committed to advancement of the I-95 project to its completion utilizing a combination of funding sources; however, the PTC is not seeking any additional regionally allocated federal or state DVRPC TIP funds in order to complete the project. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users and drivers on the existing road network (operations). See DVRPC's 2009 annual memoranda on supplemental strategies for details related to project.

Also refer to MPMS 95439 and MPMS 95444 for this project.

PLAN CENTER:

IPD: 1

PROJECT MANAGER: TSS/H. Freed

CMP: Minor SOV Capacity

CMP Subcorridor(s): 14G

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP: Y

The project includes the replacement of 2 bridges: one carrying PA 663 over Unami Creek, and one carrying Allentown Road Bridge over Licking Creek. The replacement of the PA 663 Bridge over Unami Creek will be designed for sufficient width to accommodate staged traffic control during construction of the roadway widening. The structure will also be designed to be able to accommodate structural and hydraulic considerations for future widening to a five-lane section. This project also includes the widening of Allentown Road at the S.R. 0663 intersection to accommodate a two-lane section with a left turn lane on the southbound approach as well as the turning movement requirements for the WB-50 design vehicle with the minimum approach work possible. The northbound approach will be designed for a minimum two-lane section with the possibility of a left turn lane investigated; the replacement of the existing traffic signal equipment at the PA 663 intersection with Allentown Road and revisions to the traffic signal phasing and timing to improve operational inefficiencies, and the reconstruction of the existing pavement within the project limits.

All work on PA 663 and Allentown Road will be reduced in length from the original design to that which is necessary to meet required left turn lane and taper lengths and hydraulic considerations for the Unami Creek Bridge and Licking Creek Bridge. It is anticipated that approximately 2,420 feet of PA 663 and approximately 600 feet of Allentown Road will be reconstructed.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Improvement: Bridge Restoration

NHPP: Y

This is the design parent for a roadway reconstruction and widening and bridge improvement project that involves 5.3 miles of roadway, four (4) interchanges, ten (10) bridge structures and six (6) retaining walls. The project includes the addition of a third through travel lane in each direction between the Street Road interchange and the Pennel interchange (Business Route 1) and the addition, modification, or upgrading of auxiliary lanes in each direction for the S.R. 8017 (Street Road), S.R. 8019 (PA Turnpike), S.R. 8055 (Neshaminy/Rockhill Drive), and S.R. 8067 (Pennel/Business Route 1) interchanges. The project includes improvements at the Street Road, the PA Turnpike and the Neshaminy (Rockhill Drive) interchanges to coordinate with proposed development as well as the investigation into pedestrian walkways and transit stops along Rockhill Drive. Also included in the project are guide rail upgrades, drainage improvements, signage improvements, additional traffic signalization along with evaluation of existing signal timings, and noise wall evaluation throughout the project limits.

The proposed structure improvements include the replacement of eight (8) bridges, rehabilitation of one (1) bridge, the removal of one (1) bridge, the construction of six (6) retaining walls and the potential construction of two (2) noise walls. The bridges to be replaced are those which carry S.R. 0001 over S.R. 0132 (Street Road) (1B), I-0276 (the PA Turnpike) (9B), the PA Turnpike (Ramps I and J) (2B), S.R. 2044 (Rockhill Drive) (4B), Neshaminy Creek (5B), and Business Route 1 (6B) and the CSX and SEPTA rail lines. The bridge which carries S.R. 2025 (Bristol Road) over Route 1 (10B) and the bridge that carries West Interchange Road over S.R. 0001 (11B) are also to be replaced. The bridge that is to be removed (3B) currently carries S.R. 0001 (Route 1) over a closed private access road. The rehabilitated bridge carries S.R. 0001 over Highland Ave. (S.R. 2008).

See MPMS 93444, 93445, and 93446 for the construction sections.

The reconstruction and widening project minimizes impacts to the community by avoiding archaeological resources at Neshaminy Creek while improving safety and mobility. Additionally, this alternative avoids historic resources such as the Philadelphia Water Company, the Roosevelt Cemetery and the Railroad.

Project CMP (Congestion Management Process) commitments are currently under development.

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 4A, 5I

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP: N

The project consists of the replacement of the existing Hulmeville Avenue bridge. The bridge carries two lanes of traffic over three tracks of the former Reading Railroad that is now operated by CSX. The existing bridge is being replaced along the existing horizontal alignment and approximate vertical alignment with minimal approach work. The existing span arrangement will be maintained due to the location of the existing railroad facilities. It should be noted that this span arrangement may be revised during the detailed design phase due to discussions between CSX and SEPTA to provide four (4) tracks throughout the project area. An understanding between the parties is that any overhead bridge replacement must accommodate an additional track.

The substructure units will be comprised of reinforced concrete stub abutments with reinforced multi-column pier bents with crash walls. The replaced bridge will consist of a three-span continuous prestressed composite concrete adjacent box beams structure supporting a reinforced concrete deck. This structure type provides the minimum superstructure depth so that the required vertical clearance could be maintained without significant impacts to the profile of Hulmeville Avenue. The proposed typical section across the bridge consists of two 12-foot wide travel lanes with 4-foot wide shoulders on both sides flanked by concrete parapet walls with metal protective barrier mounted to the top of the parapets along the middle span. In light of PennDOT's policy of not providing sidewalks on bridges where there are no approach sidewalks, no sidewalks are proposed on the structure for pedestrian access. There will be 144 feet of approach roadway work on the north side including the intersection of Hulmeville Avenue with Comly Avenue and 264.6 feet on the south side of the structure to meet the existing pavement conditions. The 4-foot shoulder is maintained to meet the existing conditions in the southerly direction and extended fully to Comly Avenue north of the bridge. Guide rail is proposed at the approaches extending from the end of wingwalls to Comly Avenue on the north side and to the entrance way of the commercial establishments at the southern quadrants.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PLAN CENTER:

IPD: 0

PROJECT MANAGER: Plans/C. Veiga

CMP: Not SOV Capacity Adding

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP: N

This project involves removing and replacing the existing bridge that carries Upper Ridge Road over Unami Creek in Milford Township. The bridge will be reconstructed along the existing alignment. Providing a modern structure is essential for emergency services, as well as for meeting potential future demand.

A new structure is needed to address existing deficiencies. The substandard bridge width (of 22.8 ft.) is functionally obsolete- the proposed structure has a bridge width of 32 ft. The existing bridge has a 100-year design storm elevation above the roadway surface. The existing Upper Ridge Road (S.R. 4033) bridge is structurally deficient and deteriorating. Atop the bridge deck, the asphalt wearing surface has moderate damage showing typical wide cracks. As of 2003 inspection the overall bridge rating is governed by the superstructure condition which is poor (4). The rolled steel I-beams are severely rusted with advanced section loss up to the full height of the web in the shear zone and to the flanges at mid-span with up to 1 inch rotation of interior beams. The concrete bridge seat presents severe scaling that undermines the bearing of two beams. Scour damage is also present at the structure abutments. The stone masonry abutment stems have wide full height cracks.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Bridge Restoration

PennDOT Improvement: Bridge Restoration

NHPP: N

This project involves rehabilitating or replacing the Headquarters Road Bridge over Tincum Creek in Tincum Township, Bucks County. This bridge is structurally deficient, functionally obsolete, and currently closed to traffic due to its deteriorated condition. The bridge is a contributing resource to the Ridge Valley Rural Historic District which is listed in the National Register of Historic Places. A final alternative for bridge rehabilitation or replacement is determined upon completion of the review process required by the National Environmental Policy Act (NEPA) and its supporting regulations.

Currently, there is a stop condition at either end of the bridge due to its narrow width. Traffic has been reduced to one lane. The existing structure is an 80' long, three-span concrete-encased steel stringer bridge with stone masonry abutments and piers over Tincum Creek. No utility conflicts are anticipated.

The proposed roadway widening project is an approximately a 2.3 mile section of SR 2025 (Bristol Road) and the typical section will include two 11-foot travel lanes, an 11-foot center left-turn lane and 2-foot shoulders. The proposed shoulder improvements will be full-depth installations. Resurfacing of the existing roadway is proposed throughout the project limits. Secondary roads access Bristol Road by way of both signalized and non-signalized intersections. Signalized intersections with Bristol Road include: Old Lincoln Highway, Grandview Avenue/Neshaminy Mall entrance, Galloway Road/Elfin Avenue, Third Avenue/Richlieu Road, Bensalem Boulevard and Pasqualone Boulevard. Reconstruction is proposed for each signal, including ADA ramps and pedestrian signals. Included in the intersection improvements are additional left and right turning lanes throughout the corridor consisting of left turn lanes at the intersections of Bristol Road at Old Lincoln Highway and Richlieu Road; right turn lanes at the intersections of Bristol Road at Old Lincoln Highway, Neshaminy Boulevard, Galloway Road and Richlieu Road. Land use along Bristol Road is primarily commercial and mixed residential. Additional improvements include the re-alignment of Bristol Road at the intersection of Third Avenue/Richlieu Road to improve the horizontal alignment of the segment for improved sight distance.

There are existing sidewalks within the project limits and will be replaced in-kind upon any impacts due to the widening. New sidewalks and ADA ramps are proposed along the corridor from Neshaminy Mall to Richlieu Road. As a result of the improvements to SR 2025, approximately 65 parcels will be affected by either required ROW takes and/or temporary easements throughout the limits of the project. Also, included under this project are several tracks of land identified to be deeded to PennDOT from Bensalem Township.

The project limits overlap a private development that is proposed along the Westside of Bristol Road directly across from Bensalem Boulevard. This work has been completed under an HOP contract by a private development entity.

IPD:

PROJECT MANAGER: CMP: Not SOV Capacity Adding

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP: N

The project involves the replacement of the existing Hellertown Road Bridge that carries two (2) lanes of traffic over Cooks Creek. The improvements will consist of a total bridge replacement with a single span pre-cast concrete arch culvert and minor approach roadway work. The replacement structure will be on the same alignment as the existing structure. The new structures will include two 11ft travel lanes with two 5 ft shoulders. In addition, a detour will be necessary during construction that will be approximately 7.4 mi long and will be implemented using all state owned roads.

The present structure built in 1919 is structurally deficient but does not have any posted weight restrictions. It was constructed as a one-span stone reinforced concrete rigid frame bridge with a span length of 11ft. The curb-to-curb roadway width for this bridge is 17.7 ft with no shoulders. The overall condition of the bridge is critical and scour is cited as the cause.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This is a 3R project from Kulp Road to PA 611 and is approximately 2.8 miles in length. The existing roadway consists of two 10' lanes and intermittent shoulders that vary from 2' to 12'. The proposed roadway will consist of milling and overlay and widening to provide two 11' lanes and 5' shoulders. A left turn lane southbound at Titus Ave. will be added. Existing sidewalk and curb is intermittent and will remain/replaced in-kind. One bridge will be replaced and will match the roadway cross section. This project will be coordinated with MPMS #64779.

Typical components of a "3R" project include base repair, milling, overlay, resurfacing, drainage improvements, signal modernization, and guiderail improvements. The intent of a "3R" project is to make improvements necessary to bring the road up to current standards.

The purpose of the project is to improve the functionality and safety of the intersection, as well as relieve some traffic concerns due to the heavy truck traffic in the area. This project involves the reconfiguration of the Second Street Pike/Swamp Road intersection, the addition of left turn lanes at all approaches, upgrade the intersection to be signalized, and the addition of an auxiliary passing lane that extends 800 feet north along SR 0232. Additionally, there is a 540 foot taper to bring the road safely back to one lane.

CON (\$3,501,000 estimate) will be drawn from MPMS #57927 at the appropriate time.

PennDOT Class: Congestion Reduction

PennDOT Improvement: Congestion Reduction

NHPP: Y

The closed-loop traffic signal system will comprise fifteen existing signalized intersections and one proposed signalized intersection along the SR0309 corridor and adjacent streets within the Township and Borough. The project will also include vehicle and pedestrian LED signal indications, emergency vehicle pre-emption, vehicle loop detection, underground conduit and junction boxes, and controller cabinets will be replaced and/or installed at each intersection. Existing signal poles and mast arms that do not meet structural loading requirements will also be replaced. Each controller will be interconnected by aerial fiber-optic cable mounted on utility poles completed under the District's Intelligent Transportation System (ITS) initiatives. In addition, timing changes will be made to accommodate the traffic conditions and master controllers will manage the system from within the Township Building or Quakertown Borough Building for the respective intersections under their jurisdiction.

The 15 Intersections include:

- West End Boulevard (SR0309) and Tollgate Road (SR4049)
- West End Boulevard (SR0309) and Franklin Lane/Station Road
- West End Boulevard (SR0309) and Richland Mall Driveway
- West End Boulevard (SR0309) and Trumbauersville Road (SR4051)
- West End Boulevard (SR0309) and Park Avenue
- West End Boulevard (SR0309) and John Fries Highway (SR0663)/West Broad Street (SR313)
- West End Boulevard (SR0309) and Trainer's Corner Access/Quakertown Plaza Access
- West End Boulevard (SR0309) and Richland Crossing Access
- West End Boulevard (SR0309) and West Pumping Station Road
- Main Street and Park Avenue
- John Fries Highway (SR0663) and Hickory Drive/Trainer's Corner Access
- Main Street and West Broad Street (SR313)
- Main Street and Mill Street
- California Road and Pumping Station Road

PROJECT MANAGER: George Dunheimer ADE CONSTR **CMP:** Minor SOV Capacity **CMP Subcorridor(s):** 5I, 12A
PennDOT Class: Congestion Reduction **PennDOT Improvement:** Congestion Reduction **NHPP:** Y

The project consists of the interconnection of a total of ten (10) intersections (nine existing, one proposed) along Bustleton Pike (S.R. 0532) and Bridgetown Pike (S.R. 0213) to relieve congestion and improve traffic flow through the project corridor. In conjunction with the signal interconnection two intersections warrant the construction of additional lanes in order to further relieve congestion. The first is to widen the westbound direction of Bridgetown Pike (S.R. 0213) at Buck Road/Jay Street to provide a shared thru/right turn lane in addition to the existing thru lane. The second is to add a right turn lane with sidewalk to the northbound direction of Bristol Road (S.R. 2025) at its intersection with Bridgetown Pike (S.R. 0213). Additional improvements consist of adding a shared through-right turn lane at the intersection of Bridgetown Pike & Buck Road. This auxiliary lane will be added to the intersection along the southbound direction of Bridgetown Pike. Bridgetown Pike is a 2-lane arterial from Old Bristol Road to Buck Road. However, it is a 4-lane arterial from Buck Road to County Line Road. Currently, vehicles use a long, striped shoulder at this location to make either a right turn onto Buck Road or to continue westbound thru the intersection onto Bustleton Pike using the rightmost existing receiving lane. This project will delineate this lane as a designated thru-right turn lane and lengthen the lane from 75'-0" to approximately 150'-0". Curbing and drainage modifications are proposed along eastbound Bridgetown Pike as part of the widening. In addition a dedicated right-turn lane will be added on northbound direction of Bristol Road at the intersection of Bristol Road and Bridgetown Pike. This approach to the existing T-intersection currently has only one approach lane; therefore right and left turns queue in this single lane. By adding an additional right-turn lane on this approach, more green time can be allocated to the traffic on Bridgetown Pike, thereby improving the flow of traffic on all the approaches of this intersection. Curbing and drainage improvements are proposed along westbound Bristol Road as part of the widening. The eastbound pavement on Bridgetown Pike and the northbound pavement on Bristol Pike will be milled and overlaid along the length of widening.

PennDOT Class: Additional Lanes

PennDOT Improvement: Additional Lanes

NHPP: Y

This project includes the widening of S.R. 2038 (County Line Road) from 2 lanes to 5 lanes with 5' shoulders between Stump Road and Lower State/Kulp Road in Horsham, Warrington and Montgomery Townships. The project length is approximately 1.50 miles. The posted speed limit for the project area is 45 MPH and the design speed is 50 MPH. The project also includes intersection improvements to the Lower State Road/S.R. 0152 (Limekiln Pike)/S.R. 2038 intersection and the addition of sidewalks. This section of S.R. 2038 has experienced increased traffic congestion throughout the years. The congestion is expected to worsen due to the ongoing emergence of residential and commercial properties in the area. This project will also eliminate multiple substandard vertical curves along S.R. 2038 which contribute to safety concerns at the intersection with Lower State Road and S.R. 0152. The project may include the construction of two noise barriers and will include 61 partial right of way takes. There are no anticipated residential or commercial relocations as a result of this project. This project will be coordinated with MPMS #50634 and #57623.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2008 annual memoranda on supplemental strategies for details related to this project.

PLAN CENTER:

IPD: 0

PROJECT MANAGER: EE/J. Arena

CMP: Not SOV Capacity Adding

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP: N

This project involves the rehabilitation of a single span concrete non-composite adjacent box beam bridge carrying S.R. 2036 (Swamp Road) over an unnamed tributary to Neshaminy Creek in Newton Township, Bucks County, PA. The bridge is located between the entrance to the Nob Hill Residential Development and the western entrance to the Bucks County Community College. The Historic Temora Farm Property is located on the north side of the bridge and roadway and the Tyler Run State Park is on the south side. Stone retaining walls extend east and west of the existing bridge along the northern side of the roadway. A driveway is located northeast of the bridge providing access to the Temora Farm. A small structure integral with the walls along the roadway carries this driveway over a branch of the creek.

The superstructure of the existing bridge was replaced with a non-composite superstructure under an emergency contract in 2007. The existing bridge has a single 28 foot span and a clear roadway width of 23.5 feet.

This proposed project will rehabilitate the existing non-composite bridge superstructure with the installation of composite bridge deck maintaining the existing 23.5 clear roadway width. The existing stone masonry walls northwest and northeast of the bridge will be replaced. The Temora Farm driveway drainage structure will be replaced in conjunction with the wall replacement.

The goal of this project is to complete the work described above with as minimal disturbance to the surrounding area as possible. In order to achieve this goal, the horizontal and vertical alignment of the bridge will be maintained. Roadway reconstruction will be limited to immediate roadway within the limits of the approach to rehabilitated bridge deck and to new walls and driveway drainage structure. Guide rail, signing, and pavement markings will be updated as well. During construction, traffic will be maintained utilizing a detour.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

NHPP: N

The purpose of this project is to replace the existing structurally deficient and functionally obsolete bridge. This replacement bridge project is located on River Road (SR 32, Sec 520) between Cafferty Road and Ferry Road on the border of Plumstead and Tinicum Townships, Bucks County, Pennsylvania. The project surrounding area is moderately rural and wooded. It is occupied by residential dwelling within the well-preserved 19th and early 20th century village of Point Pleasant. The arch bridge is a contributing resource in the National Register listed Point Pleasant Historic District. This bridge was built in 1919. The proposed pre-cast concrete arch bridge will complement the existing structure. Also, a temporary crossing will be built on the upstream side of the existing bridge to accommodate one lane of traffic during construction. Total approach roadway work is limited to approximately 200 feet.

A final alternative for bridge rehabilitation or replacement is determined upon National Environmental Policy Act (NEPA) clearance.

NHPP:

This project provides a component of the East Coach Greenway and will provide for safe, direct trail passage on the towpath. A 12' x 140' tunnel is to be placed under the CSX spur line to accommodate an 8' wide multi-use trail with 8' vertical clearance by a Structural Steel Tunnel Liner Plate System, linking to the existing towpath trail on either side of the Railroad.

This project is part of The Circuit. The Circuit is a 750-mile interconnected network of multi-use trails spanning Greater Philadelphia with Philadelphia and Camden as its hub, and is included in DVRPC's Long-Range Transportation Plan. Circuit trails will generally meet minimum design standards (10-foot wide, paved, and separated from traffic) to reflect their intended use as the arteries of a dedicated regional non-motorized transportation system. Circuit trails located near and connecting to downtown Philadelphia are already used heavily for transportation purposes, and the implementation of the network will further encourage the surging growth of bicycle commuting in the region. At 2.3%, Philadelphia has the highest bike-to-work percentage of the 10 largest cities in the country according the 2013 American Community Survey.

PROJECT MANAGER: HNTB/N. Velaga

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 4A

PennDOT Class: Air Quality

PennDOT Improvement: Air Quality

NHPP:

The proposed structure will be a single span pre-stressed concrete adjacent box beam bridge for the Aqueduct and a pre-stressed concrete adjacent box beam bridge for the Tow Path.

The existing Delaware Canal Aqueduct and Tow Path Bridge are located over Brock Creek in Delaware Canal State Park, Yardley Borough. The Delaware Canal runs in a northwest to southwest direction through Yardley, almost parallel to Main Street. The Aqueduct is just northwest of the crossing of S.R. 332/Afton Avenue and carries the Delaware Canal over Brock Creek. At the project location, the Delaware River flows parallel to the Delaware Canal approximately 1000 feet northeast of the site.

The existing Aqueduct is a single span reinforced concrete u-slab, having a 24-inch depth, with reinforced concrete abutments and wingwalls. The existing tow path bridge is a single span reinforced concrete arch located on the same substructure as the aqueduct, although it appears to have been constructed at different times. Both of the structures have a clear span of 27.3' and are located on a skew of approximately 61° to Brock Creek. The structures of interest are located in a very flood prone location. It is believed that the low under clearance and short span of the existing aqueduct coupled with debris further reducing the hydraulic opening is the primary reason for flooding.

NHPP: Y

Funds in FY17 are for Accrued Unbilled Costs (AUC).

This structurally deficient bridge was constructed in 1967 and was rehabilitated in 1996. The bridge extends approximately 2000 feet to the north and 1500 feet to the south of the PA 213 overpass in Middletown Township. US 1 is a limited access freeway with two lanes in each direction. The proposed project includes reconstructing the bridge, reconstructing and reprofiling US 1 in the vicinity of Maple Avenue to improve the vertical clearance at the overpass, increasing the acceleration and deceleration lengths of the four US 1/Maple Avenue ramps, adjusting the traffic signal at the two signalized intersections at the US 1 interchange ramps with Maple Avenue, and adding a short stacking lane along the US 1 northbound exit ramp. US 1 is a limited access freeway facility and therefore does not permit bicycle/pedestrians use of this facility. No bicycle/pedestrian facilities will be incorporated along PA 213.

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

This project will provide for the rehabilitation or replacement of the River Road Bridge over the Delaware Canal in Tincum Township, Bucks County, a Decade of Investment bridge (DOI #2067). The River Road Bridge is structurally deficient and based on the most recent inspection in November 2016 its condition continues to deteriorate. As a result of this inspection, the bridge's posted weight was lowered to 15 tons and repairs were made to abutments and guide rail barrier.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PROJECT MANAGER: Gannett/B. Rasiul

CMP: Minor SOV Capacity

PennDOT Class: Safety Improvement

PennDOT Improvement: Safety Improvement

NHPP: N

This project will construct multiple pedestrian and roadway improvements along Durham Rd. (S.R. 0413), Stoopville Rd. (S.R. 2028), Eagle Rd. (a township road), Washington Crossing Rd. (S.R. 0532), and Highland Rd. (a township road) from the Stoopville Rd./Durham Rd. (S.R. 0413) intersection to the village of Dolington along Washington Crossing Rd. (S.R. 0532). Proposed improvements include:

- (1) Traffic control and gateway signs and painting of stop bars along Washington Crossing Rd. from the Washington Crossing Rd./Dolington Rd. intersection to village of Dolington;
- (2) 6' wide pedestrian walking path along the north side of Stoopville Road from east of Rosefield Drive to Eagleton Farms Road/Hemlock Drive; along the south side of Stoopville Road from Eagleton Farms Road/ Hemlock Drive to Eagle Road; continuing along the west side of Eagle Road to Marigold Drive; along the north side of Stoopville Road from Creamery Road to the intersection of Stoopville Road/ Washington Crossing Road; and continuing along the north side of Washington Crossing Road to Highland Road will be completed; the pedestrian walkway will require the extension of an existing pipe culvert beneath Stoopville Rd. between Highland Rd. and Creamery Rd. to allow the walking path to cross over the tributary;
- (3) Decorative crosswalks and ADA-compliant curb ramps at 3 intersections: (1) Eagleton Farms Rd./Stoopville Rd.; (2) Stoopville Rd./Washington Crossing Rd.; and (3) Highland Rd./Washington Crossing Rd.;
- (4) New traffic signal and widening at the Durham Rd./Stoopville Rd. intersection to provide a left turn lane at the Durham Rd./Stoopville Rd. intersection for vehicles traveling on southbound Durham Rd. to eastbound Stoopville Rd.;
- (5) Modification to the existing signal at the Highland Rd./Washington Crossing Rd. intersection to accommodate a right-turn lane on Highland Rd. and improvements that will provide for both left and right turn lanes for vehicles travelling southbound on Highland Rd. to Washington Crossing Rd.;
- (6) Relocation of utility poles.

The first phase (S.R. 2028, Section ECF) was constructed in June 2010 (see MPMS #84096). This project has \$269,000 earmark funds remaining from a 2008 Appropriations Bill (PA ID #710).

PLAN CENTER: IPD: 2

PROJECT MANAGER: TSS/P. Berthold **CMP:** Major SOV Capacity CMP Subcorridor(s): 4A, 5I

PennDOT Class: Highway Reconstruction **PennDOT Improvement:** Highway Reconstruction **NHPP:** Y

The S.R. 0001 Group 03S Section RC1 project, located in Bensalem Township, Bucks County, PA, extends from the S.R. 2037 (Old Lincoln Highway) signalized intersection just north of the Philadelphia/Bucks County line to just south of the Neshaminy interchange, a distance of 1.3 miles. The project encompasses reconstruction and widening of S.R. 0001, including: upgrading of 2 interchanges S.R. 8017 (Street Road) and S.R. 8019 (The PA Turnpike); reconstruction of 4 bridges; and removal of 1 bridge. The improvements for this section of S.R. 0001 are as follows:

- Widening of S.R. 0001 median width to meet current design criteria.
- Raising the S.R. 0001 profile from south of the Street Road interchange to north of the Neshaminy interchange to improve vertical clearances for the S.R. 0001 structures over S.R. 0132 (Street Road), I-0276 (PA Turnpike) and the PA Turnpike Ramps I & J.
- Adding a third travel lane along S.R. 0001 in each direction from the Street Road interchange to north of the PA Turnpike Interchange
- Adding a northbound right-turn lane along S.R. 0001 from the S.R. 2037 (Old Lincoln Highway) intersection north to the Street Road interchange.
- Reconfiguring the Street Road interchange to remove the four (4) traffic movements (ramps) between westbound Street Road and S.R. 0001 northbound and southbound from the northern side of Street Road and adding the movements to the southern side. Removing these movements from the north side of the interchange eliminates access and egress points along S.R. 0001, allowing longer weave lengths between the Street Road interchange and the PA Turnpike interchange. Reconfiguring the interchange includes improvements to the existing ramp geometry and the addition of a ramp in the southwestern quadrant. Traffic signals will be added on Street Road at each of the two (2) proposed ramp intersections. The existing signal timings will be evaluated.
- Adding an auxiliary lane along S.R. 0001 in both the northbound and southbound directions between the Street Road interchange and the PA Turnpike interchange.
- Increasing the existing loop ramp radius to improve design speed to 30 mph and incorporating a second lane on the S.R. 0001 northbound exit ramp to the PA Turnpike at the PA Turnpike interchange.
- Adding an auxiliary lane along S.R. 0001 in both the northbound and southbound directions between the PA Turnpike interchange and Neshaminy interchange.
- Removing the existing Limited Access on Street Road within the S.R. 0001 interchange. Entrances directly accessing S.R. 0001 through the Street Road interchange will be eliminated by relocating the driveways allowing entrances access from Street Road.
- Structure improvements include the replacement of four (4) existing bridges, the removal of one (1) existing bridge, the construction of 1 retaining wall and the construction of 1 noise wall. The existing bridges to be replaced are those that carry S.R. 0001 over S.R. 0132 (Street Road), I-0276 (the PA Turnpike), and the PA Turnpike Ramps I & J. The S.R. 2025 (Bristol Road) bridge over S.R. 0001 will also be replaced. The existing bridge to be removed currently carries S.R. 0001 over a closed private access road located between the PA Turnpike and Neshaminy interchanges.
- This project will include upgrades to guiderail, drainage improvements and signage improvements.
- The reconstruction and widening project also minimizes impacts to the community by avoiding archaeological resources at Neshaminy Creek while improving safety and mobility. Additionally, this alternative avoids historic resources such as the Philadelphia Water Company and the Railroad.

Project CMP (Congestion Management Process) commitments include signal improvements, sidewalks and other improvements for pedestrians, investigation of new bus stops and enhanced bus services in consultation with SEPTA, safety improvements including increased speed enforcement, and outreach to employers to promote transportation demand management strategies. See DVRPC's 2013-2014 memorandum on supplemental strategies for details related to this project.

Design Parent is MPMS #13549. Route 1 Improvements Northern section RC2 is MPMS #93445. Route 1 Frontage section RC3 is MPMS #93446.

The S.R. 0001 Group 03S Section RC2 project, located in Bensalem and Middletown Townships, Bucks County, PA, extends from a point just south of the Neshaminy Interchange to just south of S.R. 2045 (Old Lincoln Highway), a distance of 1.5 miles. The project encompasses reconstruction and widening of S.R. 0001, including: upgrading 2 interchanges S.R. 8055 (Neshaminy) and S.R. 8067 (Penndel); and reconstruction of 3 bridges. The improvements for this section of S.R. 0001 are as follows:

- Widening of S.R. 0001 median width to meet current design criteria.
- Raising the S.R. 0001 profile from just south of the Neshaminy interchange to north of the Neshaminy interchange to improve vertical clearances for the S.R. 0001 structure over S.R. 2044 (Rockhill Drive).
- Adding a third travel lane along S.R. 0001 in each direction from just south of the Neshaminy interchange north to the Penndel interchange.
- Adding an auxiliary lane along S.R. 0001 in both the northbound and southbound directions between the PA Turnpike interchange and Neshaminy interchange.
- Reconfiguring the Neshaminy interchange to relocate the ramp from Rockhill Drive to S.R. 0001 northbound from the northeastern quadrant of the interchange to the southeastern quadrant as a loop ramp, eliminating the left turn movement immediately west of the existing Neshaminy Mall traffic signal. Improving the geometry of the interchange ramps, where feasible. Modification to both existing signalized intersections on Rockhill Drive to improve traffic flow into and out of the Neshaminy Mall and the Horizon Corporate Center.
- North of the Neshaminy interchange, adding/lengthening auxiliary (acceleration and deceleration) lanes along S.R. 0001 in both the northbound and southbound directions for ramps to and from Rockhill Drive.
- Structure improvements include the replacement of 3 existing bridges, the construction of 5 retaining walls and the possible construction of 1 noise wall. The existing bridges to be replaced are those that carry S.R. 0001 over Rockhill Drive, Neshaminy Creek, and Business Route 1 and the CSX and SEPTA rail lines.
- S.R. 0001 southbound will be realigned across Neshaminy Creek to allow traffic to be maintained on the existing bridge during construction of the proposed structure on new alignment. Traffic will be switched to the new S.R. 0001 southbound structure during demolition of the existing bridge and construction of the proposed S.R. 0001 northbound structure. Similarly, S.R. 0001 northbound will be realigned across the CSX/SEPTA Railroad and Business Route 1 to allow traffic to be maintained on the existing bridge during construction of a new S.R. 0001 northbound structure. Traffic will be switched to the new S.R. 0001 northbound structure during demolition of the existing bridge and construction of the proposed S.R. 0001 southbound structure.
- Pedestrian walkways and transit stops along Rockhill Drive will be investigated.
- This project will include upgrades to guiderail, drainage improvements and signage improvements.
- The reconstruction and widening project minimizes impacts to the community by avoiding archaeological resources at Neshaminy Creek while improving safety and mobility. Additionally, this project avoids historic resources such as the Philadelphia Water Company and the Railroad.

Project CMP (Congestion Management Process) commitments include signal improvements, sidewalks and other improvements for pedestrians, investigation of new bus stops and enhanced bus services in consultation with SEPTA, safety improvements including increased speed enforcement, and outreach to employers to promote transportation demand management strategies. PennDOT Improvement: Highway Reconstruction

NHPP: Y

The S.R. 0001 Group 03S Section RC3 project extends from the northern end of the S.R. 0001 bridge over the CSX railroad to approximately 700 feet north of the S.R. 0413 (PA 413/Pine Street) bridge over S.R. 0001, a distance of 2.5 miles. This project includes the 2.0 mile +/- segment of frontage (service) road corridor.

The S.R. 0001 Group 03S Section RC3 project includes Resurfacing, Restoration and Rehabilitation (3R) improvements to S.R. 0001 and the frontage roads, reconstruction of 1 bridge (West Interchange Road over S.R. 0001), and the rehabilitation of 1 bridge (S.R. 0001 over S.R. 2008). The primary proposed improvements for this section of S.R. 0001 are as follows:

- Widening of S.R. 0001 median width from 4' to 10' to meet current design criteria.
- Replacement of 12,100 ft. of existing double-face guide rail median barrier and 985 ft. of existing concrete median barrier with concrete glare screen.
- Removal of existing raised concrete islands separating the mainline S.R. 0001 travel lanes from the frontage road to be replaced with 12'-0" paved outside shoulders along the mainline travel lanes and concrete median barrier between the proposed mainline outside shoulder and the frontage road.
- Closing the existing intermediate crossovers between the mainline S.R. 0001 travel lanes and the frontage roads.
- Updating the overhead guide signage for the project corridor due to the revised frontage road access and for coordination with the S.R. 0001 Sec. RC1, RC2 and LHB projects.
- Relocating the existing ITS infrastructure, including conduit throughout the corridor and ITS CCTV camera assembly, communications cabinets and VD sensor assemblies that are supported by the affected overhead guide signs.
- Lengthening of the acceleration lanes from the frontage roads onto S.R. 0001 in the northbound and southbound directions to meet current design criteria.
- Relocating the existing roadway inlets along the existing double face median guide rail and existing raised concrete traffic islands to along the proposed concrete glare screen and proposed concrete median barrier.
- Structure improvements include the replacement of one existing functionally obsolete bridge (West Interchange Road over S.R. 0001) along the existing horizontal alignment and the rehabilitation of one bridge (S.R. 0001 over S.R. 2008) including superstructure replacement.

Design Parent is MPMS #13549

Route 1 Improvements Northern section RC2 is MPMS #93445

Route 1 Improvements Southern section RC1 is MPMS #93444

Project CMP (Congestion Management Process) commitments include signal improvements, sidewalks and other improvements for pedestrians, investigation of new bus stops and enhanced bus services in consultation with SEPTA, safety improvements including increased speed enforcement, and outreach to employers to promote transportation demand management strategies. See DVRPC's 2013-2014 memorandum on supplemental strategies for details related to this project.

PennDOT Improvement: Highway Reconstruction

NHPP: Y

The interstate completion project will connect I-95 and I-276 in Pennsylvania; facilitate a revised routing of I-95 in PA and NJ, and make I-95 continuous along the east coast from Florida to Maine.

Stage 1 of the project involves the construction of the I-95 mainline flyovers of the interchange between I-95 and the PA Turnpike, a new mainline toll plaza west of this interchange, replacement of the existing Delaware River Bridge toll plaza with a cashless toll facility collecting in the westbound direction, and removal of the existing US13 interchange toll facility. This project is integral to the Delaware Valley Freight Corridors initiative.

Stage 1 construction has been broken down into several contracts and expected completion is in 2018. This MPMS# 95439 is for contract D10. The I-95/Pennsylvania Turnpike Interchange Project Construction Contract D10 includes the widening and reconstruction of the mainline Pennsylvania Turnpike in Bristol Township, Bucks County, from a point approximately 600 feet west of the S. R. 0095 overpass (approximate I-276 Milepost 355.6 near Durham Road) to a point 500 feet west of the Delaware River Bridge Toll Plaza (approximate I-276 Milepost 358.0), piers for the I-95 flyover ramps, and the replacement of the Turnpike Mainline Bridges over Durham Road, Veterans Highway (PA 413) and Mill Creek.

Overall, Stage 1 work along the turnpike mainline includes full depth pavement reconstruction and overlay, pavement markings, signing, stormwater management facilities, erosion and sedimentation control measures, new bridges, bridge substructure units, sound walls, retaining walls, bridge rehabilitations, culvert extensions, sign structures, removal of existing bridges, bridge approach slabs, guiderail, sanitary sewer work, CCTV, highway lighting, stream mitigation, and drainage. The project also includes roadway improvements along S.R. 0413 from Segment 0101 Offset 1378 to Segment 0101 Offset 2603 and S.R. 2049 from Segment 0040 Offset 0000 to Segment 0040 Offset 1112. Work includes traffic signals, pavement reconstruction, concrete curb, design-build pedestrian ramps, guiderail, drainage facilities, utility relocation, and other miscellaneous construction.

This is a partnership project of the Pennsylvania Turnpike Commission (PTC), PennDOT and FHWA. Use of toll credits was approved by PENNDOT in 2003. Stage 1 of the project is eligible for federal funds. The PTC is committed to the advancement of the I-95 project to its completion utilizing a combination of funding sources; however, the PTC is not seeking any additional regionally allocated federal or state DVRPC TIP funds in order to complete the project. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users and drivers on the existing road network (operations). See DVRPC's 2009 annual memoranda on supplemental strategies for details related to this project.

Also refer to MPMS 13347 and MPMS 95444 for this project.

The interstate completion project will connect I-95 and I-276 in Pennsylvania; facilitate a revised routing of I-95 in PA and NJ, and make I-95 continuous along the east coast from Florida to Maine.

Stage 1 of the project involves the construction of the I-95 mainline flyovers of the interchange between I-95 and the PA Turnpike, a new mainline toll plaza west of this interchange, replacement of the existing Delaware River Bridge toll plaza with a cashless toll facility collecting in the westbound direction, and removal of the existing US13 interchange toll facility. This project is integral to the Delaware Valley Freight Corridors initiative.

Stage 1 construction has been broken down into several contracts and expected completion is in 2018. This MPMS# 95444 is for contract D20. The I-95/Pennsylvania Turnpike Interchange Project Construction Contract D20 in Bristol Township, Bucks County, includes the widening and reconstruction of approximately 0.7 miles of I-95 northbound and southbound between the Neshaminy Creek and the connection with I-276 (PA Turnpike). It includes the construction of new interchange connections with I-276 for both I-95 northbound and I-95 southbound. The project also includes the redesignation of proposed I-295 EB/WB (existing I-95 NB/SB) between the I-276 overpass and the Scudder Falls Bridge. Also, D20 includes the partial construction of a ramp connection to link I-276 EB to I-95 SB and a collector-distributor road located to the west of the existing I-276 overpass adjacent to proposed I-295 WB. Four ramps will also be partially reconstructed at the I-95 interchange with SR0413.

Overall, Stage 1 work along I-95 and the turnpike mainline includes full depth pavement reconstruction and overlay, pavement markings, signing, stormwater management facilities, erosion and sedimentation control measures, CD Road, new bridges, bridge substructure units, sound walls, retaining walls, bridge rehabilitations, culvert extensions, sign structures, removal of existing bridges, bridge approach slabs, guiderail, sanitary sewer work, CCTV, highway lighting, stream mitigation, and drainage.

This is a partnership project of the Pennsylvania Turnpike Commission (PTC), PennDOT and FHWA. Use of toll credits was approved by PENNDOT in 2003. Stage 1 of the project is eligible for federal funds. The PTC is committed to the advancement of the I-95 project to its completion utilizing a combination of funding sources; however, the PTC is not seeking any additional regionally allocated federal or state DVRPC TIP funds in order to complete the project. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users and drivers on the existing road network (operations). This project entails three traffic signal improvements on Route 152 in central Bucks County. Improvements include: (1) the installation of Adaptive Signal Control Technology (ASCT) and Closed Circuit Television (CCTV) for two traffic signals within 100 yards of each other on North Main Street at the intersections of Sunset Avenue and Park Avenue; (2) installation of "Wavetronix" radar detection system for one traffic signal that can alleviate timing and idling issues at Lindenfield Parkway; and (3) adding pedestrian countdown signals for all three traffic signals.

This project was awarded \$230,400 CMAQ funds from DVRPC's 2011-2012 Competitive CMAQ Program on October 25, 2012.

PROJECT MANAGER: EE/DVRPC/K. Lawrence

CMP:

PennDOT Class: Transportation Enhancement **PennDOT Improvement:** Transportation Enhancement

NHPP:

Traffic flow improvements and pedestrian access improvements at the existing signalized intersection of Tamenend Avenue and SR 202 will reduce emissions by shortening diverted trips, by reducing delay for vehicles waiting to turn at the unsignalized driveway and by reducing congestion created by the one- way street. The pedestrian push buttons and crosswalks will increase opportunities for walking and bicycling trips to the train station from the nearby residential area and from SR 202. Funding will also provide the construction of an eight to ten feet (8-10') shared-use path for bicyclists and pedestrians between the Tamenend Avenue/SR 202 intersection and the New Britain SEPTA station, including modifications of the railroad crossing surface and equipment to safely accommodate the shared-use path crossing.

October 25, 2012 - This project received a 2011-2012 DVRPC competitive CMAQ award in the amount of \$169,600.

December 11, 2014 - In summer of 2014, PennDOT held a competitive round of 2-years worth of funding. As a result, this project was one of 13 projects across the DVRPC region that received \$150,000 on 11/10/2014 through the statewide TAP program (MPMS #60560) out of the \$7.8 million awarded to the region. Statewide, PennDOT made \$33 million available for 56 projects across the state.

This project funded by the Automated Red Light Enforcement (ARLE) Round 3 program will upgrade existing traffic signals from incandescent bulbs to LEDs at the following locations: Swamp Road (SR0313) at Ferry Road (SR1006), Swamp Road (SR0313) at Pine Run Road (T-401)/Saw Mill Road (T-391), Almshouse Road (SR 2089) at Barn Plaza/Doylestown Point Plaza, Easton Road (SR0611) at Doylestown Point/Neshaminy Manor Driveways, Easton Road (SR0611) at Barn Plaza Shopping Center/Bucks County Prison, Easton Road (SR0611) at Edison-Furlong Road (SR2079), East State Street (SR3002) at East Road (T-351), Easton Road (SR0611) at Swamp Road (SR0313)/Old Easton Road (T-403). As required by PennDOT, District 6-0 Traffic Unit the Traffic Signal Permit plans will be revised as necessary.

The Automated Red Light Enforcement (ARLE) program targets high crash intersections within the Commonwealth of Pennsylvania with the implementation of an automated system that records violations by drivers who run red lights and are fined for their violation. The projects assist municipalities to implement cost-effective upgrades to traffic lights and other basic systems that will improve safety, reduce congestion, and enhance mobility.

Round 3 (2012 ARLE funds) award: \$90,000. Round 3 of ARLE awarded approximately a total of \$4.7 million statewide.

This project will fund construction of a section of the Neshaminy Greenway Trail (NGT) from Lenape Lane to Upper State Road. The trail will be an ADA-compliant shared-use path and will complete a missing link in the NGT, providing a connection to the 202 Parkway Trail. The sections of the NGT to the south and west have been constructed, and the section of the NGT to the east is fully funded for design and construction. When completed, the NGT will create numerous non-motorized transportation connections to local destinations, including the Chalfont and New Britain SEPTA Train Stations.

This project is consistent with the Bucks County Park and Open Space and Greenways Plan (2011), the Tri-Municipal Trails Plan, the Doylestown Bike and Hike Plan/Map, and connects to the Bicycle PA Route S on the statewide bicycle touring system.

In the fall of 2015, PennDOT held a competitive round for statewide TAP funding. This project was one of 13 projects across the DVRPC region that was awarded funding in January 2017 through the statewide TAP program (MPMS #60560), receiving \$375,000 out of the \$9.4 million awarded to the region. This project also received \$1,225,000 of Regional TAP funds.

Flushing Road over Branch of Neshaminy Creek (County Bridge #282) is a 39-foot long single span steel Pratt Pony Truss structure built in 1948. It has substandard safety features on the bridge and at the bridge approaches. The bridge is structurally deficient as a result of the serious condition of the steel superstructure and poor condition of the masonry substructure. It is currently open to traffic with a posted limit of 12 tons and an exception for combinations of 21 tons. Due to the advanced deterioration of the superstructure and substructure, the County intends to complete a thorough rehabilitation of the bridge. Anticipated work includes repair/replacement of the open grid deck, stringers and floor beams, bridge seat and abutment backwall; repair/replacement of truss members and truss bearing as required; cleaning and painting all structural steel; installation of structure-mounted bridge railing; repair/repointing of stone masonry abutments/wings; installation of approach guiderail; scour protection measures; and repaving of approaches.

Creek Road over Little Neshaminy Creek (County Bridge #138), is a 31-foot long single span concrete encased steel beam structure built in 1937. It has substandard safety features on the bridge and at the bridge approaches. The bridge is structurally deficient as a result of the serious condition of the substructure. The bridge is currently open to traffic with a 12 ton load posting. Due to the advanced deterioration of the substructure, the County intends to remove and replace the structure in a context sensitive manner.

Falls Township is planning to upgrade and modernize the existing traffic signal located at the intersection of Mill Creek Parkway and Levittown Parkway. The Township has already completed all design work and PennDOT approved the new traffic signal permit plan on 9/17/2013. In general, the work will include a complete replacement and upgrade of the current traffic signal. New poles and mast arms will be installed to allow location of signal heads according to current standards. A new controller will be installed and will be programmed with updated timing. The new traffic signal will provide video detection in place of the current loop detectors. An emergency pre-emption system will be installed. Finally, the project will include new ADA curb ramps at each corner of the intersection, complete with pedestrian pushbuttons and signal heads.

PLAN CENTER: Suburban Center

IPD: 3

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Install a traffic adaptive system on Lincoln Hwy from I 95 ramp intersections to Oxford Valley Rd. The project will upgrade all the intersections in System I-76 and include the additional intersection of Lincoln Hwy and Oxford Valley Rd. Currently with the surrounding land uses (various retail developments, a large regional mall, and amusement/theme park) and nearby major highways (Interstate 95 and Route 1) the flow of traffic varies greatly, not only throughout the day, but seasonally throughout the year and static timing plans are unable to properly handle these various traffic flows. The basic coordination/retiming of the traffic signals on the Lincoln Highway corridor would not adequately address the needs associated with these traffic variations.

PennDOT Class:

PennDOT Improvement:

NHPP:

Implementation of needed repairs and maintenance at three intersections on West Lincoln Highway in Penndel, PA (a critical corridor) in an effort to enhance the safety of pedestrians and vehicular traffic through the borough. Traffic patterns, both vehicular and pedestrian, have been trending upwards along West Lincoln Highway in Penndel. The most obvious factors attributing to this include the frequency of passenger and commercial freight trains traveling through the Langhorne Train Station, higher population levels and increased commercial development in Lower Bucks County. The borough experiences extensive foot traffic culminating in the area where Bellevue and Durham intersect Lincoln Highway and continues north on both roads towards the Langhorne Train Station and Cairn University. Penndel Borough would like to address this through a multi-phase project which includes proper management and maintenance of these intersections as a first step followed by modernization, controller and pavement marking upgrades.

Grant money will be used to re-time the traffic signals along S. West End Boulevard (SR 0309) at W. Pumping Station Road and Tollgate Road to include protected left-turn phasing for both approaches of W. Pumping Station Road and Tollgate Road. The township has indicated that there is a safety concern at these intersections. Due to the high through volumes, left-turning motorists traveling east/west along both W. Pumping Station Road and Tollgate Road try to beat the light by moving prior to the green phase for their approaches. These motorists conflict with vehicles traveling north/south along SR 0309 that may be running through the intersection during the yellow and/or red phase of the signal.

NHPP:

This project will help fund construction of a multi-use trail connecting the Moland House, a significant historical site owned by Warwick Township, to Moland Park, a 50-acre township recreation area. The Moland Park multi-use trail will include a safe underpass beneath PA 263.

In the fall of 2015, PennDOT held a competitive round for statewide TAP funding. This project was one of 13 projects across the DVRPC region that was awarded funding in January 2017 through the statewide TAP program (MPMS #60560), receiving \$500,000 out of the \$9.4 million awarded to the region.

MUNICIPALITIES: Milford Township; Richland Township

FC:

AQ Code:X1

PLAN CENTER:

IPD:

PROJECT MANAGER: TSS

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

The purpose of the PA 663 Traffic Study is to evaluate transportation facility improvement needs in the PA 663 corridor in Milford and Richland Townships, Bucks County. PA 663 provides an important regional linkage connecting I-476 (PA Turnpike Northeast Extension) and PA 309 in the Quakertown area. PA 663 between I-476 and PA 309 is composed of highway segments of varying widths and lane configurations that have been constructed by both private and public funds. Significant private development is anticipated along the corridor, including the construction of a medical campus by St. Luke's Hospital at the intersection PA 663 and Portzer Road. The PA 663 Traffic Study will investigate anticipated traffic growth and identify estimated timeframes and costs as to when intersections and/or segments may need to be improved and/or possibly widened to provide for efficient traffic operations in the 3.5-mile corridor.

Bucks County Bridge #54 is a single span, concrete encased, steel I-beam bridge that is approximately 33 feet long. Originally built in 1912, it is currently weight-restricted to 7 tons. The bridge is structurally deficient as a result of the poor condition of the substructure, due to undermining of the near and far abutments. The bridge railing does not meet current standards and the approach guiderail also requires updating to current standards. Work to be performed includes the complete replacement of the bridge and associated approach improvements.

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

The existing bridge on West Bridge Street in the Borough of Parkesburg is structurally deficient and functionally obsolete. The structural deterioration advanced to the point that the bridge was no longer able to safely carry vehicular loads. The bridge was closed to traffic in 1994. In addition to the vehicular restriction, both sidewalks are restricted from use due to the severe deterioration of the wooden deck. The existing roadway width of 5.8 meters (19.0 ft) contains two travel lanes and no shoulders. This bridge will be replaced with a two lane bridge with minimal shoulders and sidewalks on both sides. The bicycle and pedestrian checklists have been incorporated into the project.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

Funds in FY17 are for Accrued Unbilled Costs (AUC).

Speakman No. 1 Covered Bridge over Buck Run will be rehabilitated to current PENNDOT load requirements. The location of the project is near the West Marlborough and East Fallowfield township line along Buck Run in Chester County, where Frog Hollow Road crosses over Buck Run. The rehabilitation of the bridge will include removing the steel piers and footings; five steel plate girders will replace the current floor beams and all the timber deck and running boards will be replaced with new treated lumber. In addition, the roof system and wingwalls will be replaced. The guide rail on the southeast corner of the bridge, removed for construction, will be replaced at the completion of the project

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PROJECT MANAGER: TSS/GANNETT/S. New **CMP:** Not SOV Capacity Adding

PennDOT Class: Bridge Restoration

PennDOT Improvement: Bridge Restoration

NHPP:

This project involves rehabilitating or replacing the Rudolph and Arthur Covered Bridge on Camp Bonsul Rd. over Big Elk Creek. Built in 1880, the bridge retains its original Burr arch truss construction and is listed on the National Register of Historic Places. The rehabilitation will strengthen the bridge for continued vehicular use and original timber trusses, decking, and boards will be re-used and restored in-kind where necessary to maintain the original appearance of the covered bridge. This Chester County owned bridge (#26) is structurally deficient and has sufficiency rating of 16.9. It is posted for 3 tons.

The project was selected to receive \$1.6 million in federal funds through the FY2009 National Historic Covered Bridge Preservation Program (NHCB).

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

IPD: 1

PROJECT MANAGER: TSS/GANNETT/S. New

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 7E

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

The proposed project involves the replacement of a 4-span steel girder bridge, with minimal shoulders, with a minor improvement to the vertical crest which spans over active AMTRAK, CSX and Norfolk Southern rail lines in East Caln Twp. & the Borough of Downingtown, Chester County, PA. The new bridge will be on the same alignment and includes approximately 600 ft. of approach roadway reconstruction to provide vertical clearances over railroad tracks.

The existing bridge has a load limit of 16 tons, except combination loading is 30 tons. The 25 ft. clear roadway width is too narrow for two vehicles, and the steel girders extending above the deck surface create a hazard. The structure was recently closed because sections of concrete were falling off the bridge. The superstructure and substructure both have a poor condition rating. The structure has a sufficiency rating of 52. In addition, the salt contamination of the concrete over the years from salting of the highways in the winter does not support rehabilitation of this structure.

This bridge is part of PA Bicycle Route "L." The bicycle and pedestrian checklists will be incorporated into the project.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This project provides for the existing 2-12' lanes and 10' shoulders to be reconfigured to 3- 11' lanes and 4' shoulders; the removal of inefficient jug handles and installation of dedicated left and right turn lanes; and storm water collection and management system, and sidewalk from Ship Road to Sharp Lane to connect with existing Uwchlan Trail System. An upgrade of traffic signals from Gordon Drive/Rutgers Drive to Shoen Road will include new supports, signal heads, actuation, emergency pre-emption and all electrical components. This project will retain the closed-loop system footprint between the intersections and the municipal building.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2011 annual memoranda on supplemental strategies for details related to this project. CMP Improvements in the form of the Lionville Park and Ride lot were completed in the initial phase of this project. ITS treatments for this section of roadway are complete and included in the US Route 202 ITS project, MPMS 64479, and contained in the PENNDOT Strategic Safety Plan.

This project serves as the preliminary design phase of a project to reconstruct approximately 14 miles of mainline pavement; potential addition of through lanes and operational improvements as required by traffic analysis for the eastern section; reconstruction and widening of the mainline shoulders; replacement and widening of mainline bridge superstructures; construction of new ramps (to complete partial interchanges at Airport Road); reconstruction, realignment, and lengthening of all on and off ramps (to provide storage length for traffic signals and ramp metering); reconstruction of arterial overpasses; installation of ITS elements (dynamic message signs, closed circuit television, incident detection, and ramp meters); and minor improvements to parallel arterial routes (to be determined) to improve safety, reduce congestion, and upgrade deteriorating infrastructure. This project is for preliminary design only; final design, utility, right of way, and construction phases are identified in MPMS #87781 (Eastern section) and MPMS #84884 (Western section; 2013 estimated cost is \$250 million). Additional study work will be undertaken under this MPMS # to determine the appropriate approach to address new capacity and operational needs of the eastern section, as well as the western section as needed. The full length of the corridor is located in West Sadsbury Township, Sadsbury Township, Valley Township, Coatesville City, West Caln Township, Caln Township, East Caln Township, and Downingtown Borough.

Earmarks--SAFETEA DEMO #3172, PA ID# 504 - \$4,005,000 remaining; PA ID #146- \$3,075,000 remaining.

The overall corridor construction cost estimate is \$630 million.

NHPP: Y

Improvements include construction to provide a consistent three (3) travel lane curbed section in each direction by roadway widening, replacing shoulders with full depth pavement, and revising pavement markings; upgrade five (5) existing signalized intersections with new equipment where needed and timing changes to accommodate the three (3) lane pattern; install an adaptive signal system and connect it to the Township Building; place overhead directional and regulatory signs and two DMS signs. Coordinate improvements with development HOPs; place concrete barrier near two buildings; modify existing drainage system with additional inlets and pipes; maintain traffic (at least two travel lanes) during construction; place islands at Orchard Avenue to prohibit left turn movements from side street. The project will complete an existing sidewalk on the southbound side from Schoolhouse Lane to the Shoppes at Longwood Village Shopping Center.

Project CMP (Congestion Management Process) commitments include strategies such as improvements to the existing road network (safety and operations). See DVRPC's 2009 annual memoranda on supplemental strategies for details related to this project.

This project will look to replace the existing bridge on North Valley Road (SR1005) over Amtrak/SEPTA (BMS # 15-1005-0080-1331 adjacent to the Paoli Train Station) with a new bridge across from the intersection of Lancaster Avenue and Darby Road. It is being planned as one element of the Paoli Intermodal Transportation Center, which would upgrade Chester County's most utilized train station which currently serves Amtrak, SEPTA's Paoli/Thorndale Regional Rail Line, as well as various bus routes.

See MPMS #60574 for transit components of the Paoli Transportation Center. The North Valley Road Bridge is functionally obsolete and has substandard vertical geometry.

A final alternative for the bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Improvement: New Alignment

NHPP:

This project is the first phase of the design and construction of French Creek Parkway. It will provide a roadway connection between Main St. and Taylor Alley in the Borough of Phoenixville, and include a new traffic signal, a new bridge over French Creek, and 0.4 miles of new collector roadway and sidewalk network. It is the first phase of the French Creek Parkway Master Plan and will support the redevelopment of a 120-acre brownfield site into a mixed use development with office, retail, and residential uses.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2012 annual memoranda on supplemental strategies for details related to this project.

The project involves the replacement of the Old Gap Newport Pike Bridge over Valley Creek. The existing Old Gap Newport Pike Bridge is a two span, steel I-beam bridge that was built in 1930 and rehabilitated in 1950. The bridge, owned and operated by Atglen Borough, was determined eligible for listing on the National Register of Historic Places. Project involves minimal roadway work and utility pole relocation. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

CMP Subcorridor(s): 9A

PennDOT Class: Bicycle/Pedestrian

PennDOT Improvement: Bicycle/Pedestrian

NHPP:

Construction of a 9.8 mile trail from Township Line Rd. in East Pikeland Township to US 422 over the Schuylkill River in North Coventry Township. The trail will be located within existing railroad and PECO Energy corridors, railroad and utility rights-of-way, existing bridges, canal towpaths, and public and private open space. This project will connect several parks and open space preserves and will provide a safe route for bicyclists and pedestrians traveling in along the US 422 and Schuylkill River corridor. Local funds will be used for environmental studies, preliminary engineering, final design, and right-of-way. This is a critical segment of a 130-mile multi-use regional trail connecting Philadelphia to Schuylkill County and other projects related to completing the trail include MPMS #61885.

This project is one of several phases of the Schuylkill River Trail which will ultimately follow the Schuylkill River through the City of Philadelphia from the River's terminus at the Delaware River through to the Montgomery County border where the trail will ultimately connect to the Chester Valley Trail and continue west through Chester County. It will connect residential communities with major employment, school, medical, retail, and service centers in Philadelphia, Bridgeport, Norristown, King of Prussia, Great Valley, and Exton, and in addition an eventual connection to the East Coast Greenway. These linkages will provide an extensive trail network through the DVRPC region.

This project is part of The Circuit. The Circuit is a 750-mile interconnected network of multi-use trails spanning Greater Philadelphia with Philadelphia and Camden as its hub, and is included in DVRPC's Long-Range Transportation Plan. Circuit trails will generally meet minimum design standards (10-foot wide, paved, and separated from traffic) to reflect their intended use as the arteries of a dedicated regional non-motorized transportation system. Circuit trails located near and connecting to downtown Philadelphia are already used heavily for transportation purposes, and the implementation of the network will further encourage the surging growth of bicycle commuting in the region. At 2.3%, Philadelphia has the highest bike-to-work percentage of the 10 largest cities in the country according to the 2013 American Community Survey.

PennDOT Class: Additional Lanes

PennDOT Improvement: Additional Lanes

NHPP: Y

Construction funding for this project in FY17 is to cover Accrued Unbilled Costs (AUCs).

This project involves widening and reconstruction of approximately 2.5 miles of Limited Access Highway from the SR 0030 (Exton Bypass) to the Valley Creek Bridge. In addition, improvements will be made at the SR 401 interchange area, which include widening SR 401 between the ramp intersections, along with the installation of traffic signals at the ramps. An additional lane and shoulder in each direction will be added within the existing grass median along the mainline. Widening of SR 401 will occur between ramps. Additional left and right turn lanes will be added along SR 401 to accommodate ramp turning movements. There will be no bike/ped facilities along the Limited Access Highway portion, however Chester County's future Chester Valley Trail will cross beneath the highway approximately one-half mile south of the SR202/SR401 Interchange through a proposed culvert. To accommodate pedestrians and bicyclists using the future Chester Valley Trail, the existing 3-span bridge crossing over the trail will be replaced with a continuous pre-cast arch culvert approximately 250' in length and will be paved within the states right-of-way. Also included is the construction of SWM basins and installation of sound barrier walls. Additional improvements along SR 401 within the interchange area includes striping, signing and signal indications and the ramp intersections.

This project is coordinated with MPMS #64494 (Section 320 construction), MPMS #84410 (Section 300 CMP Commitments), and MPMS #14675 (Chester Valley Trail).

Section 300 of US Route 202 has been broken out into 4 major construction contracts: 2 advanced overhead bridge projects (MPMS #64493 and #65613) and 2 mainline reconstruction sections (MPMS #64494 and #64498).

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2011 annual memoranda on supplemental strategies for details related to this project. (Many CMP commitments are also relevant for US 202 Section 400.) Also see MPMS #84410 for the CMP package of transit services for this project.

NHPP: Y

This project is the replacement of an existing single span adjacent box beam bridge with a precast reinforced concrete arch culvert (CON/SPAN). The existing and the proposed structure will be located under 12.0' of fill. It is not considered historical. The existing sufficiency rating is 44.7. The structure currently has an ADT of 13,777 with 21% trucks. The existing lane widths are 11' and each shoulder is 8' (total 38'). The proposed structure will have 12' lanes with a 12' shoulder on the left and a 16' shoulder on the right (total 52'). The larger shoulder is required for traffic control during construction. Approach roadway work will be approximately 1/2 mile (includes SR 41/Section NPP) to provide a lane and shoulder width that meets current criteria in order to maintain traffic during construction. There are no existing pedestrian or bike features. There are no planned pedestrian or bike accommodations. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

Streetscape program to improve pedestrian safety and to beautify Lincoln Highway (Bus. Rt 30) in Sadsburyville (Sadsbury Township, Chester County) through the introduction of sidewalks, crosswalks, street trees and traffic calming elements.

The Sadsburyville Village Traffic Enhancement Project involves the provision of improvements along a portion of Lincoln Highway (Business Route 30) to increase pedestrian safety and mobility within the historic village of Sadsburyville, Sadsbury Township, Chester County, PA. The scope of the traffic enhancements include the installation of sidewalks, crosswalks, curb extensions and bulb outs, traffic islands, and tree planting. These improvements, along with lane re-striping, will facilitate on-street parking, while reducing vehicle speeds, increase pedestrian mobility, and generally improve the streetscape in this village.

\$436,250 TE funds were approved during the FY2004 project selection process, to be programmed at the appropriate time, drawing funds from MPMS #64984.

PennDOT Class: Home Town Streets

PennDOT Improvement: Home Town Streets

NHPP:

This project will provide for pedestrian improvements in the Central Business District within West Grove Borough along Evergreen Avenue, Prospect Avenue and Exchange Place. Improvements include sidewalk replacement, crosswalks, lightning, street furniture and street trees.

Home Town Streets/Safe Routes to School (HTSSRS) programs are intended to improve the quality of life in our communities. Projects aim to encourage reinvestment in and redevelopment of our downtowns, and to establish safe walking routes for children to commute to school where feasible. This project was recommended in the spring of 2005 for funding through the HTSSRS program. \$1 million funding will be drawn down at the appropriate time.

IPD: 1

PROJECT MANAGER: TSS/M. Saintval **CMP:** Not SOV Capacity Adding

CMP Subcorridor(s): 16A

PennDOT Class: Safety Improvement

PennDOT Improvement: Safety Improvement

NHPP: Y

The DVRPC PA 100 Corridor Safety Study identified necessary safety improvements along the Route 100 Corridor in five townships of Chester County to help reduce the incidents of speeding and the number of accidents. The police pull out, climbing lane, and Dynamic Message Sign improvements are planned measures to slow motorists down in order to reduce the number of "hit fixed objects" accidents that occur within this corridor due to drivers travelling "too fast for conditions". The SR 0023 and SR 0100 intersection improvements will be designed to reduce the number of angle and rear-end crashes that occur at this location, especially due to factors such as PM peak hour traffic congestion and intersection geometry. Locations: PA 100 N & S. Coventry, E. Nantmeal, W. Vincent & Upper Uwchlan Twps. Corridor Safety Improvements. 9.36 (miles). Companion with MPMS #80044.

FD (\$450,000 estimate), ROW (\$450,000 estimate), and CON (\$6,500,000 estimate) will be drawn from MPMS #57927 at the appropriate time.

PennDOT Class: Highway Restoration

PennDOT Improvement: Highway Restoration

NHPP: Y

This project provides for the final design, right-of-way, utility and construction phases of the Coatesville-Downingtown Bypass Reconstruction - western section - by reconstructing and widening the mainline shoulders; replacing and widening the mainline bridge superstructures; constructing new ramps (to complete partial interchanges); reconstructing, realigning, and lengthening all on and off ramps (to provide storage length for traffic signals and/or ramp metering); reconstructing arterial overpasses; and providing minor improvements to parallel arterial routes (to be determined). This project also includes upgrading the Airport Road interchange to a full interchange.

The overall corridor construction cost estimate is \$630 million. MPMS# 14532 provides for the preliminary design portion of this project and the eastern section, as well as additional study work to determine the approach to address further needs of the eastern (MPMS #87781) and western sections.

Project CMP (Congestion Management Process) commitments include expansion of Intelligent Transportation Systems (ITS) equipment throughout the corridor, signal improvements on parallel arterials, numerous improvements to rail transit stations and services in consultation with SEPTA and Amtrak, improved access to rail stations, sidewalks and other improvements for pedestrians and bicyclists on parallel arterials, investigation of park-and-ride locations, and outreach to employers to promote transportation demand management strategies. See DVRPC's 2016-2017 memorandum on supplemental strategies for details related to this project.

The scope of work for this project was developed from the Road Safety Audit which was conducted in November 2006 and undertaken by DVRPC in conjunction with the Pennsylvania Department of Transportation. The purpose of this project is to reduce the number of crashes and related injuries and severity of the crashes which occur along the approximate five mile section of PA Route 896, between Elbow Lane in London Britain Township and Shepherd Lane in New London Township. This project will include: Increasing the lane width and shoulder width along PA Route 896; installing appropriate signage along PA Route 896; improving drainage along PA Route 896; installing raised pavement markers (RPM), delineators, and rumble strips along PA Route 896. Estimated total project cost is \$13,218,000.

FD (\$1,200,000 estimate), ROW (\$1,000,000 estimate), UTL (\$250,000 estimate), and CON (\$8,200,000 estimate) will be drawn from MPMS #57927 at the appropriate time. FY10 - Regional Safety Program.

This project involves the rehabilitation of the Route 202 bridges spanning Amtrak located just south of the S.R. 0202/US 30 Exton Bypass Interchange in West Whiteland Township. The proposed work consists of full deck replacement including new expansion joints, parapets, scuppers, downspouts, and approach guide rail transitions. Additional work includes new approach slabs; painting steel girders, as needed; repair of pier caps (Piers 3 and 5) and abutment stems (far abutment), as needed, and steel girder retrofits and/or strengthening details, localized re-grading, replacement of the slope wall in front of the near abutment, and replacement of the existing concrete crib wall along Dunwoody Drive. Also included in this project is the relocation of a section of fiber optic cable and the replacement of four (4) existing DMS (panels only) to be functionally consistent with other LED signs along the corridor.

This project is a breakout of US 202, Section 320 and 330 (MPMS #64494).

This project includes improvements that will help reduce congestion and increase safety at the intersection of US 202 and SR 926 through lane reconfigurations, striping, upgrades to the traffic signal, signal timing, and bicycle and pedestrian improvements. The roadway improvements for this intersection include installation of a southbound right-turn deceleration lane on US 202 and an additional eastbound left-turn lane on SR 926, creating a double left-turn configuration along the eastbound approach onto Route 202 NB. Pedestrian and bicycle intersection improvements include physical upgrades such as crosswalks, ADA ramps, pedestrian landings, as well signal equipment upgrades for pedestrian push buttons, countdown signal heads, and lighting.

This project is a replacement or rehabilitation of Thompson Davis Bridge, carrying Creek Road (T542) over Pickering Creek in Schuylkill Township. This is a County owned bridge (#175) that is structurally deficient (sufficiency rating of 15.6), functionally obsolete, and posted at 15 tons. This 54 ft. single span, steel I-beam bridge was built in 1879 and carries approximately 1,716 vehicles per day. This Project was listed in the 1986 Bridge Bill (Act 100, pg 360, ID MM). BMS# 15701505420175.

Funding for this project will be drawn down from the County Bridge Line Item (MPMS# 95447) at the appropriate time.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

Construction of a roundabout is anticipated at this location. The project will provide a safe and efficient means of accommodating the regional movement of people, goods and services and to provide for local access connections to support the existing community and businesses in the village of Chatham. Currently, the intersection of PA 41 & PA 841 has a confusing layout, traffic is forecasted to operate in LOS E on the PA 841 approaches to the intersection in the design year (2035), and there are limited pedestrian accommodations.

Pursuant to the completion of a needs assessment in 2014, an alternatives analysis, identified ten alternative concepts. Five of these alternatives were selected for additional evaluation. A preferred alternative for this intersection will be determined, which may take several years due to the complexity of the engineering solutions and environmental features and impacts. An improvement study of Chatham village recommended a gateway treatment on PA 41 that would support many of the short-listed alternatives. This gateway project is a companion project, MPMS #105755.

Construction of a roundabout is anticipated at this location. Improvements will provide an opportunity for all users to make safe movements at the four-way PA 41/PA 926 intersection that is currently skewed at approximately 23 degrees, as well as accommodate future traffic demands. Presently, traffic control consists of stop signs on the minor street (PA 926) approaches, with no posted turn restrictions. The approaches of PA 41 consists of one left turn lane and one shared through/right turn lane, while the approaches of PA 926 consists of a single shared left turn/through/right turn lane. After the completion of a needs assessment in 2014, an alternatives analysis identified four alternatives; three of these alternatives (including two alternatives that contain a roundabout) were selected for further evaluation.

PE activities are being completed under MPMS# 14484.

This project will provide for the installation of sidewalks along the identified roadways, so pedestrians can access schools, health centers, social services, recreation centers, businesses, stores and restaurants in a safe manner. The main reason for this project is to provide safe pedestrian pathways for residents of the community to walk to and from their houses and businesses. The proposed limits of the 5' wide sidewalks are along 1) W. Baltimore Pike at Mill Road west to the Penns Manor Subdivision (Penns Manor Drive); 2) along West Cypress Street at S. Mill Road west to Scarlet Road; 3) Along Rosedale Road from McFarlan Road west to Kennett HS Athletic Fields; and 4) along McFarlan Road from Rosedale Road to Granite Ridge subdivision.

\$850,000 Regional TAP funds were approved during 2014 project selection process, to be programmed at the appropriate time, drawing funds from MPMS #64984.

PennDOT Class: Transportation Enhancement

PennDOT Improvement: Transportation Enhancement

NHPP:

This project will provide for new multi-use trail and sidepath connections along the frontage of the Upland Farms property along Route 100 and Little Conestoga Road (SR 4016) as part of the Upland Farms and Park Road Trail Connections.

The multi-use trail connections that will be developed are part of Upland Farms Park Connection (the north-south spine of the Township's trail and sidewalk network and a critical connection to the Village of Eagle) and are as follows: an 8-foot wide asphalt multi-use trail on the west side of Pottstown Pike (SR 0100) between Upland Farm Park Driveway (near the northern intersection of Pottstown Pike and Graphite Mine Road) and Darrell Drive (Approximately 325 feet in length); and a 6-foot wide asphalt sidepath on the west side of Pottstown Pike (SR 0100) between Darrell Drive and the northern terminus of the existing sidepath at the Reserve at Waynebrook Development (Approximately 200 feet in length).

The new sidepaths that will link with existing sidepaths (for bicyclists only) are part of the Park Road Trail Connection (the east-west spine of the Township's bicycle and pedestrian network) and are as follows: a 6-foot wide asphalt sidepath on the west side of Pottstown Pike (SR 0100) between the southern terminus of the existing sidepath at Reserve at Waynebrook Development and Park Road (T523) (Approximately 750 feet in length); and a 6-foot wide asphalt sidepath on the north side of Little Conestoga Road (SR 4016) between Park Road (T523) and the eastern terminus of the existing sidepath in front of Marsh Creek Signs (Approximately 475 feet in length).

\$560,000 Regional TAP funds were approved during the 2014 project selection process, to be programmed at the appropriate time, drawing funds from MPMS #64984.

NHPP:

New concrete pedestrian path will be installed with ADA compliant curb ramps at intersections and major driveways and meet all applicable federal, state and local ADA guidelines. The path will be installed with a width of 5 feet and maintain a buffer area in accordance with the design guidelines. At the western terminus of the project near Fennerton Road, the path will transition to meet the existing sidewalk in front of the Station Square Office Campus. The future developer of this property will be required to extend the facility in kind along their property frontage of both East Central Avenue and North Valley Road. At the eastern terminus of the project, the path will transition to meet the curb ramps to be constructed by the PA 252 Underpass at US30 (F) project (MPMS #85062) on the southwest corner of East Central Avenue's intersection with Bearhill Road (SR 0252). The project will maintain the existing curb line and provide striping for on-road bicycle lanes along East Central Avenue. Additionally, the project will install five stamped-asphalt raised crosswalks across East Central Avenue at intersecting local roadways. Additional signage and pavement markings will be provided to alert motorists to pedestrian and bicycle activity. Vegetated swales and stone infiltration trenches will provide stormwater management for the path. The vegetated swale will be located in the buffer area between the existing curb and edge of the path, consisting of a trench of modified soil, plantings, stone, and geotextile.

December 11, 2014 - In summer of 2014, PennDOT held a competitive round of 2-years worth of funding. As a result, this project was one of 13 projects across the DVRPC region that received \$1,097,360 on 11/10/2014 through the statewide TAP program (MPMS #60560) out of the \$7.8 million awarded to the region. Statewide, PennDOT made \$33 million available for 56 projects across the state.

FC:

AQ Code:2020M

PLAN CENTER:

IPD: 1

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

The project will involve the installation of adaptive signal control technology (ASCT) at 10 intersections located on or adjacent to West Chester Pike (SR 0003) in East Goshen, West Goshen and Westtown Townships. West Chester Pike (SR 0003) is a major arterial that runs through Chester and Delaware County in an east/west direction. In the project area, West Chester Pike connects eastern Chester County and parts of Delaware County with US Route 202, which is one of the major expressways in Chester County. There are 11 traffic signals located on the three mile segment of West Chester Pike that comprises the project area. With an AADT count approaching 30,000 vehicles, traffic back-ups are routine during both the morning and evening rush hours. In addition to the normal motorist, these backups also cause delays with SEPTA's Route 104 bus line which utilizes West Chester Pike. The Route 104 has SEPTA's 7th highest ridership of all of their suburban bus lines. At the eastern end of the project area, North and South Chester Roads (SR 0352) intersect with West Chester Pike at separate intersections. The resultant dog leg movement that motorists using SR 0352 must make and an AADT of ~15,000 routinely results in backups on SR 0352 and West Chester Pike at these intersections.

PennDOT Class:

PennDOT Improvement:

NHPP:

East Vincent Township is looking to add left-turn lanes to the south-bound lane of Schuylkill Road (S.R. 0724), turning onto New Street, and a dedicated left turn lane from New Street (S.R. 1043; to turn into the south-bound lane of Schuylkill Road). The major problems existing at this site are the lack of dedicated turn lanes. A driver making a left turn in any direction must wait in the only existing lane which causes a back-up of drivers who are also trying to go straight or turning right. Some drivers turning right will pass the driver at the front of the lane on the right, which poses a dangerous situation.

The project will upgrade the controls for 4 traffic signals at critical intersections. Including, 2-way video, Wavetronix, battery back ups, signals and new controller and cabinet. This project will provide for safer intersections and less down time. At three (3) intersections the battery back ups will be replaced so that there is no down time during power outages. The 2 way video will be added for two (2) intersections which will eliminate maintenance of trip wires, less repairs and safer traffic patterns. Wavetronix will provide an alert system to handle the traffic flow easier during high traffic times. New controller cabinets will be added to handle all of the upgrades.

To perform Preventive Maintenance, Emergency Response Maintenance, and Routine Maintenance for the twenty-seven (27) signalized intersections located within Critical Corridors and Designated Corridors in West Whiteland Township in order to preserve traffic signal infrastructure necessary for the safe and efficient utilization of roadways within the Township. West Whiteland Township is the center of the regional commercial area, as well as, a major employment area of Chester County. Within the borders of West Whiteland Township, are the major regional traffic routes of Route 100 and Business Route 30. Over all, West Whiteland Township has thirty-six signalized intersections - twenty-two are within critical corridors, five are within designated corridors, and nine are on local roads. In addition to these signalized intersections, there are two flasher locations (King Road, east of Ship Road and Route 100 Northbound, south of the Exton By-Pass) and two school signal locations (Mary C. Howse Elementary School, Boot Road and Ss. Phillip and James School, Business Route 30). In order to support the efficient operation and maintenance of traffic signals, a Traffic Signal Maintenance Program that includes annual preventive maintenance, emergency repair, and routine maintenance has been established.

PennDOT Improvement:

NHPP: Y

Traffic calming gateways along SR 41 on the north & south intersection approaches to SR 841 (London Grove Road) will be constructed.

The purpose of this project is to provide a safe and efficient means of accommodating the regional movement of people, goods and services and to provide for local access connections to support the existing community and businesses in the village of Chatham. An alternatives analysis, completed in August 2015, identified ten alternative concepts. Five of these alternatives were selected for additional evaluation. The improvement study of Chatham village recommended a gateway treatment on PA 41 that would support many of the short-listed alternatives. This gateway project is a companion project to the PA 41/PA841 intersection project, MPMS #102708.

Advanced Intelligent Transportation Systems (ITS) assets will be provided for the US 30 corridor including US 30 Bypass and Business as well as surrounding arterial roads (PA 113, US 322, PA 340, Reeceville Rd, PA 82, Airport Rd, PA 10). Advanced ITS will include CCTV cameras, dynamic message signs, EZ Pass tag readers, RTMS incident detectors, fiber communications systems and expressway service patrol. Advanced ITS is necessary to address future operational needs in the and help with incident and event monitoring, help monitor congestion levels, support corridor management on expressway and arterials, disseminate real-time information, collect and provide travel-time information and share video images.

The US 30 corridor is a heavily traveled corridor through the center of Chester County. Sections of the US 30 Bypass Expressway see daily traffic volumes upwards of 75,000 vehicles. Surrounding arterial roads also experience high traffic volumes and peak hour congestion particularly in the event of traffic incident diversions off of the expressway.

PennDOT Class:

PennDOT Improvement:

NHPP:

A multi-use trail will be constructed on the north side of Paoli Pike (SR 2014) between Reservoir Road (T-470) and Boot Road (SR 2020) with enhanced crossings at the Paoli Pike and Boot Road intersection to connect office, retail, educational, residential, recreational, and government land uses along the Paoli Pike corridor.

The Paoli Pike Trail was identified in the Central Chester County Bicycle and Pedestrian Plan (2013) as Priority Project H to connect the East Goshen Township Park and Applebrook Park with neighboring municipalities and destinations. The Paoli Pike Trail also has the potential to provide future connections to the Greater Philadelphia Regional Trail Network, known as the Circuit. The Paoli Pike Trail is approximately three miles south of the Chester Valley Trail and five miles east of the East Branch Brandywine Trail, which are both part of the Circuit. Both trails are within biking distance and connections to the regional trail network will expand use of the Paoli Pike Trail for both transportation and recreation purposes.

Project was awarded \$1,000,000 regional TAP (TAU) funds from the 2016 TAP round, which was approved by the March 24, 2016 DVRPC Board. Approximately \$7.6 million was available for the five-county Southeastern Pennsylvania region.

The efficient operation of US 202, US 30, PA 100, and Pennsylvania Turnpike corridors is fundamental to the vitality of Central Chester County. Due to limited capital funding for capacity improvements, alternative strategies to maximize the current and future operating performance of these roadways continues to be identified. Reflecting increased federal emphasis on utilizing Transportation Systems Management and Operations (TSMO) strategies, the study will produce an update to the 2011 Transportation Operations Audit for US 202, Section 200 (DVRPC Publication 10041) in the first phase, and further analysis of select intersections in the second phase. FY 18 tasks focus on Phase 1 of the US 202, Section 200 Operational Analysis.

Updating the previous transportation audit with current information including crash statistics and now available travel time data, the primary focus for Phase 1 will be identifying low-cost/high operational benefit improvements for PennDOT, municipalities, emergency responders, and other corridor stakeholders.

The primary focus for Phase 2 will be to use microsimulation tools to analyze medium term and long term recommendations from Phase 1.

This project will upgrade the traffic signal at the intersection of Horseshoe Pike and the Brandywine Village Shopping Center by installing LED modules, improving signs, and installing emergency pre-emption.

FC:

AQ Code:S19

PLAN CENTER:

IPD: 0

PROJECT MANAGER: TSS/GANNETT/S. New **CMP:** Not SOV Capacity Adding

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

This project involves rehabilitating or replacing Station Road over Chester Creek in Thornbury Township, a single span bridge.

The Station Road bridge is a one lane, reinforced concrete T-beam bridge constructed in 1914 over Chester Creek in Thornbury Township. The width of the bridge is currently 18'-0" due to the numerous bituminous overlays which have concealed the original concrete curbing that previously provided a 16'-8" bridge width. It is currently posted for three tons. The purpose of the project is to correct the structural and safety deficiencies of the bridge to provide a safe and efficient crossing over Chester Creek. The bridge serves residents with local deliveries, school bus transportation, emergency services and access to the local post office located south of the crossing.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This project involves rehabilitating or replacing two bridges on Ardmore Avenue between Harvest Lane and Haverford Road. One bridge crosses Cobbs Creek and one crosses SEPTA's Norristown High Speed Line. The 62'-long encased steel stringer bridge carries a 2 lane road and sidewalk over SEPTA's Norristown High Speed Line. This road segment is included in the Delaware County Bicycle Plan. This bridge will complete the connection to the station. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

The project does include construction of new stairs and ADA ramps on both sides of bridge down to the station platform areas.

This project will entail the reconstruction and reconfiguration of this cloverleaf interchange, originally built in 1939.

This project involves reconstructing the US 1/PA 352 interchange at the terminus of the Media Bypass, upgrading roads and intersections, and traffic signals. Project includes improvements along US 1 beginning at the intersection with PA 452 to east of the Media Bypass, and along PA 352 beginning north of the Williamson Free School entrance drive to the intersection of PA 352 / PA 452. Local street improvements are included to improve circulation and provide access. Pedestrian facilities will be included in improvements.

This road segment is included in the Delaware County Bicycle Plan. SEPTA 110, 111, and 117 bus routes use Routes 1 and 352.

Funding for this project is to address Accrued Unbilled Costs (AUC).

This project includes rehabilitation of the bridge carrying S.R. 0001 (Township Line Road) over the SEPTA Norristown High Speed Line. The existing bridge is a single-span steel I-beam structure that is 62 feet long and 56 feet wide. The proposed bridge will be a prestressed concrete box beam structure that will be 61 feet wide. The existing roadway has four 11-foot lanes, two 5-foot sidewalks, two 1-foot exterior walls, and no median. The proposed roadway will have four 11-foot lanes, two 2-foot shoulders, a 6-foot right sidewalk, a 5-foot left sidewalk, two 1-foot exterior walls, and no median.

This road segment is included in the Delaware County Bicycle Plan.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This project involves rehabilitating or replacing the superstructure of the Sellers Avenue Bridge over Amtrak while reusing the existing stone abutments. The roadway profile is expected to be raised between three and four feet. Replacement of the bridge will require the rerouting of catenary wires and the relocation of railroad signals. Vehicular traffic will be detoured around the site but pedestrian access will be maintained using staged construction. The new bridge design will accommodate the existing utilities at this location. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

Funds will cover accrued unbilled costs.

The purpose of this project is to replace the existing culvert which conveys SR 3007 (Locally known as Concord Road) over Baldwin Run. The existing culvert is a stone masonry and concrete arch with a maximum span length of 18', approximate height of fill of 20' from stream bed to roadway grade and approximate width of 28.8' conveying two lanes of traffic. It is scheduled for replacement due to its condition being structurally deficient exhibiting severe cracking in the adjacent retaining walls, loss of mortar along the fascias and section loss in the substructure units. The project will provide a replacement structure along a new alignment located immediately to the west (upstream) of the existing alignment. Traffic will be maintained along the existing alignment during the construction of the new structure and approach roadways. The roadway width will be 36' throughout the project limits. The alignment and profile of the new roadway shall be significantly improved eliminating existing substandard horizontal and vertical curves. The proposed structure will be a 77' long, 16' wide x 10' high reinforced concrete box culvert with flared wingwalls at the inlet and outlet. The proposed roadway will be constructed upon approximately 10' of earthen fill over the top slab of the culvert. Appurtenant roadway features include curb, guiderail, signage, pavement markings, roadway drainage, vegetated swales and a stormwater infiltration basin. The project will impact 0.16 acres of palustrine forested wetlands and will therefore include construction of a 0.5 acre wetland mitigation site which is located in close proximity to the project site.

This road segment is included in the Delaware County Bicycle Plan.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

LIMITS Over West Branch of Chester Creek

Est Let Date: 1/18/2019

IMPROVEMENT Bridge Repair/Replacement

MUNICIPALITIES: Aston Township

FC:

AQ Code:S19

PLAN CENTER:

IPD: 1

PROJECT MANAGER: TSS/GANNETT/S. New **CMP:** Not SOV Capacity Adding

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

Replacement of this County-owned concrete T-beam bridge built in 1931. The superstructure is in poor condition with cracks and significant spalls throughout. Exposed reinforcing steel is visible on the bottom of the deck. The beams are in overall serious condition with exposed reinforcing steel, large spalls, and heavy leaching. If the bridge is not repaired, the concrete will continue to crack and the bridge will continue to deteriorate. The project has been right-sized during the scoping phase of the project. This bridge has a stone façade and is not a structural stone arch bridge. This project is subject to standard PENNDOT design procedures as defined in the Bicycle/Pedestrian Facilities checklist and is less than 1/2 mile from the Chester Creek Trail.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Improvement: Bridge Replacement

NHPP:

Major rehabilitation/superstructure replacement of this County-owned bridge in downtown Chester. This bridge currently has a 8 ton weight limit. This road segment is included in the Delaware County Bicycle Plan.

The existing bridge, built in 1920, is a 180-foot, two-span steel through-girder structure with stone masonry abutments, masonry retaining wall and two pier columns. This bridge is severely deteriorated and repairs to the bridge cannot restore its structural soundness. It will be replaced with a single span multi-girder structure, with concrete barriers and sidewalks. The substructure will consist of reinforced concrete cantilever abutments and U-shaped wing walls. The new structure will provide 12-foot wide travel lanes, with 4-foot wide shoulders through the project area. An 8-foot sidewalk will be located on both sides of the structure.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

CMP Subcorridor(s): 5E

PennDOT Class: Safety Improvement

PennDOT Improvement: Safety Improvement

NHPP: Y

The project consists of the upgrade and interconnection of 16 signalized intersections along a 3.2-mile multi-lane state route to enhance motor vehicle flow along the corridor. Signalization improvements will specifically involve full modernization of intersection signalization equipment. Existing equipment will be removed and replaced by new equipment including signal supports, traffic controllers, signal heads and all electrical equipment including wires and conduit

This road segment is included in the Delaware County Bicycle Plan. SEPTA 107 and 109 bus routes use this road.

Intersections in the project are Baltimore and the following cross streets: Bishop, Delmar/Home Depot, Oak, Church Street, Springfield, Diamond, SEPTA Route 102, Marple, Jackson/K-Mart, Scottdale/Burmout, Martin/Mansfield, Lansdowne, Wycombe, Union, Giant, Penn/Fourth, and Church Lane. Also, on Springfield the following cross streets: Broadway, West Madison and Woodlawn.

PennDOT Improvement: Safety Improvement

NHPP: N

The project includes widening of the intersection of Morton Ave. and Swarthmore Ave. to provide proper turning radii and left turn lanes. The roadway will be widened and resurfaced at the intersection where needed. Existing lane widths will be maintained except where widening will take place. The new lane widths at this location are 2-12 ft travel lanes, 2-2 ft shoulders and a 10 ft left turn lane. The sidewalk is intermittent through this section of Morton Ave and will be constructed to provide pedestrians with a continuous walkway from Swarthmore Ave. to Ridley High School (9th St.). Traffic signal upgrades/replacement will take pedestrian traffic into account. The four existing traffic signals at the intersection of Morton Ave. and Swarthmore Ave. will be replaced with new signals. The system will be traffic responsive via loop detectors. The project will comply with the Regional ITS Architecture.

PROJECT MANAGER: TSS/GANNETT/S. New

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 5B

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

This project will entail the complete replacement of the Convent Road Bridge. The existing structure is a two-span concrete structure built in 1927 that carries Convent Road over the confluence of Chester Creek and its west branch. Severe deterioration extends through the deck superstructure and substructure, resulting in a 20-ton weight restriction. The bridge is currently 20 feet wide with a 6 foot wide concrete sidewalk provided on the upstream side of the structure. The bridge is located on a significant horizontal curve at both approaches. Heavy industrial development is present on the northern approach; residential development exists on the southern approach. The two-lane approach roadways are unlined and no safety features are provided.

A new structure will replace the existing bridge along the same alignment; the width of the new structure will be wider than the existing. Although significant changes to the roadway and bridge profile are not anticipated, minor roadway approach work will be required. The new structure will comply with current PennDOT design standards including an increased weight limit, which will allow the passage of larger vehicles. The bridge currently has a PennDOT sufficiency rating of 18.3. This bridge is .1 mile from the Chester Creek Trail. This project is subject to standard PennDOT design procedure as defined in the Bicycle/Pedestrian Facilities checklist.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Congestion Reduction

PennDOT Improvement: Congestion Reduction

NHPP: Y

The project limits are along MacDade Boulevard from South Avenue to Cherry Street. The following 11 intersections are currently signalized and the equipment will be replaced with new state of the art controllers to allow for coordinated signalization and improved traffic flow management and pedestrian safety: (1) MacDade Boulevard & South Avenue; (2) MacDade Boulevard & Knowles Avenue; (3) MacDade Boulevard & Ashland Avenue; (4) MacDade Boulevard & Cooke Avenue; (5) MacDade Boulevard & Oak Lane (S.R. 2015); (6) MacDade Boulevard & Lafayette Avenue; (7) MacDade Boulevard & Woodlawn Avenue; (8) MacDade Boulevard & Clifton Avenue (S.R. 2013); (9) MacDade Boulevard & Felton Avenue; (10) MacDade Boulevard & Roberta Avenue; and (11) MacDade Boulevard & Cherry Street. The following two intersections are currently signalized, but the traffic signals will be removed and replaced with stop control for the side streets: (12) MacDade Boulevard & Jackson Avenue and (13) MacDade Boulevard & Sharon Avenue.

The system will initially be implemented with time of day programs. However, the system will be specified to be traffic responsive capable allowing traffic responsive timings and programs to be implemented in the future, if desired. The system will be a true 'closed loop' system where the system can be monitored from either a direct connect or remote central monitoring station. PennDOT's District 6-0 Office will have direct access to the central monitor system and the main server will be located there. The municipalities will have access to the system through separate work stations via the internet (VPN). The traffic signals will be connected via fiber optic cable.

ADA compliant curb ramps, countdown hand/man pedestrian signal heads and pedestrian push buttons are proposed. Some of the intersections use standard red-yellow-green signals for pedestrians that will be replaced with universal hand/man pedestrian signal heads with countdown timers. The northbound approach of Oak Lane will be widened to provide a dedicated left turn lane. This road segment is included in the Delaware County Bicycle Plan. SEPTA's Route 107 and 113 buses use this road.

PennDOT Class: Safety Improvement

PennDOT Improvement: Safety Improvement

NHPP: Y

Existing signalization and geometry is outdated. Substandard signal head configuration and size create a safety hazard. Roadway geometry is not adequate for proper turn movements, especially for buses. Traffic movement is impacted by inability of buses to negotiate turns. Intersection is heavily used by both SEPTA Route 107 and school buses. Proposed solution would be modernization of signals, road widening and channelization. Pedestrian Hand/Man signals with countdown indicators will be provided at each crossing. Project would alleviate safety problems and enhance turning movements. Design and ROW are being advanced by the township.

This road segment is included in the Delaware County Bicycle Plan.

PennDOT Improvement: Additional Lanes

NHPP: Y

The project involves widening SR 322 (currently two lanes) to a four lane typical section with a grassy median strip from US Route 1 in Concord Township to east of Mattson Road/Featherbed Lane near Clayton Park and the Bethel Township line. Auxiliary right turn lanes will be provided at intersections.

Intersection improvements will include the following:

- Reconstruction of existing traffic signal at US Route 1 and construction of additional turn lanes on SR 322.
- Elimination of through and left turn traffic movements on Spring Valley Road and left turn traffic movements on SR 322.
- Reconstruction of existing traffic signal at Fellowship Road/Station Road Connector and reconstruction of Fellowship Road intersection to accommodate 4 lanes on SR 322 and a turn lane on Station Road Connector.
- Elimination of left turns from and into Station Road (SR 3025).
- Construction of a jughandle and a new traffic signal at Cambridge Drive intersection.
- Construction of a new traffic signal at Mattson Road/Featherbed Lane.

Although the widening from two lanes to four lanes will primarily entail widening to the south of the existing road to make use of the available right-of way, widening to the north or about the center will be done at some locations to minimize impacts to environmental and community resources. The bridge over SEPTA/ Webb Creek and the bridge over Smith Bridge Road will be replaced. Sound barriers and retaining walls will also be constructed in this section. This project may include other revisions as necessary. SEPTA's Route 119 bus uses this road.

See MPMS #14747 for design funding. MPMS #'s 69815, 69816, and 69817 contain construction phases for the US 322 project. This project includes ROW and UTL work for MPMS# 69815.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2009 annual memoranda on supplemental strategies for details related to this project.

NHPP: Y

The project involves widening and improving SR 322 to a four lane typical section with a grassy median strip from east of Mattson Road/Featherbed Lane near Clayton Park and the Concord Township/Bethel Township line, through Bethel Township, to just west of the CSX Bridge in Upper Chichester Township. The existing two lane section of SR 322 will be widened to 4 or 5 lanes with jughandles or exclusive left turn lanes to accommodate left turns at intersections. Between Chelsea Parkway and Cherry Tree Road a fifth center lane will accommodate left turns into and out of the adjacent commercial properties. Auxiliary right turn lanes will be provided at intersections. The existing four lane section from east of Cherry Tree Road to just west of the CSX Bridge will be improved. SEPTA's Route 119 bus uses this road.

Intersection Improvements will include the following:

- Closure of existing intersection of Garnet Mine Road (SR 3038, west of Foulk Road intersection).
- Reconstruction of Foulk Road (SR 261) interchange to a diamond configuration, including two new traffic signals.
- Construction of a new traffic signal at SR 322 eastbound ramps and Garnet Mine Road (SR 3038).
- Elimination of left turns from and into Colonial Drive.
- Reconstruction of existing traffic signal at Creek Parkway and reconstruction of Creek Parkway intersection to accommodate 4 lanes on SR 322.
- Elimination of left turns from and into Sommers Lane.
- Reconstruction of existing traffic signal at Chelsea Parkway and reconstruction of Chelsea Parkway intersection to accommodate 4 lanes on SR 322.
- Reconfiguration and reconstruction of Cherry Tree Road/Bethel Road intersection to accommodate 4 lanes on SR 322, including construction of a new traffic signal, a Bethel Road connector and left turn lanes on SR 322.
- Reconstruction of Market Street (SR 452) interchange to a partial cloverleaf configuration, including two new traffic signals.

Although the widening from two lanes to four lanes will primarily entail widening to the south of the existing road to make use of the available right-of way, widening to the north or about the center will be done at some locations to minimize impacts to environmental and community resources. The project includes the replacement of 10 bridges and major culverts. Sound barriers and retaining walls will also be constructed in this section. This project may include other revisions as necessary.

See MPMS #14747 for design funding. MPMS #'s 69815, 69816, and 69817 contain construction phases for the US 322 project TEA-21 DEMO 0486 - PA ID #116 - \$13,220,615

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2009 annual memoranda on supplemental strategies for details related to this project.

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 4C, 6A

PennDOT Class: Bicycle/Pedestrian

PennDOT Improvement: Bicycle/Pedestrian

NHPP:

Construction of the East Coast Greenway in Tincum Township, including approximately 3500 feet of multi-use hard surface trail on the south side of Route 291 from Darby Creek to 2nd street, amenities and signing. Once fully connected to adjacent segments of the East Coast Greenway, this trail is intended principally for transportation purposes, including trips to work, school, shops and services. Also included in the project is construction of the Tincum-Fort Mifflin trail, which is approximately 3200 feet of multi-use hard surface trail along the southerly side of 2nd Street, which will connect the main trail proposed through Tincum Township to the Fort Mifflin National Park site. Additional funding is included in project MPMS# 71200. This project is included on the Delaware County Bicycle Plan.

This project is part of The Circuit. The Circuit is a 750-mile interconnected network of multi-use trails spanning Greater Philadelphia with Philadelphia and Camden as its hub, and is included in DVRPC's Long-Range Transportation Plan. Circuit trails will generally meet minimum design standards (10-foot wide, paved, and separated from traffic) to reflect their intended use as the arteries of a dedicated regional non-motorized transportation system. Circuit trails located near and connecting to downtown Philadelphia are already used heavily for transportation purposes, and the implementation of the network will further encourage the surging growth of bicycle commuting in the region. At 2.3%, Philadelphia has the highest bike-to-work percentage of the 10 largest cities in the country according the 2013 American Community Survey.

Channelization & signalization of shopping center entrance and reconfiguration of northbound I-476 / eastbound MacDade Boulevard off-ramp. Traffic safety concerns generated the need for this project. Congestion on I-476 Northbound causes drivers to exit at MacDade Blvd, cross 4 lanes of traffic, and reenter I-476. The project also includes the creation of a full access signalized intersection at a local shopping center. A former uncontrolled median opening at the shopping center entrance was closed due to excessive accidents. SEPTA's Route 113 bus uses MacDade Boulevard.

This road segment is included in the Delaware County Bicycle Plan.

PROJECT MANAGER: TSS/P. Berthold **CMP:** Major SOV Capacity **CMP Subcorridor(s):** 8A

PennDOT Class: New Alignment **PennDOT Improvement:** New Alignment **NHPP:** Y

The existing Bridgewater Road (SR 3018), which currently ends in the Bridgewater Business Park west of Concord Road (SR 3007), would be extended to connect with either PA 452 or US 322 through Chester, Upper Chichester, and Aston Townships. This project would provide a more direct truck route between two industrial parks (Bridgewater Business Park and I-95 Industrial Park), I-95, and US 322. Currently, truck drivers must navigate a circuitous route (Concord and Bethel Roads) with difficult turns and drive through a low-income residential neighborhood and by a school. The residential community along Bethel Road in Chester City and Chester Township is subject to a heavy volume of truck traffic, which should be directed onto another route. The other potential truck route goes well to the north and involves an intersection which is physically constrained and difficult/impossible for truck turns. Preliminary engineering for the new road, which would be about one mile long, was begun by PennDOT in 2007 and terminated shortly thereafter. This project complements and was a breakout project of MPMS 15477 (I-95/US 322/Highland Avenue interchange)."

PROJECT MANAGER: TSS/GANNETT/S. New **CMP:** Not SOV Capacity Adding

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

The project will include the replacement of a single span, concrete bridge constructed in 1926. The structure is located in Aston and Middletown Townships. The bridge has the following condition ratings: deck - N, super - 3, sub - 5. This bridge is an arch under fill and therefore does not have a deck.

The structure is in overall serious condition with noticeable vibration under vehicular traffic and is currently posted with a 30-ton weight restriction. The bridge superstructure consists of a cast in place reinforced concrete closed spandrel arch exhibiting heavy cracking, rust staining and efflorescence. The bridge substructure consists of reinforced concrete abutments and U-shaped wing walls and exhibits rotation due to heavy scouring as well as cracking throughout. Substandard safety features include improper post spacing of the guiderail, improper or lack of a connection between the guiderail and parapet, and the limited sight distance on the north approach due to the existing parapet. It will be replaced with a single span composite steel multi-girder bridge, with a 109'-9" clear span. The new bridge will have an increased hydraulic opening which will decrease the water surface elevation of the 100-year flood. The proposed abutments will be located outside the existing streambed. The bridge approaches will be reconstructed to provide an 11-foot wide travel lane in each direction with 5-foot wide shoulders.

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

This project involves replacing or rehabilitating a single span, concrete slab bridge located in Folcroft Borough and Darby Township.

The existing bridge, built in 1932, is a 25-foot single-span bridge with a 16'-11" clear span. The bridge superstructure consists of a reinforced concrete slab with reinforced concrete parapets exhibiting heavy cracking, efflorescence and spalling throughout. The bridge substructure consists of reinforced concrete abutments and U-shaped wing walls exhibiting severe spalling, moderate to heavy efflorescence and cracking throughout. The bridge is considered "structurally deficient," limiting its load carrying capacity to a maximum of 18 tons except combination loads of 24 tons. The bridge will be replaced with a 28-foot single-span composite pre-stressed concrete adjacent plank beam bridge. The new structure will have a wider clear span of 17'-9" locating the proposed abutments outside of the existing waterway. The new bridge will have an increased hydraulic opening which will decrease the water surface elevation of the 100-year flood. Tribbett Avenue will be reconstructed to provide one 11-foot wide travel lane in each direction. A 4-foot wide shoulder will be provided on the upstream side of the bridge and a 2-foot wide shoulder on the downstream side.

This project entails rehabilitation and painting of eight (8) bridges spanning I-95 in the City of Chester. The estimated construction cost of this project is \$20,000,000 - \$25,000,000. The bridges are the Crosby Street Pedestrian Bridge, Edgmont Avenue (SR 0352), Madison Street (SR 0320), Upland Street (SR 0320), Potter Street, Walnut Street Pedestrian Bridge, Chestnut Street and Melrose Ave. The Potter Street and Melrose Ave. bridges will have their decks replaced. The Chestnut Street Bridge will have a bituminous overlay and the rocker bearings reset. The Upland Street Bridge deck will have an LMC overlay. All bridges will have miscellaneous concrete repairs, have the protective fence repaired or replaced, and will be painted. Edgmont Avenue and Chestnut Street are included in the Delaware County Bicycle Plan. SEPTA's Route 113 bus uses Melrose Avenue.

PLAN CENTER:

IPD: 2

PROJECT MANAGER: Gannett/V. Genua

CMP: Major SOV Capacity

CMP Subcorridor(s): 5B, 8A

PennDOT Class: New Alignment

PennDOT Improvement: New Alignment

NHPP: Y

The project completes the loop road on the southwest corner, connecting Hillman Drive to Painters Crossing/Brandywine Drive in the southwest quadrant. This new connection constitutes a minor roadway extension, but will not widen existing roads. The northeast, northwest, and southeast quadrants have the existing completed loop roads, State Farm Drive, Brandywine Drive, and Applied Card Way, respectively. See MPMS 105131 for Applied Card Way. Turning movements will be made at the intersections (i.e., no jug handles) for the proposed loop road connections, and at the Route 202/US 1 intersection. A completed loop road system will divert traffic from the Route 202/US 1 intersection. Roadway will include sidewalks, crosswalks, enhanced bus stop areas in consultation with SEPTA, and bicycle lanes or paved shoulders. SEPTA Route 111 serves this area. Extension of the right turn lane from northbound Route 1 to southbound Route 202, as well as improvements to intersection of Route 202/State Farm Drive/Brandywine Drive, are also part of this project.

This is a companion project to MPMS #105131.

Project CMP (Congestion Management Process) commitments include sidewalks and crosswalks, enhanced bus stop areas in consultation with SEPTA, and bike lanes or paved shoulders. See DVRPC's 2013-2014 memorandum on supplemental strategies for details related to this project.

PLAN CENTER: IPD: 3

PROJECT MANAGER: TSS/S. New CMP: Not SOV Capacity Adding CMP Subcorridor(s): 6A

PennDOT Class: Bridge Replacement PennDOT Improvement: Bridge Replacement NHPP:

This project is a bridge rehabilitation/replacement of the County owned Michigan Avenue bridge over Little Crum Creek, which is structurally deficient. The bridge is posted with a 12 ton weight restriction and requires continual maintenance to remain open. Various elements of the bridge are in poor condition. The project needs are listed below: 1) Load Carrying Capacity - Eliminate the "Structurally Deficient" designation. - Accommodate school buses, local delivery vehicles and emergency vehicles. 2) Structure Integrity - Bring the facility up to current design standards. The existing 12-ton carrying capacity restricts the type of traffic that can use the bridge. With an ADT of 6,583 vehicles per day, the bridge no longer provides the necessary community link that it once did. The bridge is a concrete slab that is in poor condition with heavy spalling revealing corroded reinforcement steel, especially near the deck drains. In addition, the substructure of the bridge is in poor condition with exposed, heavily scaled abutments. The channel rating is poor as a result of the alignment resulting in heavy scaling and pockets of undermining at the exposed north abutment. The existing safety features associated with the bridge do not meet PennDOT standards.

Funding for this project will be drawn down from the County Bridge Line Item (MPMS# 95447) at the appropriate time.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PROJECT MANAGER: TSS/S. New CMP: Not SOV Capacity Adding CMP Subcorridor(s): 5E

PennDOT Class: Bridge Restoration PennDOT Improvement: Bridge Restoration NHPP:

This project is a bridge rehabilitation/replacement of the County owned Hilldale Road bridge over Darby Creek in Lansdowne Borough and Upper Darby Township, Delaware County.

Delaware County Bridge #149, originally built in 1928, is a 92 foot two-span reinforced concrete T-beam bridge. The County is taking proactive action by replacing Hilldale Road Bridge due to the rapid deterioration of T-beam bridges in recent years. A lightly vegetated island is located downstream of the pier, and the east downstream banks are lined with gabion baskets that extend approximately 300 feet downstream. The island is forcing the flow towards the adjacent embankment. A traffic count performed in 2009 indicates an average daily traffic (ADT) of 2,379 vehicles per day.

Funding for this project will be drawn down from the County Bridge Line Item (MPMS# 95447) at the appropriate time.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Bridge Restoration **PennDOT Improvement:** Bridge Restoration **NHPP:**

This project is a bridge rehabilitation/replacement of the County owned South Avenue Road Bridge over Muckinipattis Creek (Mulford Bridge) in Glenolden and Norwood Boroughs, Delaware County.

Built in 1927, the existing South Avenue Bridge is a single span reinforced concrete slab bridge. The parapets over the structure are forty-inch high pigeonhole parapets with forty-inch high solid concrete parapets over the wing walls. The concrete structure has an overall span length of 20 feet with a weight restriction of 13 tons, except combinations of 24 tons. The bridge carries two lanes of traffic over Muckinipattis Creek and has a curb-to-curb width of 32 feet with 7' sidewalks on both the upstream and downstream sides. South Avenue approaching the structure has a 32 foot wide cartway with 6-inch curb and 4-foot sidewalk between Ridgeway Ave and Chester Pike (SR 13). There is existing sidewalk along South Avenue on the downstream side of the structure providing pedestrian access to Chester Pike, the sidewalk on the upstream side of the structure ends at the limits of the parapet wall.

Funding for this project will be drawn down from the County Bridge Line Item (MPMS# 95447) at the appropriate time.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Rail Highway Grade Crossing

PennDOT Improvement: Rail Highway Grade Crossing

NHPP:

The Main Street-CSX rail line grade crossing (US DOT #140641S) in Darby Borough needs to be updated and may include improvements such as new gates, lights, traffic signals (if warranted), drainage, and improvements to the crossing surface and roadway for all users at and around the grade crossing. This grade crossing currently poses significant safety concerns as it accommodates train traffic from a major interstate freight line throughout the day, vehicular traffic from two roads (Main St. and Sixth St.), and pedestrian traffic from nearby schools and retail establishments. Adding to the crossing's complexity is SEPTA's trolley route 11 that operates within the Main St. cartway and bisects the freight rail line (with trolley stops located on both sides of the grade crossing). The grade crossing was the subject of a two phase study conducted by DVRPC and overseen by a broad-based steering committee (see DVRPC publication #11012 and #12014).

This project was selected from the 2015 Pennsylvania Statewide Rail-Highway Grade Crossing Program for \$337,653 RRX funds.

LIMITS Copples Lane from Callender Lane to the existing walk at the Strath Haven Middle School

No Let Date

IMPROVEMENT Bicycle/Pedestrian Improvement

MUNICIPALITIES: Nether Providence Township

FC:

AQ Code:A2

PLAN CENTER:

IPD: 1

PROJECT MANAGER: EE/DVRPC/K. Lawrence

CMP:

PennDOT Class: Transportation Enhancement

PennDOT Improvement: Transportation Enhancement

NHPP:

The project will provide upgrades to Township's walkways and trails to improve pedestrian safety and encourage walking and biking. The new curb and sidewalk would run on the north side of Copples Lane from Callender Lane to the existing walk at the Strath Haven Middle School (a distance of about 2300 lineal feet) .

This will result in an interconnected network of trails for recreation and inter-modal access to public transportation (SEPTA Commuter Rail Line) and community destinations. A major purpose of these sidewalks is to improve safety for students walking to school because Copples Lane has been identified by DVRPC as a Hazardous Route to School and intersects Providence Road at the Middle School/High School complex, and students must currently walk in the street to get to the Strath Haven Middle School and Strath Haven High School.

December 11, 2014 - In summer of 2014, PennDOT held a competitive round of 2-years worth of funding. As a result, this project was one of 13 projects across the DVRPC region that received \$444,100 on 11/10/2014 through the statewide TAP program (MPMS #60560) out of the \$7.8 million awarded to the region. Statewide, PennDOT made \$33 million available for 56 projects across the state.

This project also received \$225,000 DVRPC Regional TAP funds (TAU) , under the title of Walkable Wallingford.

This project is for roadway improvements for the planned Langford Run Road development. This project includes: 1.) reconfiguring the SB I-476 off-ramp connections with PA 3 by removing the right-turn channelized slip lane and lengthening/repurposing the off-ramp thru lane to be a shared right-thru lane; 2.) signalizing and reconstructing the PA 3/Langford Run Road intersection by adding a WB left-turn lane (on PA 3) and extending the 3rd EB thru lane (on PA 3); 3.) signalizing and reconstructing the Lawrence Road/Langford Run Road intersection by adding a left-turn lane on Lawrence Road, and 4.) retiming traffic signals and installing an adaptive signal system along PA 3 and Lawrence Road.

The planned Langford Run Road development is on a 66.86 acre parcel in the southwest quadrant of the I-476 and PA 3 (West Chester Pike) interchange in Marple Township. Plans for future development include construction of 173,818 square feet of new retail/commercial space, a 108 room hotel with a restaurant, and 147 new town homes. Plans are being finalized and will include a combination of retail and residential uses. The overall estimated transportation construction cost of this project, is \$2,961,000, while the private development investment is estimated at \$121,400,000.

Funding is provided to complete the southeastern loop road, Applied Card Way, to connect US 202 and US 1 in Concord and Chadds Ford Townships. Construction also includes related sidewalks, lighting and pedestrian safety amenities. A completed loop road system will divert traffic from the Route 202/US 1 intersection.

This is a companion project to MPMS #95429.

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Aston Township seeks to improve safety and mobility at the following twelve (12) signalized intersections within the Township. All pedestrian crossings will be upgraded by installing high visibility ladder style crosswalks. Locations that utilize 8-inch signal heads or outdated Walk/Don't Walk heads for pedestrian control will be upgraded with LED countdown pedestrian signal heads, and several deficient locations will receive ADA compliant ramps and pedestrian push buttons. Faded or missing pavement markings within the signalized intersections will be improved with thermoplastic markings to improve visibility and durability, and missing signs will be replaced and various signage will be relocated to provide better protection from future knockdowns (i.e. placed overhead).

MUNICIPALITIES: Brookhaven Borough

FC:

AQ Code:NRS

PLAN CENTER:

IPD: 2

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Brookhaven Borough will upgrade all intersections to include generator transfer switches, battery back up units, upgraded pedestrian crossing mechanisms, GPS time reference units, and modernizing intersections based on future growth. The current intersections are in need of improvements to ensure they meet all PennDot standards. All intersections in the Borough will be equipped with battery backup systems to prevent loss of traffic signals during emergency situations. Intersections lack GPS timing mechanisms and need to have their timing adjusted to match PennDot approved timing. Installing pre-emption systems and video detection systems will improve the flow of traffic at critical intersections. Pedestrian push button mechanisms will be upgraded to ensure future operation.

The intersections are: Bridgewater Rd & Brookhaven Rd, Edgmont Ave & Brookhaven Rd, Edgmont Ave & Dutton Mill Rd, Edgmont Ave & Roberts Rd, Edgmont Ave & Trimble Blvd, Edgmont Ave & Whiteley Rd, Edgmont Ave & Coebourn Blvd.

Install 4 new video detection cameras to replace 6 stop bar vehicle loop detectors; Replace outdated controller with a new one; and install battery backup unit by-pass switch, batteries, cables and red LED indicator. Deteriorating road surface conditions on Route 202 have caused loop failure. Also, this critical intersection located on a major corridor, needs to always be operable. The plan is to install a battery backup unit and to update an aged controller (which can no longer be serviced).

IMPROVEMENT Signal/ITS Improvements

MUNICIPALITIES: Ridley Township

FC:

AQ Code:S6

PLAN CENTER:

IPD: 5

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Ridley Township wants to upgrade six existing traffic signal intersections along MacDade Blvd and Kedron Avenue to replace existing crosswalk aids with LED pedestrian crosswalk lighting systems. The intersections currently use pedestrian push buttons without pedestrian signals for intersection crossings. These push buttons are linked with their own Red-Yellow-Green traffic signal to give pedestrians additional time to cross when the push button is activated. The installation of pedestrian crossing lights provide added safety for all pedestrians crossing at these intersections, as well as providing motorists added safety by reducing the likelihood of pedestrians being in the intersection at inappropriate times. It has been considered previously to upgrade the intersections, but due to financial constraints, it has not been completed. This grant will provide additional funding needed to upgrade the intersections.

The intersections will be:Kedron Avenue and Academy Avenue -MacDade Blvd and Milmont Avenue -MacDade Blvd and Edgewood Avenue -MacDade Blvd and Swarthmore Avenue -MacDade Blvd and Amosland Road -MacDade Blvd and Holmes Road

PennDOT Improvement:

NHPP:

This project will improve two intersections in Middletown Township.

S. New Middletown Road (SR 0352) & Knowlton Road:

-Add southbound right-turn lane. Shoulder is currently used as a de facto turn lane, Volume density loops, Video detection, Install new pushbutton on the northwest corner to replace the one that was knocked down. Place towards back of landing area, Replace mast arm on northwest corner. (Pole must be replaced to add an additional overhead signal), New junction box on the northwest corner to replace the old, rusted, muddy, crowded one, Luminaires on northeast and southwest corners' mast arms, Overhead street name signs on side street mast arms, Install new ground mounted controller cabinet, Repair broken connection from controller cabinet to mast arm

S. New Middletown Road (SR 0352) & Glen Riddle Road/Elwyn Ave & Old Middletown Road:

-Provide two overhead signals for each approach, Upgrade pedestrian signals, Replace mast arm on southeast corner (necessary if we are adding an additional overhead signal), Overhead street name signs for side street mast arms.

PennDOT Improvement: Bridge Replacement

NHPP: Y

The Old York Road bridge must be replaced with a new structure and is a three span, concrete-encased, I-beam structure supported by reinforced concrete abutments and column pier bents. This structure carries five travel lanes (including one left turning lane) of PA Route 611 and two pedestrian sidewalks with a total structure width of 69' and structure length of approximately 113 feet. Signalized intersections are located at each approach to the bridge. The existing bridge was rated poor in an inspection report performed in 2003. The overall bridge is deteriorating. The abutment has wide cracks, severe scale and large spalls. The superstructure over the loading platforms are exhibiting spalls and heavy scale. There were two small holes noted in the sidewalk on the bridge.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PROJECT MANAGER: HNTB/N. Velaga

CMP: Minor SOV Capacity

CMP Subcorridor(s): 14E

PennDOT Class: Safety Improvement

PennDOT Improvement: Safety Improvement

NHPP: Y

This project involves the addition of turn lanes at the intersections of PA 73 (Church Road) and Greenwood Avenue. Left turn lanes will be added on Church Road and right turn lanes will be added on Greenwood Avenue. The traffic signals on PA 73 at Greenwood Avenue and Rice's Mill Road will be interconnected. Drainage in the area will be improved. The existing sidewalk on the east side of Greenwood going north from the intersection with Church Road will be maintained. Additional sidewalks can be considered if there is local support, including the willingness to be responsible for maintenance, and if the improvements can be made ADA compliant. However, the right-of-way constraints are significant, including the Curtis Arboretum and the Rabbinical College. The impacts of additional required right-of-way for bicycle or pedestrian facilities may cause cultural resource and/or community impacts that are not acceptable. These issues will be addressed as the project moves through the preliminary engineering phase into final design.

PennDOT Improvement: Bridge Replacement

NHPP:

This project consists of the replacement of the Church Road Bridge and approaches over the SEPTA Route 100 rail line (Norristown High Speed Line) in Upper Merion Township. The project includes widening of the bridge to meet current design standards for a two lane roadway with a pedestrian sidewalk on one side.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PROJECT MANAGER: TSS/GANNETT/S. New

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 9A

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP:

The new three-lane bridge will replace the existing closed bridge. It will have 5 foot shoulders on each side, a sidewalk on one side, and a total width of approximately 50 feet. There are no bike lanes on any of the approach lanes due to narrowness. Access to the nearby Perkiomen Trail is "Share-the-Road." The middle lane will serve as a turn lane for Arcola/Level Roads on the Lower Providence side (stop sign on bridge approach) and a turn lane, including a traffic signal, for the Arcola/Cider Mill approach on the Upper Providence side will be installed.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

Provide an adequate two lane roadway connection by upgrading two existing two lane roads (Wambold Rd. and Township Line Rd.) and connecting them with a two lane roadway approximately one mile in length. This project will correct the disjointed and inadequate road system serving the north/south movement between PA 309 and the PA Turnpike Lansdale Interchange. This project will proceed in 2 phases.

The Right-Sized Phase 1 Project includes the proposed realignment of Sumneytown Pike (PA 63) from Old Forty Foot Road to Freed Road and improvements to Wambold Road from Sumneytown Pike (PA 63) to Allentown Road. The proposed work includes a three lane relocation of PA 63 with shoulders (11' lanes and 8' shoulders) on Wambold Road and a two lane runaround around Mainland Village.

Phase II: This phase will extend Phase I from Allentown Rd on a new two-lane roadway, one mile in length, to connect to Township Line Rd at Godshall Rd. Township Line Rd will be upgraded and extended to a new interchange at PA-309 and County Line Rd.

SAFETEA DEMO #613, PA ID# 338 - \$1.280 MILLION. DEMO PA ID #206 - \$4,59,394.

This project involves rehabilitating or replacing the bridge carrying Edgehill Road over Old York Road. The work includes replacing the deck of the bridge and painting and the replacement of approach curb and sidewalk. The bridge carries a 2 lane road with sidewalks over a 4 lane road with sidewalks and a mountable median. The single span, 116'-long built-up steel through girder bridge is supported on horizontally scored concrete abutments with stepped modern style pilasters.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PROJECT MANAGER: EE/J. Brown

CMP: Major SOV Capacity

CMP Subcorridor(s): 8E, 9B

PennDOT Class: Additional Lanes

PennDOT Improvement: Additional Lanes

NHPP: Y

This project serves for the pre-construction phases of the Markley Street rehabilitation project for Section 500 of US 202 (SR 3020 and Norristown Borough Street) ; from approximately 700 feet south of Main Street (local street) to Johnson Highway (SR 3017) for a total length of approximately 8,500 linear feet; and on Johnson Highway (SR 3017) from Markley Street to Powell Street (local street) for a total length of approximately 2,200 feet. Between Main Street (local street) and Marshall Street (local street), Markley Street is a four-lane divided street with no parking permitted. Between Marshall Street and Johnson Highway (SR 3017), it is a two-lane street, with parking typically permitted on both sides. This parent project will incorporate all pre-construction phases (UTL and ROW) for MPMS# 80021 (Section 510) and 80022 (Section 520), which will be used for the respective construction contracts.

The scope also includes some operational improvements instead of strict road reconstruction by adding an extension of Barbadoes Street, in Norristown, between Lafayette Street and Washington Street to provide an eastern connection to Water Street and alleviate truck turning conflicts, for the Norristown Transfer Station, at the intersection of Water Street and Main Street. There is also an upgrade to the railroad grade crossings at Main Street and Marshall Street by installing new gates, signals and crossing surfaces and replacing existing traffic signals on Markley Street at the intersections of Main Street, Marshall Street and Elm Street.

In the DVRPC region, US 202 covers 61 miles, traversing 27 municipalities. It serves as a major commuter route and is a vital link for business and industry. For planning purposes, US 202 has been divided into seven major sections (100 through 700), and some of those sections have been broken down further to simplify construction management.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2011 annual memoranda on supplemental strategies for details related to this project.

PLAN CENTER: IPD: 0

PROJECT MANAGER: George Dunheimer ADE CONSTR **CMP: Not SOV Capacity Adding** CMP Subcorridor(s): 1A, 9B

PennDOT Class: Bicycle/Pedestrian PennDOT Improvement: Bicycle/Pedestrian NHPP: N

The new bridge which replaces the Old Betzwood vehicular bridge over the Schuylkill River will accommodate bicycles and pedestrians. This project will also provide for rehabilitation of the Trooper Road superstructure over Norfolk Southern railroad and replacement of the Trooper Road structure over the Schuylkill River Trail. Trails will also be constructed from the existing Montgomery County Schuylkill Trail to the new bridge and from the bridge to PA 23 in Valley Forge Park. This project is part of the Montgomery County Planning Commission recommended Trail Plan.

This trail project is intended for transportation purposes, including trips to public venues, businesses and services. This project will provide non-motorized transportation connections from residential communities (Riverview at Valley Forge, Valley Forge Crossing, Valley Forge Towers & Apartments) to major employment centers (King of Prussia Business Park, Valley Forge Corporate Center) and retail/service centers (King of Prussia Mall, Valley Forge Convention Center, Greater Philadelphia Expo Center) in Upper Merion, West Norriton and Lower Providence Townships. This project will also provide a connection between the north and south sides of the Valley Forge National Historical Park to minimize impacts of vehicular traffic within the National Historical Landmark.

This project is part (5) of the "River Crossing Complex," which is a complex area of roadways, interchanges, intersections, and bridges in and around the Valley Forge National Historic Park. Environmental clearance for various components was undertaken through MPMS #46954, and individual projects have been broken out as follows:

- 1) PA 23/US 422 Interchange and North Gulph Road Improvements (MPMS #66952).
- 2) US 422/PA 363 Interchange, including providing movements to/from the west (MPMS #64796) along with the Adams Ave west-bound off ramp. Provide west-bound on-ramp from PA 363 Trooper Road and west-bound off-ramp to Adams Avenue.
- 3) US 422 Exwy Bridge over the Schuylkill River, replacement of the existing bridge (MPMS #70197), and a new parallel four (4) lane bridge.
- 4) US 422 Widening for 1.8 miles from PA-363 interchange to the US-202 interchange. This project has not yet been broken out.
- 5) Old Betzwood Bridge Bike/Pedestrian Trail will be re-built as a bike/pedestrian bridge only, and will not re-instate vehicular traffic (MPMS# 16703).
- 6) An early action interim project to provide timely and effective relief to westbound afternoon congestion until the long range projects can fully advance was programmed and constructed as MPMS #74648.

The River Crossing complex projects have received the following Earmarks:
 2008 Appropriation (PA ID# 711) -\$735,000
 SAFETEA-LU (FED ID# 0020/PA ID# 672) -Originally \$20,000,000. Balance available \$3,120,779

PennDOT Class: Transportation Enhancement **PennDOT Improvement:** Transportation Enhancement

NHPP:

This project includes the development of a 3.5 mile extension of the paved trail. It is part of a larger effort to provide a cross-county trail from Chester County through Montgomery to Bucks County. This project is related to the TE funded Chester Valley Trail project that will be constructed from the Montgomery County Line (near King of Prussia) to Downingtown in Chester County. This project is part of the Montgomery County Planning Commission recommended Trail Plan.

The Chester Valley Trail Extension is intended principally for transportation purposes, including trips to work, school, retail, and services. The Extension (MPMS #16705) will link to the Chester Valley Trail (see MPMS #14663 and 14675), connecting residential communities with major employment, school, retail, and service centers in King of Prussia, Bridgeport and Norristown Boroughs as well as major employment, school, retail, and service centers in Great Valley and Exton. The Extension will also unite with the Schuylkill River Trail (SRT) in Norristown and through the SRT, link to trails into and through Philadelphia with eventual connections to the East Coast Greenway to provide an extensive trail network through the DVRPC region.

This project is part of The Circuit. The Circuit is a 750-mile interconnected network of multi-use trails spanning Greater Philadelphia with Philadelphia and Camden as its hub, and is included in DVRPC's Long-Range Transportation Plan. Circuit trails will generally meet minimum design standards (10-feet wide, paved, and separated from traffic) to reflect their intended use as the arteries of a dedicated regional non-motorized transportation system. Circuit trails located near and connecting to downtown Philadelphia are already used heavily for transportation purposes, and the implementation of the network will further encourage the surging growth of bicycle commuting in the region. At 2.3%, Philadelphia has the highest bike-to-work percentage of the 10 largest cities in the country according the 2013 American Community Survey.

PennDOT Class: Highway Restoration

PennDOT Improvement: Highway Restoration

NHPP: Y

The project involves roadway widening and capacity improvements along SR 63 (Welsh Road), SR 2007 (Norristown Road) and SR 152 (Limekiln Pike). Welsh Road and Norristown Road will be widened to a 5 lane section with center left turn lanes. The existing 3 lane section along Limekiln Pike will remain with some additional capacity improvements. The cross section will not provide shoulders. Concrete curbing will be installed. The intersections will be improved to include left turn lanes and some channelized right turn lanes. Some sidewalks are currently located within the project. 4' sidewalks with a 3' grass strip from face of curb are proposed through the project limits. New traffic signal upgrades are proposed for all three project intersections. Signalized intersections will include pushbuttons and hand/man indications.

Signal Replacements will take place at the following intersections: SR 63 (Welsh Road) and SR 2007 (Norristown Road); SR 63 (Welsh Road) and SR 152 (Limekiln Pike); and SR 2007 (Norristown Road) and SR 152 (Limekiln Pike).

Project limits are as follows:

SR 63-1000' south of Norristown Road intersection to 1200' north of Limekiln Pike intersection

SR 2007-850' west of Limekiln Pike intersection to 850' east of Welsh Road intersection

SR 0152-800' south of Norristown Road intersection to 750' north of Welsh Road intersection

SR 63 (Welsh Road)

Existing - 2 -12' lanes (varies) with turn lanes at intersections, 0-4' Rt. Shldr. (varies); 24.0'-44.0' Total Pavement width

Proposed - 3 - 11' lanes, 2-13' lanes adjacent to curb; 24.0'-59.0' Total Pavement width.

SR 2007 (Norristown Road)

Existing - 2 -12' lanes (varies) with turn lanes at intersections, 0-4' Rt. Shldr. (varies); 24.0'-44.0' Total Pavement width

Proposed - 3 - 11' lanes, 2-13' lanes adjacent to curb; 24.0'-59.0' Total Pavement width.

SR 152 (Limekiln Pike)

Existing - 2 -12'-18' lanes (varies) with some turn lanes at intersections, 0-8' Rt. Shldr. (varies); 24.0'-51.0' Total Pavement width

Proposed - 1 - 11' lane, 2-13' lanes (lane widths vary based on existing edge of pavement to remain); 24.0'-55.0' Total Pavement width.

Ridge Pike is a Montgomery County owned arterial. This project will reconstruct Ridge Pike to provide a center left turn lane to the existing four lane highway. Work includes pavement and drainage replacement; upgrading existing and adding new traffic signals including traffic signal interconnect, and adding sidewalks. The project extends from the PA Turnpike to Chemical Road. Two new Norfolk Southern Railroad bridges are proposed under a companion project, MPMS 92839, to be let and constructed concurrently with MPMS 48175.

This Section 600 of US 202 project is currently in final design, and contains design phase only. Improvements include widening US 202 from two to four or five lanes and intersection improvements at major intersections. The limits of Section 600 are from Johnson Highway to PA 309. See MPMS #'s 63491, 63486, and 63490 for construction sections.

In the DVRPC region, US 202 covers 61 miles, traversing 27 municipalities in Delaware, Chester, Montgomery, and Bucks counties. For planning purposes, US 202 has been divided into seven major sections (100 through 700), and some of those sections have been broken down further to simplify construction management.

CMP commitments include transit improvements, as well as pedestrian and bicycle improvements. See DVRPC's CMP 2008 Supplemental Project Status Memorandum for details.

This project will fund analysis and planning efforts by a system integrator to support the District 6 Regional Traffic Management Center (RTMC) activities, and the regional ITS and traffic management elements deployed and proposed along expressway and arterial corridors. This will involve planning phases with deployment as a separate effort. The system integrator will support defining any potential implementation and operational strategies, and assist in developing a comprehensive strategic deployment plan (including estimate costs) along the corridors. Tasks will include ITS design review (prepared by others), video and data sharing support, ITS reporting and equipment management, ITS maintenance coordination support, communications and fiber management system support, and other similar activities.

PennDOT Improvement: Congestion Reduction

NHPP: Y

Corridor/intersection improvements; realign off-set intersection:

- 1) Realignment of Meyers and Seitz Roads at SR 4014 - Currently, Meyers Road terminates at Seitz Road approximately 250 feet south of the intersection with SR 4014. Seitz and Meyers Roads will be realigned to best serve the predominant traffic movements between Meyers Road and SR 4014. The Seitz Road intersection with SR 4014 is currently two-way stop controlled. A new signal will be installed at the intersection of SR 4014 and Meyers Road as part of the proposed work. Seitz Road will then terminate at Meyers with a one-way stop controlled tee intersection.
- 2) Horizontal Realignment of Meyers and Otts Roads at the Miller/Bauman Roads intersection - Two horizontal curves in this area do not meet current geometric design criteria for 40 MPH Design Speed. Proposed realignment will meet current design criteria.
- 3) Vertical and Horizontal Realignment of Otts Road: A series of vertical curves east of the Miller/Bauman Road intersection do not meet current geometric design criteria for 40 MPH Design Speed. Topographic constraints require realignment to fit with the area topography, drainage ways, and existing residential driveways.
- 4) Otts Road Approach to the Intersection with SRs 4044 and 0029 - The Otts Road and SR 4044 approaches to SR 0029 are offset by approximately 100 feet. Both tee intersections are one-way stop controlled. As part of this project, Otts Road will be relocated to align opposite SR 4044 which will be widened to accommodate a left turn lane and the new four-way intersection will be signalized.
- 5) Plank Road Approach to the Intersection with SR 0073- Currently Plank Rd (SR 4044) ends at Skippack Pike (SR 0073) as a tee intersection. Plank Rd and SR 0073 will be widened but will not be realigned. A new signal will replace the existing one proposed for this intersection and a left turn lane will be added both to Plank Rd (SR 4044) and Skippack Pike (SR 0073). A flat area will be added along the westbound direction of Plank Road for a future sidewalk.

NHPP: N

Funding in FY15 and FY16 is for Accrued Unbilled Costs (AUC).

Project S.R. 1012 (Godshall Road/West Broad Street) extends approximately 700 feet to either side of Cowpath Road intersection between Station 13+50.00 (Segment 0030/Offset 4060) and Station 28+50.00 (Segment 0040/Offset 0679). Work on T-410 (Cowpath Road) will extend approximately 650 feet to the West and 560 feet to the East of the intersection with Godshall Road between Station 12+25.00 and Station 24+30.00.

The project includes widening for its entire length to provide left turn lanes at all approaches and dedicated right turn lanes from westbound T-410 (Cowpath Road) and from northbound S.R. 1012 Godshall Road. Also, included is the addition of 4' shoulder and resurfacing near the limits of work of all approaches as the proposed vertical and horizontal alignments meet the adjacent existing alignments.

This project involves realignment of S.R. 1012 (Godshall Road and West Broad Street) in order to remove the offset that currently exists between the two roads and along the path of the state route.

S.R. 1012 currently consists of 11' lanes with shoulders varying from 0'-2'. The proposed design is comprised of 12' travel lanes, with 10' left turn lanes, a 12' right turn lane on the northbound approach and 4' shoulders.

T-410 currently consists of 11' lanes with shoulders varying from 0'-2'. The proposed design is comprised of 12' travel lanes, with 10' left turn lanes, a 12' right turn lane on the westbound approach and 4' shoulders.

Shoulders are to be widened from the existing 0'-2' to a 4' minimum. .

There are currently no accommodations for pedestrians or bicycles. Proposed pedestrian accommodations include sidewalk along the west side of S.R. 1012 (West Broad Street), cross walks and islands with associated hand/man pedestrian signals, and additional sidewalk near the intersection along (S.R. 1012) Godshall Road

-There are no adjacent projects requiring coordination at this time.

This project also includes the replacement of two non-historical bridges. Their sufficiency ratings are as follows:

SR 1012 over Skippack Creek: 95.7

Proposed New Structure: Prestressed Adjacent Box Beam

SR 1012 over Tributary to Skippack Creek:46.6

Proposed New Structure: Single Cell Precast Arch

Two retaining walls will also be constructed. One is located on the north side of Cowpath road, just east of the West Broad Street (SR 1012) intersection. The second is located along the east side of West Broad Street on the ramp carrying westbound traffic on Cowpath to northbound West Broad.

The project includes one (1) new signalized intersection with eleven (11) LED signal heads and four (4) LED pedestrian indications. The intersection is at Cowpath Road (T-410) and West Broad Street (SR 1012)/Godshall Road (SR 1012). The intersection signal will be traffic responsive with the use of video detection. Remote access is not included in the design. This project precedes the current Regional ITS Architecture; therefore compliance is out of scope.

This project will implement a Unified Traffic Management and Signal Coordination Plan within the Pennsylvania Turnpike Northeast Extension (I-476)/PA 309 Corridor to handle both routine traffic conditions and diversions from the Turnpike. Video cameras, variable message signs, interconnected signal systems and trail blazer signage are components of the system. Work undertaken as part of the DVRPC FY06 Work Program provided signal inventories, cost estimates to make equipment consistent, identification of closed loop subsystems and priorities within the corridor, requirements for linking the system to PennDOT's Traffic Control Center, and a trail blazer signage plan.

MPMS# 71643 includes the utility work for the ITS components of this project and MPMS #48185 - ITS for I-76 Schuylkill Expressway.

This project is integral to the Delaware Valley Freight Corridors Initiative.

This project provides for the widening of US 202 for approximately 1.8 miles from two lanes to five lanes including a center turn lane in this section of US 202 between Johnson Highway and Township Line Road in Norristown Borough, East Norriton & Whitpain Twps. One bridge and one culvert will be replaced in this portion of Section 600. Traffic signal equipment will be replaced at the intersections with Johnson Highway, Germantown Pike and Township Line Road. This section is designed under Section 610. ITS elements are included in this project. MPMS #50364 (US 202 Sec 610) contains the final design funding for this project. See MPMS #'s 63491, 63486, and 63490 for construction sections.

In the DVRPC region, US 202 covers 61 miles, traversing 27 municipalities in Delaware, Chester, Montgomery, and Bucks counties. For planning purposes, US 202 has been divided into seven major sections (100 through 700), and some of those sections have been broken down further to simplify construction management.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 annual memoranda on supplemental strategies for details related to this project.

This project provides for the widening of US 202 for approximately 2.3 miles from two lanes to five lanes including a center turn lane in this section of US 202 between Township Line Road and Morris Road In East Norriton & Whitpain Twps. Intersections along the project will be improved by adding lanes where necessary on both the mainline and side roads to provide adequate intersection capacities. New traffic signals will be installed. A coordinated ITS and traffic signal operating system will be integrated into the project. Improvement will also take place at two offline intersections, North Wales Rd./Township Line Rd. and Arch Rd/Township Line Rd. to improve traffic flow through the area during construction. This section is designed under Section 610. MPMS #50364 (US 202 Sec 610) contains the final design funding for this project. See MPMS #'s 63491, 63486, and 63490 for construction sections.

In the DVRPC region, US 202 covers 61 miles, traversing 27 municipalities in Delaware, Chester, Montgomery, and Bucks counties. This project involves modifications to the intersection of SR 0309 (Bethlehem Pike) with SR 0463 (Horsham/Cowpath Road) and SR 2202 (Doylestown Road) in Montgomery Township, Montgomery County, Pennsylvania. Improvements to the intersection, commonly referred to as the "5 Points Intersection", will include the installation of additional thru lanes and minor widening on several legs, as well as the retiming of the existing traffic signal. Other improvements will include modifications to the existing drainage system, replacing the existing traffic signal support structures, adjusting several existing driveways to accommodate additional lanes, and upgrading the signing and pavement marking. Work along SR 0309 will extend approximately 430 m. (1411 ft.) north of the intersection and approximately 320 m. (1050 ft.) south of the intersection; along SR 0463 will extend approximately 460 m. (1508 ft.) east of the intersection and 245 m. (804 ft.) west of the intersection; along SR 2202 will extend approximately 80 m. (262 ft.) north of the intersection. Both signal support structures will be replaced.

Located in West Norriton and Lower Providence Townships, this project will provide a full-movement interchange at US 422/PA 363. This includes a US 422 eastbound off-ramp to PA 363, a US 422 westbound on-ramp from PA 363, and modifications to the existing ramps as necessary. This project also includes improvements to the Trooper Road (PA 363)/Audubon Road intersection.

This project is part (2) of the "River Crossing Complex," which is a complex area of roadways, interchanges, intersections, and bridges in and around the Valley Forge National Historic Park. Environmental clearance for various components was undertaken through MPMS #46954, and individual projects have been broken out as follows:

- 1) PA 23/US 422 Interchange and North Gulph Road Improvements (MPMS #66952).
- 2) US 422/PA 363 Interchange, including providing movements to/from the west (MPMS #64796) along with the Adams Ave west-bound off ramp. Provide west-bound on-ramp from PA 363 Trooper Road and west-bound off-ramp to Adams Avenue.
- 3) US 422 Exwy Bridge over the Schuylkill River, replacement of the existing bridge (MPMS #70197), and a new parallel four (4) lane bridge.
- 4) US 422 Widening for 1.8 miles from PA-363 interchange to the US-202 interchange. This project has not yet been broken out.
- 5) Old Betzwood Bridge Bike/Pedestrian Trail will be re-built as a bike/pedestrian bridge only, and will not re-instate vehicular traffic (MPMS# 16703).
- 6) An early action interim project to provide timely and effective relief to westbound afternoon congestion until the long range projects can fully advance was programmed and constructed as MPMS #74648.

The River Crossing complex projects have received the following Earmarks:

- 2008 Appropriation (PA ID# 711) -\$735,000
- SAFETEA-LU (FED ID# 0020/PA ID# 672) -Originally \$20,000,000. Balance available \$3,120,779
- TEA-21 (FED ID# 0140/PA ID# 088) -\$1,019,806

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2010 and 2011 annual memoranda on supplemental strategies for details related to this project.

This project involves rehabilitating or replacing a borough owned, through girder type bridge. The bridge currently has one sidewalk. This project is subject to standard PENNDOT design procedures as defined in the Bicycle/Pedestrian Facilities checklist. The bicycle and pedestrian checklists will be incorporated into the project. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Improvement: Highway Reconstruction

NHPP: N

This project will relocate PA 23 and North Gulph Road in the vicinity of the PA 23/US 422 interchange. This project includes relocating PA 23 and N. Gulph Road to improve operations and reduce traffic impacts within Valley Forge National Historic Park with full mitigation buffer zone. In addition, relocation improvements will be made to North Gulph Road in order to provide the opportunity for a new "gateway" for the Valley Forge National Historic Park. The roadway will be moved approximately 300 feet to the east of the park entrance.

This project is part (1) of the "River Crossing Complex," which is a complex area of roadways, interchanges, intersections, and bridges in and around the Valley Forge National Historic Park. Environmental clearance for various components was undertaken through MPMS #46954, and individual projects have been broken out as follows:

- 1) PA 23/US 422 Interchange and North Gulph Road Improvements (MPMS #66952).
- 2) US 422/PA 363 Interchange, including providing movements to/from the west (MPMS #64796).
- 3) US 422 Exwy Bridge over the Schuylkill River, replacement of the existing bridge (MPMS #70197), and a new parallel four (4) lane bridge and relocation of PA 23 eastbound off-ramp as an expressway fly-over.
- 4) US 422 Widening for 1.8 miles from PA-363 interchange to the US-202 interchange. This project has not yet been broken out.
- 5) Old Betzwood Bridge Bike/Pedestrian Trail will be re-built as a bike/pedestrian bridge only, and will not re-instate vehicular traffic (MPMS# 16703).
- 6) An early action interim project to provide timely and effective relief to westbound afternoon congestion until the long range projects can fully advance was programmed and constructed as MPMS #74648.

The River Crossing complex projects have received the following Earmarks:

2008 Appropriation (PA ID# 711) -\$735,000

SAFETEA-LU (FED ID# 0020/PA ID# 672) -Originally \$20,000,000. Balance available \$6,864,799

TEA-21 (FED ID# 0140/PA ID# 088) -No funds remain.

Streetscape improvements are proposed along York Road (SR 263) between Horsham Road and Summit Avenue to reestablish the Hatboro downtown and commercial centers by improving pedestrian facilities and safety. Improvements will consist of gateway signage, street lightning, street trees, brick and/or textured crosswalks, benches, trash receptacles and landscaping.

The Home Town Streets/Safe Routes to School (HTSSRS) programs are intended to improve the quality of life in our communities. Projects aim to encourage reinvestment in and redevelopment of our downtowns, and to establish safe walking routes for children to commute to school where feasible.

This project was recommended in the spring of 2005 for funding through the HTSSRS program. \$800,998 funding will be drawn from MPMS #64984 at the appropriate time.

SAFETEA DEMO 109, PA ID #308 - \$1 MILLION DEMO has been broken out to MPMS #74817 for use on this project.

The PA 63/PA 309 Connector Project is intended to create an improved connection between PA 63 (near the Lansdale Interchange of I-476) and PA 309 (near the southern terminus of the Sellersville Bypass) in Bucks County. Phase 1, which created a bypass around Mainland village in Montgomery County and reconstructed and widened Wambold Road from PA 63 (Sumneytown Pike to Allentown Road, was carried under MPMS #16438.

Phase 2 will include the following improvements:

- Extend Wambold Road past its current end at Allentown Road up to the intersection of Cowpath Road and Township Line Road;
- Reconstruct and widen Township Line Road from Cowpath Road to Souderton Pike;
- Realign and signalize the intersection of Penn Street and Township Line Road;
- Signalize the intersection of Township Line Road and Souderton Pike.

Phase 3 will reconstruct and widen Township Line Road between Souderton Pike and the Sellersville Bypass and is listed under MPMS #105803.

Project CMP (Congestion Management Process) commitments include signal and intersection improvements, turning movement enhancements, accommodations for pedestrians and bicyclists, coordination with SEPTA, and outreach to employers to promote transportation demand management strategies. See DVRPC's 2016-2017 memorandum on supplemental strategies for details related to this project.

NHPP: N

This project (Section MGN) will reconstruct and widen existing Lafayette Street from 2 to 4 lanes between Barbados and Ford Streets, as well as provide turn lanes and upgrade signals.

This project is a component of a much larger project aimed at extending Lafayette Street past its current terminus at Ford Street to Diamond Avenue. In addition to the proposed new roadway, the existing Schuylkill River bike/pedestrian trail will be realigned as a multi-purpose trail for public access and recreational use as part of the project. Further, the long term goal is to construct an interchange at the Dannehower Bridge/Lafayette Street intersection as well as an all electronic interchange with the Pennsylvania Turnpike. With an overall construction estimate of approximately \$115 million, this project has been broken down into several sections for construction management. See MPMS #'s 79863, 79864, and 79928.

Earmarks made available for the Lafayette Street Extension Projects:

TEA 21 DEMO -\$10 million

2004 DEMO - \$750,000

SAFETEA DEMO #4809, PA ID# 619 - \$500,000

SAFETEA DEMO #91, PA ID# 306 - \$9.120 MILLION

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2010 and 2012 annual memoranda on supplemental strategies for details related to this project.

This project provides for reconstruction and signal improvements to Route US 202, from Main Street from Harding Blvd. Improvements include the reconstruction of the existing four-lane cross-section, which will involve replacement of the existing "Bailey Bridge" carrying the northbound lanes over Stony Creek and replacement of the box beam structure carrying the southbound lanes over Stony Creek. In general, the roadway reconstruction will take place within the existing roadway footprint or will involve minor widening. More significant widening will occur at the intersection with Main Street to provide two northbound left turn lanes from Markley Street to Main Street. Total pavement reconstruction will occur. Corridor-wide improvements will include traffic signal upgrades at the six signalized intersections, highway lighting, and pedestrian accommodations (including pedestrian signals, sidewalks, crosswalks, and bump outs).

This project is the construction work broken out from MPMS #16665, which incorporates all pre-construction phases (UTL and ROW) for MPMS# 80021 (Section 510) and 80022 (Section 520), companion project.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2011 annual memoranda on supplemental strategies for details related to this project.

This project provides for reconstruction and signal improvements to Route US 202, from Harding Blvd to Johnson Highway. Improvements include the reconstruction of the two-lane cross-section between as a three-lane roadway, with one northbound lane, one southbound lane, and one two-way left turn lane. The roadway widening will follow the existing alignment. Total pavement reconstruction is anticipated.

The improvements along Johnson Highway will primarily involve pavement marking and signing, and will include some widening at the intersection with Markley Street and radius improvements at local roadways. Corridor-wide improvements will include traffic signal upgrades at the six signalized intersections, highway lighting, and pedestrian accommodations (including pedestrian signals, sidewalks, crosswalks, and bump outs).

This project is the construction work broken out from MPMS #16665, which incorporates all pre-construction phases (UTL and ROW) for MPMS# 80022 (Section 510) and 80021 (Section 520), companion project.

This project involves the total reconstruction of 4.1 miles of I-476 from the Schuylkill Expressway (I-76) to the Mid-County Toll Plaza of the Pennsylvania Turnpike (I-276).

In general, the existing roadway consists of 3-12' lanes, with 10' wide outside shoulders and predominately 4' wide paved inside shoulders each way. The purpose of this reconstruction is to replace the pavement and rehabilitate six (6) dual mainline bridges and one (1) overhead bridge. Major tasks will include roadway reconstruction, shoulder widening, sinkhole remediation, signing upgrades, acceleration/deceleration lane upgrades, drainage improvements, and bridge rehabilitation work.

Components of this project have already been advanced under MPMS #'s 77523, 83603, 83606, and 16737. Total roadway construction estimate is \$87 million.

NHPP:

This project includes the replacement of the bridge superstructure carrying Limekiln Pike over the SEPTA Lansdale/Doylestown Line. The existing structure is a single span adjacent concrete box beam structure that is approximately 76 feet long and 58 feet wide. The project will be constructed under traffic, maintaining one lane in each direction. The proposed bridge superstructure will also be 58 feet wide. The existing roadway has two 11 foot lanes and two 13 foot lanes and two 4 foot sidewalks and two protective exterior walls due to the electrified powerlines for SEPTA. Utility lines above the sidewalk may need relocation to facilitate construction. Protection of SEPTA catenary and transmission lines will be required. Construction operations will need to be coordinated with SEPTA to not impact the Lansdale/Doylestown Line services.

Reconstruction of 1.2 miles of expressway on both existing and new alignments meeting current design standards for horizontal radii, shoulder widths, and vertical clearance. SR 0422 will be reconstructed with a 9 foot left shoulder, 2-12 foot lanes, and a 12 foot right shoulder in each direction of travel. A concrete glare screen will be provided for physical separation between eastbound and westbound traffic. This project involves reconfiguration of the "S-curve" (high crash rate area) and Stowe Interchange. The Stowe Interchange will be realigned from the existing Trumpet configuration with tight loop ramps to a Diamond configuration. The horizontal radii comprising the Stowe "S-curve" will be increased to meet current design standards including stopping sight distance. The bridge carrying Ramp XY over SR 0422 at the Stowe Interchange will be reconstructed with the realigned interchange and will provide 16'-6" of vertical clearance with SR 0422. Structural improvements also include the replacement and extension of a culvert. PE is funded under MPMS 14698 and FD and ROW are funded under MPMS 66986. Also see MPMS #s 14698, 16738, 64220, 64222, 66986. SAFETEA DEMO # 1202 \$1.2 MILLION.

PennDOT Improvement:

NHPP:

Eight (8) structurally deficient bridges in Chester County and Montgomery County will be rehabilitated. Improvements are to include four (4) bridge deck replacements, two (2) bonded concrete overlays, one (1) bituminous deck overlay, and one (1) steel truss rehabilitation, all with minimal roadway improvement. Estimated service life extensions of fifteen (15) years for rehabilitation and forty (40) years for deck replacement are anticipated.

The bridges are as follows:

Chester County

- 1) Boot Road over PA 100 Bypass (Bridge Key 10402) Deck Replacement in West Whiteland Township;
- 2) South Whitford Road over Valley Creek (Bridge Key 10547) Deck Replacement in West Whiteland Township;
- 3) Ross Fording Road over Octoraro Creek (Bridge key 10518) Steel Truss Rehabilitation in West Fallowfield Township;

Montgomery County

- 4) Welsh Road over Norfolk Southern (Bridge Key 27176) Deck Replacement in Upper Dublin Township;
- 5) Easton Road over Branch Pennypack Creek (Bridge Key 27505) Bonded Concrete Overlay in Upper Moreland;
- 6) Easton Road over PA Turnpike Ramp AB (Bridge Key 27506) Bonded Concrete Overlay in Upper Moreland Township;
- 7) Quakertown Road over Branch Macoby Creek (Bridge Key 27572) Bituminous Deck Overlay in Upper Hanover;
- 8) Linfield Road over Norfolk Southern (MP 34.71), (Bridge Key 27819) Deck Replacement in Limerick Township;

Work to be performed will additionally include District-wide "On-Demand" bridge repairs. The scope of work will not change the typical section of the roadways or increase their capacities. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Environmental Determination Documentation clearance.

PennDOT Improvement: Bridge Restoration

NHPP:

This project will replace and widen two bridges carrying Ridge Pike, a Montgomery County owned arterial, over Norfolk Southern railroad tracks in Plymouth Township between PA Turnpike and Carland Road. It also includes constructing a new pedestrian bridge over Norfolk Southern immediately adjacent to the highway bridges to provide a sidewalk on Ridge Pike. Both existing bridges over the railroad are structurally deficient. This is a companion project to MPMS #48175. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Transportation Enhancement **PennDOT Improvement:** Transportation Enhancement

NHPP:

This is a road diet project along the entire length of First Avenue from N. Gulph Road to Allendale Road by reducing the number of travel lanes while maintaining acceptable vehicular traffic operations, which will allow excess existing paved roadway to provide improved facilities for other users such as bicyclists, pedestrians and transit users. Work will also involve converting the entire length of First Avenue from four (4) through lanes with no auxiliary left-turn or right-turn lanes to a three (3) lane configuration with one through lane in each direction and a center two-way left-turn lane and areas of painted median to facilitate movements into the existing commercial and office driveways along the roadway. The remaining roadway area will be converted to 5 foot bicycle lanes on each side of the road. Additionally, a mid-block raised pedestrian crosswalk including pedestrian signals, signs and markings will be provided. The crosswalk treatments will be designed to maximize pedestrian safety and will include advanced in-street yield to pedestrian markings accompanied by overhead flashing beacons and high visibility markings.

December 11, 2014 - In summer of 2014, PennDOT held a competitive round of 2-years worth of funding. As a result, this project was one of 13 projects across the DVRPC region that received \$430,856 on 11/10/2014 through the statewide TAP program (MPMS #60560) out of the \$7.8 million awarded to the region. Statewide, PennDOT made \$33 million available for 56 projects across the state.

PennDOT Class: Transportation Enhancement **PennDOT Improvement:** Transportation Enhancement

NHPP:

Funds will provide for the reconstruction of Virginia Drive from west of Camphill Road to Office Center Drive in the Fort Washington Office Park to provide a three lane Road Diet cross section as opposed to the existing four lane section. Removal of the fourth lane allows for construction of a multi-use trail between the Highland and Camphill Athletic Complex and the existing termination point of the multi-use trail on Virginia Drive. This trail construction will cover the 0.5 mile missing section of the regional Cross County trail by linking Virginia Dr. with trails along Camphill Road, Highland Avenue, and the Montgomery County Bike Lane network. Lastly, two undersized culverts will be replaced during roadway reconstruction; the intersection with Camphill Road will be signalized; fence will be installed along Pine Run Creek; and project will include minor drainage elements and minor utility relocation.

Currently, the trail system of Fort Washington Office Park (FWOP) is disjointed; culverts are undersized and roadway geometry is substandard at Camphill Road. This area is routinely flooded, traffic calming is required to control speeding, and bikes and pedestrians lack adequate dedicated areas and safety improvements that are required to address over 130 crashes in the past 20 years.

December 11, 2014 - In summer of 2014, PennDOT held a competitive round of 2-years worth of funding. As a result, this project was one of 13 projects across the DVRPC region that received \$1,000,000 on 11/10/2014 through the statewide TAP program (MPMS #60560) out of the \$7.8 million awarded to the region. Statewide, PennDOT made \$33 million available for 56 projects across the state.

PROJECT MANAGER: George Dunheimer ADE CONSTR **CMP:**

PennDOT Class: Bridge Restoration **PennDOT Improvement:** Bridge Restoration

NHPP:

Troxel/Orvilla Road over the West Branch of the Neshaminy Creek is a stone arch bridge that was closed on March 16, 2015. The proposed scope of work includes reconstruction of the spandrel walls and the wingwalls as needed, excavation and replacement of the arch backfill with lightweight concrete, and the reconstruction of the stone masonry parapets with reinforced concrete cores tied to a full-width moment slab. A moment slab is a type of support for a structure to assure the structure does not rotate. The approach and bridge roadway will be resurfaced and guiderail attachments replaced. The project also includes the installation of scour protection measures. The improvements will strengthen and restore the structure to a non-structurally deficient status.

IMPROVEMENT Signal/ITS Improvements

MUNICIPALITIES: Cheltenham Township

FC:

AQ Code:NRS

PLAN CENTER: Town Center

IPD: 4

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

This project involves the installation of GPS time clocks at six intersections in the Limekiln Pike / Easton Road corridor to improve the coordination of signals in downtown Glenside. This project could also be coordinated with two signals in Abington Township. The Limekiln Pike corridor between the Arcadia/Mt Airy exit of Route 309 and Glenside is frequently traveled and is often congested, particularly in the area of Glenside Avenue and the three signals between the 309 ramps and Church Road. Township staff and PennDOT review has determined that better coordination of the traffic signals in this corridor will improve the performance of these intersections. PennDOT representatives suggest that the installation of GPS time clocks will help ensure that any retiming efforts for this corridor do not drift and coordination remains in effect. The intersections proposed in this grant will be coordinated with retiming efforts on Easton Road between Glenside Avenue and Royal Avenue, in addition to Limekiln Pike and Willow Grove Avenue and two intersections in Abington (Limekiln/Edge Hill and Limekiln/Mt. Carmel).

This project involves the upgrade of two intersections to improve pedestrian and ADA accessibility. The improvements at Limekiln Pike and Church Road will address the need for blind pedestrian accommodations, improve ADA compliance of push buttons, and provide signs related to the number of pedestrian crossings at the intersection. The scope includes: additional Type B push button posts in each corner and associated conduit, accessible pedestrian signals, relocation of no turn on red signs and new pedestrian ahead signs for the intersection. At Limekiln Pike and Easton Road, improvements will involve upgrading the current Accessible Pedestrian System (APS) and providing Type B push button posts. These improvements, in conjunction with the work scoped in our grant application to improve the GPS time clocks in the Limekiln Pike/Easton Road corridor, will go a long way to improve pedestrian and vehicular circulation in the area.

The Township desires to add three (3) adaptive signal installations to a system of three (3) adaptive signals, bringing the total system to six (6) intersections. The adaptive operation in this area is required to facilitate the safe and efficient flow of traffic through a constrained roadway network. Additionally, the township will upgrade failed vehicle detection at number of signalized intersections to video detection. This modification will restore actuated operation to these locations, yielding significant reduction in delay and queueing during peak and off-peak hours. The township will replace a large number of failed communication switches that were originally installed by a PennDOT signal interconnect project, which will restore communications between the PennDOT District 6-0 Regional Traffic Management Center (RTMC) and the Township's signal systems along Lancaster Avenue (SR 0030), Conshohocken State Road (SR 0023), and Montgomery Avenue.

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

The proposed project will replace existing, aged LED bulbs at five of the eleven signalized intersections located along S.R. 0063 (Main St.) within Lower Salford Township. The five intersections selected as part of this project have not been upgraded in some time and have some of the oldest traffic signal equipment in the Township. The LED traffic signals installed at these intersections are all over 10 years of age. The age of these lenses have exceeded their standard life expectancy and are overdue for replacement. Studies indicate that LED lenses have an increased probability of failure and are subject to a degradation in intensity over time, sometimes falling below the ITE thresholds.

The Borough desires to modernize two (2) antiquated signalized intersections to meet current standards along Main Street, which carries an ADT of approximately 13,000-15,000 vehicles. Work will include new mastarms, overhead signal heads, pedestrian signal heads with APS, and video vehicular detection. The project locations are currently utilizing antiquated signal equipment and structures, and are operating in a fixed-time mode, which results in unnecessary delay to pedestrian and vehicle traffic. The proposed project will upgrade both the physical equipment, and improve the safety and efficiency of the operation by implementing new traffic signal structures (mastarms), LED signal heads, hand/man pedestrian signal heads with countdown timers, and video detection to facilitate actuated operation.

PLAN CENTER:

IPD: 2

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

This project consist of modernization of the exiting traffic signal equipment by replacing the existing pole mounted traffic controller assembly with a new base mount traffic signal controller assembly, with uninterruptable power supply and emergency backup generator plug. Replace the existing vehicle loop detectors with video detectors and dilemma zone detection. Optimize the traffic signal operation timing, phasing and time of day operation. The Allentown Road (SR 1001) and Fretz Road/Derstine Road traffic signal is one of the oldest installations in Towamencin Township. It was installed in 1992 and has not seen any major upgrades. This signal has experienced loop detection failures that require the signal to cycle to the side streets even if there are no vehicles present, causes traffic back-ups and congestion on the Allentown Road. The loop detector failures not only impact the operation of the traffic signal and traffic flow but also add to the township's annual maintenance expenses. This intersection also has no back-up power source or ability to run an emergency back-up generator, which leaves the signal inoperable during power outages posing a hazard to motorists traveling through the intersection.

PROJECT MANAGER: Daniel Farley

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

This project includes the upgrade of LED signal heads along all of the intersections along state highways within Upper Providence Township, with the exception of some intersections along Egypt Road, which have recently been upgraded as part of a development project. Upper Providence Township installed LED signal heads throughout the Township over several years, with the final installation occurring more than five years ago. These were first generation LED signals and some of the individual pixels within several of the signal heads are no longer working properly, which reduces the visibility of the overall signal head. The overall life expectancy of these first-generation signals is five to seven years old, which indicates that the currently installed LED heads are approaching the end of their useful life. It is time to upgrade the previously installed LED signals. The Township would like to upgrade the LED heads throughout the Township to improve their visibility.

Intersection improvements at two intersections as follows:

1)Township Line Rd. (SR 3001) and Arch Rd. (T-367): proposed work includes widening of the western approach of Township Line Rd. to provide a dedicated right turn lane, widening of Arch Rd. to provide left turn lanes on both approaches, install new signals and ADA compliant pedestrian facilities, new pavement markings, update signing and drainage within the project limits.

2)Township Line Rd. (SR 3001) and North Wales Rd. (T-377): proposed work includes widening of Township Line Rd. to provide left turn lanes on both approaches, install new signals and ADA compliant pedestrian facilities, new pavement markings, update signing and drainage within the project limits.

This project is a construction breakout from MPMS# 50364 (Section 610). Pre-construction phases were advanced under MPMS# 50364 for FD phase, and MPMS 63490(Section 61N) for ROW and UTL phases.

Phase 1 of the Powerline Trail is a 10 foot multi-use trail connecting an existing and heavily used US 202 Parkway Trail with the Township Building as well as the Township's newly constructed Community and Recreation Center. This trail is a Primary Trail in "The Circuit." This will not only connect one of the region's spine trail corridors with the community center, it will also improve safety at several major road crossings for trail users. Important destinations exist along the proposed route including the Montgomery Township Municipal Building and the Montgomery Township Police Department. It will provide a first class multi-use trail to a large concentration of Montgomery Township's population connecting the new Township's Community & Recreation Center as well as the US 202 Parkway Trail.

Project was awarded \$850,000 regional TAP (TAU) funds from the 2016 TAP round, which was approved by the March 24, 2016 DVRPC Board. Approximately \$7.6 million was available for the five-county Southeastern Pennsylvania region.

NHPP:

Cheltenham Township is applying for an ARLE grant in the amount of \$83,597 for a \$98,350 project to make pedestrian improvements at the intersection of Glenside Avenue and Rices Mill Road. The project will include design and installation of the improvements, to include the upgrade of ADA ramps, installation of crosswalks, and installation of pedestrian signals.

Cheltenham Township is pursuing the project at the request of local residents who desire a safe way to cross the intersection to access the recreational, commercial and other neighborhood attractions in the immediate area. Due to the geometry of the intersection and lack of pedestrian facilities, crossing this intersection on foot is not safe. The Township completed a study of this intersection through the Local Safe Roads Communities Program, which confirmed that this intersection does have safety issues when it comes to pedestrian accessibility, and recommends improvements to the pedestrian facilities at this intersection.

PROJECT MANAGER: Jim Mosca

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Montgomery County is seeking to promote reinvigorated business centers along the Pennsylvania Turnpike corridor via expanded access to the highway. In 2015, Montgomery County Planning Commission staff completed its Turnpike Corridor Reinvestment Project. The study's vision included providing seven new or modernized interchanges. All are identified in the current DVRPC Long-Range Plan for the Year 2040. New interchanges—proposed at Henderson Road, in Upper Merion Township, and at Welsh Road (PA 63), in Upper Dublin and Upper Moreland Townships—are not funded in the current Plan.

New activity in the business parks is likely to generate additional traffic volumes. New traffic on the Turnpike will add revenue. Expanded accessibility to the regional highway will reduce traffic at existing toll plazas, but introduce it on busy arterials where new toll plazas are proposed.

DVRPC supported the Reinvestment Project by producing Year 2040 daily travel demand forecasts for its conceptual engineering / interchange design content. The proposed project will evaluate peak hour traffic conditions in the vicinity of the new interchanges to: inform the public and municipal decision makers of the likely impacts, identify localized transportation improvements to ameliorate identified problems, and build support with the funding agencies.

The project is being undertaken as a two year effort. Year one (FY'18) will be devoted to data collection and regional travel demand forecast modeling (VISUM) surrounding both interchanges. Current, 2045 No-Build, and 2045 Build conditions will be modeled. Year two (FY'19) will include traffic operational modeling (VISSIM) of each scenario to assess peak hour traffic conditions and needs. Public workshops or open houses will be held in each phase for each interchange study area.

The consultant will provide for the necessary arterial traffic signals/ITS design elements to supplement the I-76 Integrated Corridor Management Project. This project will develop all of the necessary design and construction documentation needed to modernize the traffic signal systems and ITS devices in Montgomery County based on the I-76 Traffic Signal Management Plan. Memorandum of Understanding (MOU) Agreement, concept of operations and system engineering report completed under different agreements. The targeted corridors include: Ridge Pike, Route 23, Swedeland Road, Route 320, U.S. 202/DeKalb Pike, South Gulph Road, Henderson Road, Fayette Street.

This agreement includes but is not limited to data collection, traffic analysis, preliminary engineering, environmental clearances, final design, plan development, PS&E requirements, right-of-way acquisition services and consultation during construction. Also as indicated under services, coordination and collaboration is required with the following other agreements:

- E03582 - Green Light-Go Technical Support - Southeastern Region
- E03803 -76 Integrated Corridor Management Project
- E03919 - Comprehensive ATMS of I-76 Parallel Arterial Corridors Design Support Agreement (Philadelphia County)
- E03920 - District 6 Transportation Systems Management and Operations (TSMO) Support Contract
- Other ECMS, Highway Occupancy Permit (HOP) or Municipal Projects identified by the Department

The consultant will manage the consultant project team with routine project status meetings to identify the next steps of the project. It is anticipated that this agreement will work concurrently with the agreements identified above.

NHPP:

This project involves the rehabilitation or replacement of the Coulter Street (S.R. 4011) bridge over SEPTA, in the City of Philadelphia, Philadelphia County, Pennsylvania. This roadway is a vital local connector for the surrounding communities and is also on SEPTA's Bus Route K. The existing structure is a steel riveted thru girder superstructure founded on masonry abutments. The deck and superstructure of the bridge have been rated to be in poor condition with the substructure rated to be in fair condition. The bicycle and pedestrian checklists will be incorporated into the project. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

NHPP:

This project will extend Adams Avenue (SR 1026), which is located east of Tacony St. and south of Torresdale Avenue, to Aramingo Avenue and ramps constructed as part of the I-95, Delaware Expressway at Betsy Ross Bridge Interchange project. The extension will provide a connection between Torresdale Avenue and Aramingo Avenue and I-95 at the Betsy Ross Interchange. It will be a new roadway that is one lane per direction, but it will widen out towards the Betsy Ross Interchange to accommodate additional turn lanes, etc. There will be traffic signals at Torresdale Avenue and Aramingo Avenue. Adams Avenue will pass under the AMTRAK bridge, but no bridge work is anticipated. The exact limit at the interchange will be determined by the Section BRI/BSR projects and how they complete the interchange. Additionally, the parallel portion of the Frankford Creek Greenway will be constructed adjacent to the Adams Avenue Connector.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2012 annual memoranda on supplemental strategies for details related to this project.

PennDOT Class: Bridge Restoration

PennDOT Improvement: Bridge Restoration

NHPP: Y

The purpose of the project is to maintain safe and efficient transportation access to serve existing and future transportation needs associated with Center City Philadelphia. Eight (8) total bridges will be rehabilitated. The four (4) structurally deficient or functionally obsolete Chestnut St. bridges are over 30th Street Lower and I-76 (Schuylkill Expressway), the Schuylkill River, the CSX freight railroad line that lies east of the Schuylkill River, and 24th St. The project also includes Schuylkill Avenue West bridges over I-76 between Market Street and Walnut Street (2 structures), plus Ramp A and Ramp B (off and on ramps to I-76, 2 structures).

(1) The Chestnut St. Bridge over the 30th Street Lower is part of the 11-span bridge mainly built in 1932 that also carries Chestnut Street over the AMTRAK railroad and I-76. The bridge is composed of 11 simple spans of non-composite steel built-up stringers supported on steel built-up column bents. This project includes rehabilitation to spans 1, 2, and 11. The bridge is not individually eligible for listing in the National Register, but is recommended as a contributing resource to the 30th Street Station Historic Site. Spans 3 to 10 were recently rehabilitated under MPMS #64844, SR 3010, Section PRR (30th Street Bridges (6 structures) Over Amtrak's Northeast Corridor Rail Lines).

(2) The Chestnut St. Bridge over the Schuylkill River was built in 1912, replaced in 1958, and rehabilitated in 1983. The bridge is a two span continuous deck riveted girder bridge superstructure with deep riveted floorbeams and rolled stringers. Two additional simple approach spans also exist with similar superstructure type. The proposed work includes deck replacement, replacing bearings, painting the superstructure, and substructure repairs. The bridge is not eligible for listing in the National Register.

(3) The Chestnut St. Bridge over the CSX freight railroad line and abandoned railroad right-of-way was built in 1864 and is a stone/brick closed spandrel arch bridge. The bridge is part of a former larger brick arch viaduct with brownstone ashlar spandrel walls and granite arch rings. The bridge carries 3 lanes of Chestnut Street with sidewalks. The proposed work includes masonry restoration/repair of the brick arch, replacement of sidewalks, waterproof and replacement of the roadway. The sidewalks will be widened, and repairs will be made to the spandrel walls and retaining walls. The arch fill will be removed and replaced. The bridge is not individually eligible for listing in the National Register, but is recommended as a contributing resource to the Ramcat/Schuylkill Historic District.

(4) The Chestnut St. Bridge over 24th Street is a 3-span closed spandrel brick arch bridge with stone spandrel walls and fascia rings. There is a main span over the 24th Street roadway and side spans over existing sidewalks. Cantilevered sidewalks on the bridge were added ca. 1910 and are supported by steel framing. The proposed work includes masonry restoration/repair of the structure, and major deck, roadway, and sidewalk work. Repairs will be made to the spandrel walls and retaining wall and the arch fill will be removed and replaced. The bridge is not individually eligible for listing in the National Register, but is located within the Ramcat/Schuylkill Historic District.

(5) The Schuylkill Avenue West Bridges (2) over I-76 (Schuylkill Expressway) were built in 1959 and are composed of non-composite rolled stringers supported on built up column bents. These structures carry 4 to 5 lanes of traffic with sidewalks from Walnut Street to Market Street. The structures require complete deck replacement, structural steel repairs, and painting. The bridges are not individually eligible for listing in the National Register, but are recommended as a contributing resource to the 30th Street Station Historic Site.

(6) Ramp A and B were built with the Schuylkill Avenue West Bridges and are of similar construction. These structures require LMC deck overlay replacement, deck joints replacement, steel repairs, and painting. The bridges are not eligible for listing in the National Register.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This project provides for the design of I-95 construction sections GR0 (MPMS# 80094 which has been Let), GR1 (MPMS# 79686 which has been let), GR2 (MPMS# 83640 which has been let), GR3 (MPMS# 79826), GR4 (MPMS# 79827), and GR5 (MPMS# 79828). The construction projects will provide widening and reconstruction of I-95 to eliminate the lane drop (from 3 to 4) in both directions at the Girard Avenue Interchange by providing 4 continuous thru lanes in each direction (Construction Sections GR0 thru GR4). In addition, an auxiliary lane will be provided in each direction to connect the ramps between adjacent interchanges at Vine St and Allegheny Ave. The existing substandard shoulders will be replaced with full width shoulders along most of the project length. Specifically, 22 mainline bridges will be replaced, 4 Girard Ave Interchange ramp bridges will be replaced, 2 arterial road bridges will be replaced or rehabilitated and 4 Conrail bridges over relocated Richmond St will be constructed. The Girard Avenue Interchange will be reconfigured to improve access, operation and safety. Specifically, direct access will also be provided from I-95 SB to Delaware Ave. Additional direct access is being provided from Girard and Delaware Avenues to I-95 SB and from Aramingo Avenue to I-95 NB. No existing interchange movements will be eliminated. Pedestrian, bicycle and transit facilities are present along Delaware Avenue, Richmond Street, Aramingo Avenue and Girard Avenue. The pedestrian and bicycle facilities will be expanded under this project to include wider sidewalks, a shared-use trail and other pathways. Appropriate pedestrian access will be provided via signalized crossings, refuge medians, signing, hand/man signals and visible pavement markings.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental strategies for details related to this project.

This project is integral to the Delaware Valley Freight Corridors Initiative.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 20 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, and 102309. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#'s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

A new roadway and a new bridge across Frankford Creek will be constructed. The project has been identified as the first of a multi-phased project to construct a "River Road" along the north Delaware Riverfront amidst planned residential and recreational facilities. The new road will extend between Lewis Street, where it currently ends, and Buckius Street, approximately a mile and 1/2 further north. The roadway will include a sidewalk and shared-use sidepath, part of the North Delaware Riverfront Greenway trail. The road will also serve as an alternative to route for local truck traffic in order to get that traffic off of narrow Richmond Street. Phase 1A of this project has been let under this MPMS #46956 for construction on 11/7/2013, and this project is the design parent of MPMS #102102 (North Delaware Avenue Phase 1B).

Other recreational facilities associated with this project include the North Delaware River Greenway trail, sponsored by the PA Environmental Council. The trail is roughly 10 to 11 miles long and runs approximately from the Allegheny Ave. /Richmond St. intersection under the I-95 overpass, along Allegheny Ave., to Delaware Ave. /Lewis St. near the Betsy Ross Bridge and north into Northeast Philadelphia to Grant Avenue. MPMS #61712 provides a full description of these sections, which will be broken out to individual projects at the appropriate time:

- Section 1/N Del Riverfront Greenway/Delaware River Heritage Trail, Lewis to Old Frankford Creek, MPMS #46956 and #79830.
- Section 2/N Del Riverfront Greenway/Kensington & Tacony, Old Frankford Creek to Princeton Avenue (Tacony Boat Ramp), MPMS #61712.
- Section 3/N Del Riverfront Greenway/Delaware River Heritage Trail, Princeton Avenue to Pennypack Park trail, MPMS #79832.
- Section 4/N Del Riverfront Greenway/Delaware River Heritage Trail, Pennypack Creek to Pleasant Hill Park (Linden Avenue Boat Ramp), MPMS #79833.

MPMS #90482 for the North Delaware Riverfront Greenway was advanced with TIGER and CMAQ funding. Project CMP (Congestion Management Process) commitments include strategies such as improvements for bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2008 annual memoranda on supplemental strategies for details related to this project.

This project consists of all phases from preliminary and final design to re-construction of Langley Ave access road from 26th Street to Broad Street adjacent to the Navy Yard reserve basin. This project will improve safety and access from the west to the east side of The Navy Yard. This project includes the reconstruction of the roadway and installation of new curbs, curb cuts, sidewalks and streetscaping features along the existing Langley Avenue and the eastern half of the existing Broad Street from Langley to Intrepid, while maintaining the existing roadway widths and lane configurations. Langley Ave. will be reconstructed and have a curve straightened to more safely accommodate passing tractor trailers.

This project will provide assistance to the PennDOT project manager and design review services for the I-95 Reconstruction Projects in the City of Philadelphia. These projects include, but are not limited to, the following sections: Section RVS, GIR, AFC, BRI, BSR, and CPR. The limits of the contract cover the City of Philadelphia. The selected firm will be required to provide engineering management assistance and design review services during the preliminary and final design phases. They will be required to provide sufficient staff to assist the Department in adequately maintaining project coordination and schedule for design through bidding of the construction contracts. Other tasks required include, but are not limited to: review of design submissions, hydraulic reports, type size and location submissions, final bridge plans and computations, geotechnical reports, preliminary and final right of way plans, design plans, special provisions, specification and estimates prepared by other consulting engineering firms. Conduct design review meetings and plan checks; review environmental items of work; coordinate required permit applications; standardize design details, coordinate design and right of way acquisition activities, coordinate all traffic control plans to provide optimum traffic flow, coordinate with the various agencies, public officials, interested groups, communities, and utilities by means of periodic meetings; prepare master timetables to coordinate all phases of the projects; monitor schedule to assure compliance with master schedule; evaluate all value engineering submissions and make recommendations to the District. Tasks also include public involvement, development of project newsletters, environmental permit review and tracking of mitigation strategies, preparation of materials for the project website, assist in preparing applicable inter-agency agreements, and responding to public inquiries both through written and e-mail.

The scope of the project is the reconstruction of Germantown Avenue from Ashmead Street to a point south of Church Lane, a distance of approximately 2,000 feet. The project also includes a separate roadway section of Germantown Avenue from High Street to Walnut Lane and related water and sewer plans for the City of Philadelphia Water Department, a distance of approximately 400 feet. This project includes the reconstruction of the roadway, drainage improvements, replacement of the existing SEPTA trolley track facilities, roadway improvements, improvement of the north bound track area, removal of granite blocks, and removal of SEPTA tracks and replacement with new SEPTA T-rails and concrete. Both the north and south bound improvements include new sidewalks, new street lighting, new trees, and streetscape improvements.

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP: N

The project consists of the replacement of the existing Allens Lane bridge carrying two lanes of north/south traffic of S.R. 4003 over two tracks of SEPTA's Chestnut Hill West (R8) Regional Rail Line. The existing bridge is being replaced along the existing horizontal alignment and approximate vertical alignment with minimal approach work. The proposed bridge will consist of a 50-foot long single span structure comprised of adjacent prestressed concrete box beams supporting a reinforced concrete deck. The proposed bridge roadway width is one 10-foot wide travel lane in each direction with a 6.6-foot wide shoulder area on the right side to equal the existing 26.6 feet curb-to-curb approach width. The proposed sidewalk width has been set to 8 feet on both sides of the structure to conform to that of the existing sidewalks on the approaches. The sidewalks will be flanked by 3.5-foot high concrete parapet walls with the existing metal protective barrier mounted to the top of the parapets to provide further pedestrian safety. There will be approximately 115 feet of approach roadway work on each approach end of the project to meet the existing pavement and sidewalk conditions. The approach roadway work will include the intersections of Allens Lane with Cresheim Road at the southwest and northeast of the structure. The proposed roadway consists of a normal crowned section within the project limits.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

The PA Environmental Council is the sponsor of a multi-use trail (aka "North Delaware River Greenway and Trail, North Delaware River East Coast Greenway" or "Delaware River Heritage Trail" or "Bridesburg Trail" or "Kensington & Tacony Trail"), which entails a 12-foot wide multi-use trail along the Delaware riverfront. Consisting 4 main sections, the overall trail is about 10-11 miles long and runs approximately from the Allegheny Ave. /Richmond St. intersection under the I-95 overpass, along Allegheny Ave., to Delaware Ave. /Lewis St. near the Betsy Ross Bridge and north into Northeast Philadelphia to Grant Avenue. This line item (MPMS #61712) contains funding for all 4 sections which are approximated below, that have been or will be broken out into separate MPMS#s at the appropriate time.

(1) MPMS #46956 (constructed) and #79830 –The Delaware Avenue Extension extends the Port Richmond Trail from Lewis Street to Orthodox Street in MPMS #46956. A gap between Orthodox Street and Old Frankford Creek (MPMS #79830) remains. Note that the Port Richmond Trail (MPMS #90482) that has been constructed begins at Allegheny Ave. /Richmond St. intersection under the I-95 overpass near the Montkiewicz Playground, along Allegheny Ave., to Delaware Ave. /Lewis St. near the Betsy Ross Bridge. The Port Richmond Trail (MPMS #90482) and North Delaware Avenue Extension (MPMS #46956) is approximately 2.25 miles long and was funded with TIGER and CMAQ funds.

(2) MPMS #61712 - The Wissinoming / Tacony (K&T Trail) section is approximately 3 miles long, begins at the Old Frankford Creek at the Frankford Arsenal Boat launch and runs north along the center line of the former Kensington and Tacony Rail line which is a 30-foot wide right of way through Lardner Point Park (an existing Trail and Park) to Princeton Avenue (Tacony Boat Ramp).

(3) MPMS #79832 - The Holmesburg Trail section is approximately 2 miles long and begins at Princeton Avenue and runs north along the river's edge to tie into the existing Pennypack Park trail. The section between Rhawn Street and Pennypack Creek is completed.

(4) MPMS #79833 (let for construction on June 2014) - The Torresdale (Baxter) Section is approximately 3 miles long to cross the Pennypack Creek via a proposed bridge and pass behind the Police and Fire Academies to Pennypack Street, then head west along Pennypack Street to State Road, then head north along State Road to Linden Avenue, and finally head east to Pleasant Hill Park (Linden Avenue Boat Ramp). This was advanced with \$51,795 earmark funds from LY10 of PA ID #464.

A total of \$2,562,976 earmark funds remaining from PA ID #s 242, 262, 464, 615, and 671 are for the sections (except MPMS #90482):

- PA ID #242 - \$471,425 of the original \$546,425 from 2003 Appropriations Bill.
- PA ID #262 - \$183,994 of the original \$750,000 from 2004 Appropriations Bill.
- PA ID# 464 - \$0 of the original \$8,000,000 from SAFETEA DEMO #2649.
- PA ID# 615 - \$1,406,386 of the original \$3,000,000 from SAFETEA DEMO #4805.
- PA ID# 671 - \$501,171 of the original \$500,000 from SAFETEA DEMO #363.

The project consists of rehabilitation of the drawbridge carrying Passyunk Avenue over the Schuylkill River. The main objective of the proposed rehabilitation project is to restore operational integrity to the existing four-leaf bascule span. While staged repairs and restoration are being made to the bascule span, any preventive maintenance or strengthening/retrofit work will also be performed on the approach spans. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Bridge Restoration

PennDOT Improvement: Bridge Restoration

NHPP: Y

The project involves rehabilitating or replacing the bridges carrying Market Street (SR 3010) over the Schuylkill River and CSX Railroad. The project includes the repairing and patching of the parapets and sidewalks as needed, replacement/repair of the deck and beams, and replacement of cobrahead lighting. The CSX bridge may be replaced. The bridge is structurally deficient due to severe rust in the substructure and spalling in the superstructure.

The bridge carries an arterial city street with sidewalks over electrified tracks and an expressway on the south side of 30th Street Station. This project does not involve the Amtrak bridge, but does include the bridges that span the Schuylkill River and CSX railroad.

The 2 span, 361'-long concrete encased steel arch bridge over the Schuylkill River was built in 1932 is finished with limestone spandrel walls and fascia rings. Concrete urn-shaped balustrades and statues decorate the structure, although a quadrant of the balustrade has been filled with concrete. The bridge is significant as a contributing resource to the 30th Street Station Historic District. This bridge was previously determined eligible for listing in the National Register.

The 4 span, 216' long built up deck girder bridge over CSX railroad, built in 1932, is supported on concrete abutments and three steel pier bents, of which two are encased in concrete. This bridge was previously determined ineligible for listing in the National Register.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This project involves rehabilitating or replacing the bridge carrying Willits Road (S.R. 1011) over Wooden Bridge Run in the City of Philadelphia. The purpose of the project is to extend the service life of the existing structure. The existing structure has severely rusted components, large open spalls exposing rusted reinforced steel, and cracks with efflorescence. Work will include replacing or rehabilitating the existing superstructure and reinforced concrete overlay. The project could also include upgrades to the guiderail approaches.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Bridge Restoration

PennDOT Improvement: Bridge Restoration

NHPP: N

This project involves rehabilitating or replacing a bridge located on Grays Ferry Avenue (S.R. 3021) that crosses the Schuylkill River and Amtrak railway tracks and is located between Woodland Avenue and 34th Street in the City of Philadelphia. This project involves rehabilitating the pier caps on the bridge, and may also include minor deck repairs due to the spalling. The purpose of this project is to extend the service life of the bridge which was built in 1976. The existing bridge upholds the two lanes for each approach of Grays Ferry Avenue over the Schuylkill River, which flows in a southerly direction. The existing bridge's pier caps are missing welds and members and have minor section loss. The 3-span, 155'-long and BO'-wide, encased steel stringer bridge is composed of a three-span 46'-59'-46' continuous-cantilever main span. The suspended section of the center span has ship-lap connections. The bridge is supported on concrete abutments and column bents with partial crash walls.

This bridge has bike lanes and is a companion project to MPMS #96222, Enhanced Bike Facility Connection between Gray's Ferry and Bartram's Garden, which will create/re-allocate space on the Gray's Ferry Bridge to provide for the City's first "cycle track" (a separated two way bike lane) and improve bike facilities on Paschall Avenue, 49th, Gray's Avenue and Lindbergh Avenue to connect the Gray's Ferry Crescent section of the Schuylkill River Trail over to the entrance of Bartram's Garden. \$600,000 (\$400,000 CMAQ/ \$200,000 Matching local funds) was approved during the 2012 CMAQ Competitive Program selection process for the "Cycle Track" project.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This is an industrial corridor with plentiful local truck traffic, characterized by a wide right-of-way, on-street parking, few bicycle or pedestrian amenities, and extensive impervious surfaces resulting in large amounts of stormwater runoff. This project consists of streetscape improvements including curbing, paving, sidewalk improvements, crosswalks, traffic management, landscaping, and possible bicycle facilities, as well as extensive stormwater management improvements. TIGER grant funding awarded in 2015 will allow for reconstruction of the center median, formerly a rail right-of-way, to include expanded green stormwater improvements. American Street between Girard and Lehigh Avenues is classified as an urban collector on the Federal Functional Classification System.

This project has been awarded \$5,000,000 in Federal TIGER grant funding which will be used for construction.

The Home Town Streets/Safe Routes to School (HTSSRS) programs are intended to improve the quality of life in our communities. Projects aim to encourage reinvestment in and redevelopment of our downtowns, and to establish safe walking routes for children to commute to school where feasible.

This project will provide for the construction of streetscape improvements along the 6300 to 7500 blocks of Germantown Avenue in the Mt. Airy section of Philadelphia. Improvements will include street trees, trash receptacles, lighting, repair and replacement of sidewalk as well as beautification through art and landscaping.

This project was recommended in the spring of 2005 for funding through the HTSSRS program. \$936,100 funding will be drawn down at the appropriate time.

Implement streetscape and traffic calming measures at the area of 10th and Vine Streets in the Chinatown neighborhood of Center City.

In the spring of 2006 this project was recommended for funding through the Home Town Streets Program. \$980,250 will be drawn from MPMS #64984 at the appropriate time.

CMP: Not SOV Capacity Adding

PennDOT Class: Bridge Replacement

PennDOT Improvement: Bridge Replacement

NHPP: Y

Rehabilitation of the structurally deficient; load posted bridge on John F. Kennedy (JFK) Boulevard between Market Street and 30th Street at 32nd Street over SEPTA double track (West Branch).

The current structure is posted for 15 tons based on the substructure condition. The proposed work includes deck and sidewalk repairs/replacement, joint replacement, steel superstructure and substructure repairs/replacement, zone painting of superstructure and substructure, possible bearing replacement, drainage upgrades, and concrete substructure repairs. The project will also include streetscape improvements such as bike lanes and street lighting upgrades. A feasibility study will be undertaken to examine relocation of the I-76 on/off ramps and traffic/pedestrian/transit circulation around 30th Street Station.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This is a breakout from MPMS #69828.

PennDOT Improvement: Bridge Restoration

NHPP: Y

This project involves the superstructure replacement or rehabilitation of the bridges carrying JFK Boulevard over 21st Street (BMS 67-3037-0012-1666), 22nd Street (BMS 67-3037-0012-1210) and 23rd Street (BMS 67-3037-0012-0886). The current scope is to replace or rehabilitate the existing superstructures (prestressed non-composite adjacent box beams) with new superstructures. No widening of the bridges or abutment work is anticipated. The bridges will most likely be constructed in half-widths, with one lane of traffic maintained in each direction. Right-of-Way impacts are to be determined, but are anticipated to be limited to temporary construction easements. This project includes funding for MPMS #78761 (JFK Blvd over 21st Street) and MPMS #78757 (JFK Blvd over 23rd Street).

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Highway Reconstruction

PennDOT Improvement: Highway Reconstruction

NHPP: Y

This construction contract will include all major utility relocation work and a majority of the surface street reconstruction and relocation work between Berks Street and Ann Street. Most of Delaware Avenue and relocated Richmond Street will be reconstructed and the temporary detour road will be constructed along Conrail's Port Richmond Yard. Delaware Avenue will be relocated onto Richmond Street and Aramingo Avenue will then form a T-intersection with these roadways. Girard Avenue and Aramingo Avenue will also be reconstructed as much as possible with completion of the Girard Avenue interchange ramps following in later phases of the project (Sections GR3 and GR4). Section GR1 will include structures such as the Girard Avenue trolley bridge, the four (4) bridges carrying Conrail over relocated Richmond Street and associated retaining walls along Richmond Street and the detour road. Besides the detour road construction, associated detour route improvements would be made such as temporary intersection improvements and signal retimings. This section also includes the SEPTA Route 15 Trolley relocation and associated catenaries work and relocation of Conrail's Belt and Loop Lines. Pedestrian and bicycle facilities are present along Delaware Avenue, Richmond Street, Aramingo Avenue and Girard Avenue. The pedestrian and bicycle facilities will be expanded under this project to include wider sidewalks, a shared-use trail and other pathways. Appropriate pedestrian access will be provided via signalized crossings, refuge medians, signing, hand/man signals and visible pavement markings. This project is being coordinated with the I-95 Section CPR and Section AFC projects from a construction letting and geographical location standpoint. This project is a breakout of MPMS# 17821 (GIR).

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's annual memoranda on supplemental strategies for details related to this project.

This project is integral to the Delaware Valley Freight Corridors Initiative.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 20 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, and 102309. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#'s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

PennDOT Class: Interstate Maintenance Program **PennDOT Improvement:** Interstate Maintenance Program

NHPP: Y

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of AFC (MPMS #47813).

The project includes the local road improvements in support of I-95 AF3 and AF4 (main line I-95). Richmond Street will be reconstructed and widened by two feet on the east side from Ann Street to Allegheny Avenue. Amenities including street trees, pedestrian scale street lighting, and new sidewalks and curbing will be installed. The SEPTA trolley tracks and electric traction system, including catenary poles, duct bank, and manholes will be reconstructed. In addition, the project will reconstruct the SEPTA Westmoreland Loop between Emery Street, Westmoreland Street, Madison Street, and Richmond Street. SEPTA trolley tracks will be reconstructed and improvements will be made to the trolley turn-around loop at Westmoreland Street. As part of this project, many of the utilities under Richmond Street will be relocated outside of the trolley tracks and aerial utilities will be moved underground. Due to on-street parking impacts during construction, Melvale Street will be widened by seven feet from Clearfield Avenue to Wishart Street to accommodate temporary parking, including street lighting for the parking area. At the request of the Philadelphia Water Department, the Madison Avenue sewer will also be reconstructed as part of the project.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. PennDOT Class: Bridge Replacement **PennDOT Improvement:** Bridge Replacement **NHPP:** Y

This project involves rehabilitating or replacing four superstructures (19th Street, 20th Street, Free Library Pedestrian Walkway, and Family Court Pedestrian Walkway) over I-676 in the City of Philadelphia. This section is located at the Free Library Pedestrian Bridge (Shakespeare Park) north of Logan Circle and includes the intersection realignment of 20th and Winter Street. The improvements include superstructure replacement with steel and concrete decks, pier removal and abutment modifications to accommodate the new superstructure and minor approach roadway work. An existing opening between 20th Street and the Free Library Pedestrian Bridge will be capped over with new superstructure as a part of this project. Approach roadway work will include reconstructing the Ben Franklin Parkway from 20th Street to 21st Street. There are existing sidewalks along both sides of 20th Street, Ben Franklin Parkway and Winter Street that will be replaced in kind. Existing bike lanes along Ben Franklin Parkway and 20th Street will also be replaced in kind. Enhancements along the Franklin Institute at the intersection of Winter Street and the Ben Franklin Parkway, and enhancements at the Free Library Pedestrian Bridge that were previously included in MPMS# 79473 and 85059 respectively, have been incorporated into this project.

The improvements for the replacement of seven structurally deficient Vine Street Bridges that cross over the I-676 Expressway include improvements at the structures which carry 18th Street, 19th Street, 20th Street, 21st Street, 22nd Street, the Free Library Pedestrian Walkway, and Family Court Pedestrian Walkway. The project will now be advanced to construction under one contract with funding reflected in two MPMS #: 80054 and 88767. The total cost for reconstruction of the seven structures is approximately \$125 million.

Preliminary engineering for all seven structures was included in MPMS# 80054, including \$975,000 that addressed two additional structurally deficient structures on Spring Garden Street over the Schuylkill River and I-76 Expressway, prior to them being adequate to serve as a detour route when the Vine Street Structures are under construction. Inspections have determined that rehabilitation work will be required for the structures on Spring Garden Street. Separate construction projects for the Spring Garden Street structures have been broken out to MPMS# 90096 and MPMS# 90097.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

IPD: 2

PROJECT MANAGER: Gannett/B. Masi

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 15A

PennDOT Class: Safety Improvement

PennDOT Improvement: Safety Improvement

NHPP: Y

This 4.0 mile corridor consists of Henry Avenue from Lincoln Drive (near the Wissahickon Creek) to Port Royal Avenue through Philadelphia's Roxborough neighborhood. Many of the congestion management strategies and identified improvements will provide safety benefits to this heavily traveled corridor. The project will implement the recommendations identified in the 2004 CCIP Final Report including; installing "hand/man" pedestrian signals at all locations and consider the appropriateness of the advanced pedestrian phase, except integrated corridor management initiative; installing centerline rumble strips at all painted median locations where appropriate; performing selective tree removal where appropriate based on cluster information and will consider the removing all trees from curbed median areas; installing reflective pavement markers to better delineate the travel lanes along median and in between lanes; and installing enhanced signage.

The anticipated benefits of this project are to: reduce the frequency of both reportable and non-reportable crashes that is occurring at the signalized intersections and mid-block locations; increase capacity at the signalized intersection for the daily peak travel periods; provide signal coordination to better manage traffic flows during peak periods and incidents; reduce the severity of the reportable crashes; and mitigate the crash clusters. The corridor improvements have been broken out to 2 separate projects. See companion project MPMS #102134.

FD (\$1,200,000 estimate), UTL (\$100,000 estimate), ROW (\$100,000 estimate), and CON (\$5,500,000 estimate) will be drawn from MPMS# 57927 at the appropriate time.

This project involves rehabilitating or replacing the bridge carrying Roosevelt Boulevard SR 0001 over Roberts Road, Wayne Avenue Station, Clarissa Street, Germantown Avenue, and N. Gratz Street. The existing bridge is 2,589 feet in length and carries two 12-foot northbound lanes, three 12-foot southbound lanes, shoulders, and a center median barrier. The rehabilitation or replacement will include deck replacement, superstructure and substructure repairs, bridge painting, bearing maintenance, evaluation of pin & hangers, fatigue analysis, and seismic analysis. The project will be constructed under traffic. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

PennDOT Class: Federal Safe Routes to Schools **PennDOT Improvement:** Federal Safe Routes to Schools

NHPP:

This project will improve walking routes in the 37 District K-8 schools to increase safety for students who walk or bike to school. The sidewalks on the streets bordering the targeted schools are in varying states of disrepair, presenting a danger to students walking or riding their bicycles to school. This project will repair the sidewalks by removing cracked, raised, and broken concrete blocks that make the sidewalks uneven and filling the spaces with new concrete in order to create a smooth, even, hard surface safe for walking and bike riding. Bike racks will also be installed in convenient locations within school boundaries.

This project was awarded \$1,000,439 in federal Safe Routes to School (SRTSF) funding in May of 2009.

PROJECT MANAGER: George Dunheimer ADE CONSTR **CMP:** Not SOV Capacity Adding

CMP Subcorridor(s): 4B

PennDOT Class: Transportation Enhancement **PennDOT Improvement:** Transportation Enhancement

NHPP:

The PA Environmental Council is the sponsor of a multi-use trail (aka "North Delaware River East Coast Greenway", Delaware River Heritage Trail" or "Bridesburg Trail"), which entails a bike/pedestrian trail along the Delaware riverfront, is a multi-phase project throughout Northeast Philadelphia. This TIGER funded connecting segment of the trail known as the Port Richmond Trail will begin at Allegheny Ave./Richmond St. intersection under the I-95 overpass near the Montkiewicz Playground, along Allegheny Ave., to Delaware Ave./Lewis St. near the Betsy Ross Bridge.

This trail network is intended for transportation purposes and will ultimately connect to Center City and South Philadelphia via the Schuylkill River Trail as well as suburban communities to the North via the East Coast Greenway. Once it is completed, it will allow users to access work, school, shops, medical facilities and other services throughout Philadelphia as well as those in outlying suburban communities to provide an extensive trail network through the DVRPC region.

\$1.76 million for this project was provided through the TIGER program - Transportation Investment Generating Economic Recovery - and has been combined with \$740,000 CMAQ for a \$2.5 million construction phase.

The greenway/trail consists of additional sections which have or will be broken out from the Greenway line item (MPMS #61712) at the appropriate time:

- (1) MPMS #46956 (constructed) and #79830 –The Delaware Avenue Extension extends the Port Richmond Trail from Lewis Street to Orthodox Street in MPMS #46956. A gap between Orthodox Street and Old Frankford Creek (MPMS #79830) remains.
- (2) MPMS #61712 - The Wissinoming / Tacony (K&T Trail) section is approximately 3 miles long, begins at the Old Frankford Creek at the Frankford Arsenal Boat launch and runs north along the center line of the former Kensington and Tacony Rail line which is a 30-foot wide right of way through Lardner Point Park (an existing Trail and Park) to Princeton Avenue (Tacony Boat Ramp).
- (3) MPMS #79832 - The Holmesburg Trail section is approximately 2 miles long and begins at Princeton Avenue and runs north along the river's edge to tie into the existing Pennypack Park trail. The section between Rhawn Street and Pennypack Creek is completed.
- (4) MPMS #79833 (let for construction on June 2014) - The Torresdale (Baxter) Section is approximately 3 miles long to cross the Pennypack Creek via a proposed bridge and pass behind the Police and Fire Academies to Pennypack Street, then head west along Pennypack Street to State Road, then head north along State Road to Linden Avenue, and finally head east to Pleasant Hill Park (Linden Avenue Boat Ramp).

NHPP:

This project includes construction of infrastructure and streetscape improvements on Race St. between 2nd St. and Columbus Blvd, to improve neighborhood connections and pedestrian and cycling access to waterfront activities, parks and trails.

The project consists of the construction of a two way multi-use trail connection to the East Coast Greenway on Delaware Avenue and streetscape and beautification improvements along the north side of Race Street between 2nd Street and Columbus Boulevard (approximately 900 linear feet) in the City of Philadelphia, Pennsylvania. Improvements include but are not limited to: pedestrian amenities along the north side of Race Street; a revision to the horizontal geometry of the I-95 on-ramp to reduce speeds and accommodate a sidewalk and crossing for pedestrians; ADA compliant crossings at the 2nd Street and Columbus Boulevard intersection; landscape and lighting improvements consistent with the recently completed Phase 1 (south side of roadway) and the Race Street Pier projects; site furniture, wayfinding and directional signs and screen wall similar to Phase 1; and minor utility and drainage improvements required to accommodate the new roadway geometry and site amenities.

NHPP:

This project will include the design and construction of ADA ramps that were originally included in the scope of other Federal Aid projects, such as, but not limited to: 1)South Street Bridge(MPMS# 17724), 2) CW 101 Resurfacing(MPMS# 72446), and 3) CW 103 Resurfacing(MPMS# 91837). The ramps would have typically been included as design build items in the project contracts, however, in some instances, the urban context of the ADA ramp locations warrant further coordination or study. To allow the original construction projects to proceed in a timely fashion, these ramps were pulled from the original construction contracts, and will now be addressed as part of this transition project. This will allow the City to design and construct the ramps to current ADA requirements while providing for stairs, cellar doors, unique paving materials, adjacent historic properties, and other considerations as necessary.

IPD: 1

PROJECT MANAGER: George Dunheimer ADE CONSTR **CMP:** Not SOV Capacity Adding

CMP Subcorridor(s): 3B

PennDOT Class: Bicycle/Pedestrian

PennDOT Improvement: Bicycle/Pedestrian

NHPP:

The project will repurpose an existing abandoned rail infrastructure into a bicycle and pedestrian connection between Lower Merion, Cynwyd Trail, and Manayunk. It will provide direct access to the Ivy Ridge and Cynwyd stations, as well as improved access to the Manayunk Station and the Wissahickion Transit Center. This project was awarded \$204,246 CMAQ funds from DVRPC 2011-12 Competitive CMAQ Program. Companion project with MPMS# 92413.

The Circuit is a 750-mile interconnected network of multi-use trails spanning Greater Philadelphia with Philadelphia and Camden as its hub, and is included in DVRPC's Long-Range Transportation Plan. Circuit trails will generally meet minimum design standards (10-foot wide, paved, and separated from traffic) to reflect their intended use as the arteries of a dedicated regional non-motorized transportation system. Circuit trails located near and connecting to downtown Philadelphia are already used heavily for transportation purposes, and the implementation of the network will further encourage the surging growth of bicycle commuting in the region. At 2.3%, Philadelphia has the highest bike-to-work percentage of the 10 largest cities in the country according to the 2013 American Community Survey.

PROJECT MANAGER: Gannett/S.New

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

The purpose of the project is to rehabilitate the bridge to prolong the useful life and to remove the structural deficient (SD) status of the structure. The scope includes steel repairs, painting, bearing and substructure repairs and the replacement of the bridge deck and joints. The bridge is currently posted for three tons with a sufficiency rating of 29.0. The City of Philadelphia deems this work necessary to remove the current posting and prevent continued deterioration that could lead to a bridge closure.

CMP Subcorridor(s): 6A

PennDOT Class: Bridge Restoration

PennDOT Improvement: Bridge Restoration

NHPP:

This project is a bridge rehabilitation/replacement of Woodland Avenue over SEPTA in the City of Philadelphia. This bridge is a multi-modal bridge that was originally constructed in 1928 and has exceeded its useful life. Due to the poor condition of the bridge, it is currently weight restricted. This structure was considered an orphan bridge, but is now owned by the City of Philadelphia, with SEPTA handling maintenance responsibilities. In addition, SEPTA's Media/Elwyn Regional Rail line operates beneath the bridge and SEPTA's Trolley Routes 11 and 36 run on the bridge.

The bridge was initially programmed under the County Bridge Line Item (MPMS# 95447) which sets aside funding for county owned bridges in need of repair in the DVRPC region. SEPTA is managing the project on behalf of the City of Philadelphia.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

NHPP:

This project completes the first phase of a multi-phased project to construct a "River Road" along the north Delaware Riverfront amidst planned residential and recreational facilities. This segment extends between the end of section 1A at Orthodox Street and Buckius Street, just over a quarter mile to the northeast. The roadway will include sidewalks and a shared-use sidepath, part of the North Delaware Riverfront Greenway trail. The road will also serve local truck traffic as an alternative to narrow Richmond Street. This is a breakout of design parent MPMS #46956.

Other recreational facilities associated with this project include the \$15 million North Delaware Riverfront Greenway Trail, sponsored by the PA Environmental Council. The trail is roughly 9 miles long and runs approximately from the Betsy Ross Bridge north into Northeast Philadelphia near Grant Avenue. MPMS #61712 provides a full description of these sections which will be broken out to individual projects at the appropriate time.

Project CMP (Congestion Management Process) commitments include amenities for bicycles and pedestrians. The road will also serve as an alternate route for local truck traffic accessing I-95 from local industrial and commercial businesses. See DVRPC's 2013-2014 memorandum on supplemental strategies for details related to this project.

PROJECT MANAGER: Gannett/B. Masi

CMP:

PennDOT Class: Safety Improvement

PennDOT Improvement: Safety Improvement

NHPP: Y

This 1.6 mile corridor consists of Henry Avenue from Abbotsford Avenue to Hermit Lane in Philadelphia's East Falls neighborhood. Many of the congestion management strategies and identified improvements will provide safety benefits to this heavily traveled corridor. The project will implement the recommendations identified in the 2004 CCIP Final Report and includes installing "hand/man" pedestrian signals at all locations and consider the appropriateness of the advanced pedestrian phase; installing centerline rumble strips at all painted median locations where appropriate; performing selective tree removal where appropriate based on cluster information and will consider the removing all trees from curbed median areas; installing reflective pavement markers to better delineate the travel lanes along median and in between lanes; and installing enhanced signage.

The anticipated benefits of this project are to: reduce the frequency of both reportable and non-reportable crashes that is occurring at the signalized intersections and mid-block locations; increase capacity at the signalized intersection for the daily peak travel periods; provide signal coordination to better manage traffic flows during peak periods and incidents; reduce the severity of the reportable crashes; and mitigate the crash clusters. The corridor improvements have been broken out to 2 separate projects. See companion project MPMS #80104. PE will be funded and completed under MPMS# 80104.

FD (\$300,000 estimate), UTL (\$250,000 estimate), ROW (\$500,000 estimate), and CON (\$3,000,000 estimate) will be drawn from MPMS #57927 at the appropriate time.

PennDOT Class:

PennDOT Improvement:

NHPP:

DVRPC Work Program project.

Goals:

To rationalize vehicular movements along Roosevelt Boulevard that would address pedestrian and vehicular safety issues. To identify near term and long term improvements that would bring the boulevard in conformance with modern design standards.

Description:

Roosevelt Boulevard is major traffic artery that is a 12-lane surface arterial with local and express lanes and at-grade intersections in northeast Philadelphia. The speed limit is predominately 45 mph. Pedestrian safety along the roadway has gained national attention and some safety experts have called Roosevelt Boulevard one of the most dangerous highways in the nation. Proposals have been made to both reduce the number of lanes and speed limit on the Boulevard. This project would build upon other planning efforts along the Boulevard, including the Roosevelt Boulevard Safety Task Force and the Alternatives Development for Roosevelt Boulevard Transit Investments by using DVRPC's Travel Demand Model to analyze and quantify the traffic effects on the Boulevard and adjacent arterials under alternative lane configurations, travel speeds, and transit service. Lane crossovers will be evaluated, and strategies would be developed that would identify ways to lengthen, consolidate or eliminate crossovers so that they would be compliant with modern design standards.

Tasks:

1. Create a study advisory committee of engineers, planners and other stakeholders at the city, state and regional level.
2. Identify where consolidation of crossovers is most effective in eliminating redundancy.
3. Develop an improvement strategy for sub-standard crossovers by lengthening the acceleration and/or deceleration lanes to permit a smooth transition.
4. Examine the relationship and proximity of crossovers to pedestrian crosswalks.
5. Investigate the operational issues of heavy vehicles using crossovers along the Boulevard.
6. Develop a prioritized list of crossovers that should be upgraded or eliminated.
7. Prepare conceptual diagrams illustrating recommended improvements
8. Model the impact of lane and speed reductions on traffic volumes, travel patterns, and transit ridership.
9. Prepare an implementation strategy for the final recommendations

Products:

1. Meeting materials
2. Existing and Year 2040 performance measures
3. Summaries of analysis of different concepts
4. A technical report with design concepts

PennDOT Class: Bicycle/Pedestrian

PennDOT Improvement: Bicycle/Pedestrian

NHPP:

Part of the Schuylkill River Trail and the regional trail network, 'The Circuit,' this project will provide a bicycle and pedestrian connection between the Kingsessing and Grays Ferry neighborhoods of Philadelphia across the Schuylkill River, allowing users to access destinations and services throughout South and Southwest Philadelphia and Center City. Completing a river crossing in the vicinity of the Philadelphia, Wilmington & Baltimore Railroad Bridge No. 1, an abandoned swing bridge set in the 'open' position since its closing in 1976, will connect the recently completed Grays Ferry Crescent Trail with the Bartram's Mile Trail currently in design by Philadelphia Parks and Recreation, further connecting with the East Coast Greenway and Cobbs Creek Trail through the TIGER funded Bartram's Garden Trail and 58th Street Connector. The project will utilize portions of the abandoned bridge to construct a multi-purpose bicycle and pedestrian trail structure, replacing the main truss with a smaller, lighter movable span to maintain access for river traffic and reconstructing approach spans on both sides of the river including on-grade approaches. The crossing will also accommodate emergency vehicles. A conceptual study and initial engineering has been completed by the Schuylkill River Development Corporation (SRDC) with funding from DVRPC's Regional Trails Program and the Pennsylvania Department of Conservation & Natural Resources (DCNR).

The Circuit is a 750-mile interconnected network of multi-use trails spanning Greater Philadelphia with Philadelphia and Camden as its hub, and is included in DVRPC's Long-Range Transportation Plan. Circuit trails will generally meet minimum design standards (10-foot wide, paved, and separated from traffic) to reflect their intended use as the arteries of a dedicated regional non-motorized transportation system. Circuit trails located near and connecting to downtown Philadelphia are already used heavily for transportation purposes, and the implementation of the network will further encourage the surging growth of bicycle commuting in the region. At 2.3%, Philadelphia has the highest bike-to-work percentage of the 10 largest cities in the country according to the 2013 American Community Survey.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This project has been awarded \$3,265,000 in Federal TIGER grant funding which will be used for construction.

PROJECT MANAGER: C. Davies

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Starting in December 2014 and extending through 2018, PennDOT will be reconstructing or rehabilitating the Vine Street expressway bridges from 18th Street to 22nd Street and Schuylkill River bridges from Spring Garden to Chestnut Street. The reconstruction work will involve considerable lane closures and traffic detours. It will also impact bus operations and pedestrian movements across the bridges to/from Center City.

To assist traffic management and mitigation planning for the reconstruction work, travel forecasts and analysis will be conducted using DVRPC's regional travel simulation model and the recently completed Center City simulation model. The regional model will be used to estimate the change of travel patterns due to the reconstruction work at the regional level. The Center City model will be extended and used for operational analysis regarding queuing, bottleneck locations, and bus delay on the construction sites and adjacent areas in Center City and University City. The analysis will provide inputs to City traffic management and SEPTA detour planning during the reconstruction.

NHPP:

This work includes the demolition of the two rooms that will comprise the finished TOC space. One (1) of these rooms is currently being utilized as a locker room, so work will also include the fit out of existing storage space to accommodate a new locker room. Within the finished TOC space and the new locker room, work will include all miscellaneous carpentry, flooring, furniture, operator console, windows, doors, ceiling, painting and other architectural work. Within the two bathrooms, this work will include the demolition of the existing space.

Work will also include the modifications of the existing parking lot and entrance way to meet ADA requirements. Specific work will include the restriping of the parking lot to include two (2) handicapped accessible parking spaces and the construction of a ramp leading to the front entrance of the building.

The General Contractor will also be responsible for coordinating the schedules and work for the Electrical, Mechanical, and Plumbing Contractor within the existing Streets Department Building.

This is one of six contracts for the Traffic Operations/CCTV contract.

The other MPMS#'s are as follows: 93106 - Phila TOC, 96227 - Phila TOC CCTV Cameras, 102399 - Phila TOC Electrical, 102400 - Phila TOC Mechanical, 102401 - Phila TOC Plumbing

This project provides for installation of high level street treatments to sign bikeway routes, such as green-backed sharrows, white parking lines, new crosswalks and signage on a pair of north-south streets and brand them as "Neighborhood Bikeways" so that they attract bicyclists away from Broad Street and serve as bicycle friendly streets. As a pair they would create a bicycle friendly corridor serving the heart of South Philadelphia, a rapidly revitalizing area that has a high bicycle mode share.

\$250,000 Regional TAP funds were approved during the 2014 project selection process, to be programmed at the appropriate time, drawing funds from MPMS #64984

PennDOT Improvement:

NHPP:

This project is a construction breakout of Section BSR (MPMS #47811). The BS5 section is a part of the I-95 Reconstruction, SR 0095 Section BSR, also known as the Bridge Street Ramps section. This phase of SR 95 Section BSR covers the 1.3 mile extension of North Delaware Avenue from Buckius Street to Tacony Street. The project includes a new bridge over Old Frankford Creek. A roadway connection from the North Delaware Avenue Extension to the vicinity of the Richmond Street/Bridge Street intersection will be investigated. Also included is a section of the East Coast Greenway multi-use trail from Buckius Street to the K&T Trail on the north side of Old Frankford Creek.

The northern terminus of the Delaware Avenue Extension is Tacony Street at the location of two relocated ramps from the I-95 Bridge Street Interchange. There will be a southbound off-ramp to Tacony Street/North Delaware Avenue and a companion on ramp to I-95 northbound.

For an overall description of the SR 95 Section BSR section, see MPMS #47811.

Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project.

MUNICIPALITIES: Philadelphia City **FC:** AQ Code:X1

PLAN CENTER: IPD:

PROJECT MANAGER: EE/E. Elbich **CMP:**

PennDOT Class: Study Phase of Project **PennDOT Improvement:** Study Phase of Project **NHPP:** Y

This project will examine general concepts and processes necessary to accomplish the long term task of design, management, scheduling, permitting, estimating and reconstructing the segment of I-95 between Spring Garden and Broad Streets in the City of Philadelphia. Matters of funding and revenue policy will not be considered as part of this effort. The work will make projections on an estimated range of years for the remaining service life of the highway, and on how the repair and reconstruction may be managed over that time on a programmatic scale to maintain the good working order of the Philadelphia metropolitan region. Current and previous work on I-95 will be incorporated into an examination of engineering and regulatory issues that will be encountered as the future reconstruction is planned. Of particular interest will be the long-standing public and official commentary, planning efforts, and recommendations directed to the impacts of the original and modified interstate construction on its location and surrounding population. The historical narrative describing these impacts indicates that the Delaware River waterfront as a resource available to those portions of the City that would be adjacent has been diminished by the continued presence of I-95. In order to address the regulatory requirements of the future environmental clearance for the I-95 highway reconstruction within these limits, mitigation of those impacts as recommended and documented over time will be examined relative to the necessary engineering that must be developed for them to be considered constructible and viable solutions.

CMP:

PennDOT Class: Transportation Enhancement

PennDOT Improvement: Transportation Enhancement

NHPP:

The project will fund the construction for the greenway from Aramingo Dr. to Delaware Ave, linking two integral disconnected trail facilities and the surrounding on-road bicycle network. Significant amount of unused right-of-way on Wheatsheaf Lane and Lewis Street provides opportunity to convert area into multi-use greenway sidepath without changing lane widths and maintaining the functionality of roadway. Gateways at either end of greenway will provide trail users with information and directional signage which will direct greenway users to the East Coast Greenway (Port Richmond Trail) and Adams Avenue Connector. The route will be 100% within City right of way along Wheatsheaf Lane, Richmond Street and Lewis Street, connecting Adams Ave Connector to East Coast Greenway.

December 11, 2014 - In summer of 2014, PennDOT held a competitive round of 2-years worth of funding. As a result, this project was one of 13 projects across the DVRPC region that received \$1,000,000 on 11/10/2014 through the statewide TAP program (MPMS #60560) out of the \$7.8 million awarded to the region. Statewide, PennDOT made \$33 million available for 56 projects across the state.

This project additionally received \$1,250,000 DVRPC/Large Urbanized Area regional (TAU) funds.

This project will install the Novachip application to address the wet pavement crashes on a corridor. The resurfacing involves applying Novachip to the pavement, which is a thin application of liquid asphalt emulsion and a single layer of stone, coated with asphalt. The purpose of this Novachip application is to seal the pavement from water and extend the life of the pavement. The life cycle of very high friction values for a Novachip application has shown to be approximately ten years which is in line with replacement of any asphalt pavement surface.

FC:

AQ Code:S10

PLAN CENTER:

IPD:

PROJECT MANAGER: TWB/V. Fleysh

CMP:

PennDOT Class: Highway Restoration

PennDOT Improvement: Highway Restoration

NHPP:

The primary purpose of this project is to restore roadway surfaces to fully functional and optimal conditions; provide smoother riding surfaces for enhanced traffic movement; install pavement markings for better direction for motorists, bicyclists, and pedestrians; and to upgrade non-compliant ADA ramps at crosswalks to current standards. The work will increase the service life of these roadways and reduce future maintenance costs.

All street segments will be milled and resurfaced with bituminous material and restriped. Any ground disturbance will occur within the existing right-of-way and will be limited to the cartway and sidewalks in the various corridors. In most cases, pavement restoration in the disturbed areas will match existing pavement types.

Potential candidates for this resurfacing package include:

- 5th St. - Lehigh Ave. to Luzerne St.; G001, Minor Arterial
- 40th St. - Baltimore Ave. to Girard Ave.; G080, Urban Collector
- Bainbridge St. - Broad St. to Grays Ferry Ave.; G022, Urban Collector
- Enterprise Ave. - Island Ave. To I-95; G178, Minor Arterial

PennDOT Class: Congestion Reduction

PennDOT Improvement: Congestion Reduction

NHPP: Y

This project will improve traffic operations on the eastbound approach to the Benjamin Franklin Bridge by realigning the Fifth Street approach and installing new traffic signal equipment, signage, and intelligent transportation systems (ITS).

Currently eastbound vehicles approach the Bridge from I-676 (Vine Street Expressway), Sixth Street, Race Street, and Fifth Street. Drivers must execute a series of turn and merge maneuvers within a short distance. The existing geometry and lane configuration on these approaches reduces operating speeds and creates vehicular conflicts. The proposed improvements would provide motorists positive guidance for merging, advanced warning of lane drops and advanced guidance for lane selection.

DVRPC FY 2017-2020 TIP for PA

Final Version

Pennsylvania - Highway Program (Status: TIP)

Philadelphia

MPMS# 105488 Citywide Resurfacing 105

LIMITS City of Philadelphia

Est Let Date: 2/15/2018

IMPROVEMENT Roadway Rehabilitation

MUNICIPALITIES: Philadelphia City

FC:

AQ Code:S10

PLAN CENTER:

IPD:

PROJECT MANAGER: TWB/V. Fleysh

CMP:

PennDOT Class: Highway Restoration

PennDOT Improvement: Highway Restoration

NHPP:

The primary purpose of the project is to restore roadway surfaces to fully functional and optimal conditions; to provide smoother riding surfaces for enhanced traffic movement; to install pavement markings for better direction for motorists, bicyclists, and pedestrians and to upgrade non-compliant ADA ramps at crosswalks to current standards. The work will increase the service life of these roadways and reduce future maintenance costs.

All street segments will be milled and resurfaced with bituminous material and restriped - with the exception of Germantown Avenue, which is surfaced with historically-designated granite block pavers. Any ground disturbance will occur within the existing right-of-way and will be limited to the cartway and sidewalks in the various corridors. In most cases, pavement restoration in the disturbed areas will match existing pavement types.

Potential candidates for this resurfacing package include:

- Chestnut Hill Avenue, Seminole St. to Bethlehem Pike
- Seminole Avenue, Chestnut Hill Ave to St. Martins Ln.
- St. Martins Lane., Highland Ave. to Mermaid Ln.
- Mermaid Lane, St. Martins Ln. to McCallum St.
- McCallum Street, Mermaid Ln. to Allens Ln.
- Germantown Avenue, Bethlehem Pike to Rex Ave.
- Ogontz Avenue, Cheltenham Avenue to Belfield Avenue

PennDOT Improvement:

NHPP:

This project addresses a section of Cottman Avenue consisting of five lanes: two eastbound lanes, one center lane and two westbound lanes. This is a heavily trafficked commercial corridor is a concentration point for pedestrian-related crashes. It consists of design and construction of fiber optic signal interconnect as well as safety and transit improvements which also leverage and green storm water management infrastructure and pedestrian enhancements. The project seeks to improve safety and the user experience for pedestrians, transit riders and drivers within this busy transit hub. Currently, the center lane alternates between a dedicated left turn lane and a shared left turn lane. The project proposal calls for the construction of medians will lead to clearer definition of turn bays and more reliable traffic progression and safer pedestrian crossing and circulation. These segments have been chosen mitigate pedestrian activity with the effect on vehicular traffic. The medians will incorporate stormwater management practices contributing to environmental benefits as well.

The project will extend the City's fiber optic network along the Germantown Avenue commercial corridor serving the northwest section of the City including historic Germantown and Mt. Airy. The corridor is served by the longest transit Route in the City (SEPTA Route 23) which has been identified for potential restoration of trolley service. This is a prime location for future implementation of TSP. The project incorporates a number of pedestrian improvements including pedestrian countdown signals and LED pedestrian street lights to fill in five blocks cut out of previous pedestrian lighting projects because of funding limitations.

NHPP:

This project provides for technical and planning assistance to PennDOT District 6 for support in implementation of the I-95 Reconstruction Projects. DVRPC will be "on call" for quick-turnaround analysis or data collection tasks in support of specific and timely I-95 project planning needs. Tasks will include data collection, meeting and stakeholder coordination, and general research as needed. Subject areas include congestion mitigation strategies, as well as transit, Transportation Management Association, environmental, freight, historic, and bicycle/pedestrian issues. District 6 has limited planning staff, while DVRPC planning staff has multiple areas of expertise which are beneficial for this work and have been utilized in the past.

Tasks:

- 1.Facilitate discussion and prioritization with SEPTA on capital improvements to mitigate congestion on I-95 during and beyond the reconstruction project timeline; provide sketch-level benefit/cost analysis of proposed improvements.
- 2.Coordinate implementation of recommended strategies developed from the DVRPC Alternatives Development for Roosevelt Boulevard Transit Enhancements study.
- 3.Coordinate implementation of recommended strategies developed from the DVRPC Improving Non-motorized Access to Regional Rail Stations on the I-95 Corridor study.
- 4.Coordinate implementation of recommended strategies developed from the Bucks County Planning Commission on bicycle and pedestrian access to stations in Lower Bucks County on SEPTA's West Trenton Line.
- 5.Facilitate coordination between SEPTA, Amtrak, PennDOT, and other agencies.
- 6.Coordinate communications and outreach activities with the TMAs, particularly with TMAs in Center City, and Bucks and Delaware counties.
- 7.Assist with bicycle and pedestrian planning and coordination efforts in the I-95 corridor.
- 8.Assist with trail alignment and coordination efforts for trails along the I-95 corridor, especially for portions related to the East Coast Greenway.
- 9.Assist with environmental mitigation efforts and context sensitive planning related to the I-95 reconstruction projects.
- 10.Assist with coordination of historical preservation efforts related to the I-95 reconstruction projects.
- 11.Coordinate with freight industry representatives on construction activities and detour routes.
- 12.Provide mapping and Geographic Information Systems (GIS) support as requested.
- 13.Provide support in coordinating and developing legal agreements, as needed.

PROJECT MANAGER: EE/DVRPC/R. Gallagher

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

The City will implement a more cohesive design of the Chelten-Greene Plaza, as the plaza needs to be replaced. A stakeholder group of businesses, residents, and community leaders agreed upon the following guiding principles:

- 1) Create a gateway into Vernon Park and the Chelten Avenue business district;
- 2) Create a plaza space that feels larger, safer, and more open;
- 3) Provide adequate bus shelter space;
- 4) Connect the plaza to Vernon Park, both physically and visually; and
- 5) provide a safe route to school for approximately 450 students who attend the Imani Education Circle.

Charter School, a K-8th grade school located across the street from the site at 5612 Greene Street.

The existing plaza was constructed approximately 30 years ago. Currently, the plaza is in poor physical condition. Specific challenges include: a sunken portion that tends to collect litter and is generally unoccupied because it is perceived as dirty and unsafe; a lack of ADA-compliant curb ramps between the Plaza and adjacent blocks; and a lack of connection to Vernon Park, despite being directly adjacent.

The project was awarded \$370,000 regional TAP (TAU) funds from the 2016 TAP round, which was approved by the March 24, 2016 DVRPC Board. Approximately \$7.6 million was available for the five-county Southeastern Pennsylvania region.

PennDOT Class:

PennDOT Improvement:

NHPP:

This project will add site amenities to the Manayunk Bridge Trail which connects Philadelphia and Montgomery Counties: lighting, benches, planters and signage will provide for greater usage and safety. The Manayunk Bridge Trail connects Philadelphia to Lower Merion Township in Montgomery County over the Schuylkill River connecting the Schuylkill River Trail/Manayunk Canal Towpath/Main Street in Manayunk to Cynwyd Heritage Trail in Bala Cynwyd.

Project was awarded \$600,000 regional TAP (TAU) funds from the 2016 TAP round, which was approved by the March 24, 2016 DVRPC Board. Approximately \$7.6 million was available for the five-county Southeastern Pennsylvania region.

IMPROVEMENT Bicycle/Pedestrian Improvement

MUNICIPALITIES: Philadelphia City

FC:

AQ Code:2020M

PLAN CENTER:

IPD:

PROJECT MANAGER: EE/DVRPC/R. Gallagher

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

This project will fund construction of bicycle facility improvements throughout the City of Philadelphia (various locations). It proposes to convert over 27 lane miles into protected bicycle facilities by adding flexible delineator posts, a vertical element proven to act as a superior visual reference to clearly separate vehicle and bicycle space in the right of way. There are fifteen high priority bicycle corridors spread throughout the City identified for potential improvements as part of this project. These may include the following, subject to change:

1. The Spruce/Pine Streets Pair Protected Bicycle Lanes will add a vertical element to these bicycle lanes in Center City Philadelphia, which were the City's first pavement striped buffered bicycle lanes in 2009. These are a major east-west pair from 22nd Street to Front Street and connect to several bicycle routes and trails to the west, south, and north.
2. The South/Lombard Streets Protected Bicycle Lanes will add a vertical element to the pavement buffered lanes on the South Street Bridge, on South Street from 27th to 22nd, on 27th from Lombard Street to South Street, and on Lombard from 22nd to 27th. This is a major connection route east-west between University City and Center City, will significantly increase the safety of these bicycle lanes and encourage new users. This route is part of the highest Indego Bikeshare routes, as released by Indego tracking in fall 2015.
3. The 13th/10th Street Pair Protected Bicycle Lanes will add a vertical element to this north-south pair from Spring Garden Street to South Street through Center City Philadelphia. Portions of these streets are currently pavement striped buffered bike lanes and this is the only pavement buffered pair in Center City. Adding a vertical element on this highly visible route through Center City will encourage potential cyclists.
4. The Walnut Street Protected Bicycle Lane is an existing paved striped buffered bike lane that serves as the major west-bound cycling route from 22nd Street to 63rd Street in West Philadelphia. This is a major commuting route for employees and students in University City and a vertical element will increase safety along this route. There is often high speed vehicular traffic and significant turns and parking maneuvers. The presence of flexible delineator posts, even though spaced wider for parking and turning lanes, will calm vehicular traffic and increase roadway safety for all modes.
5. The Civic Center Boulevard Protected Contraflow Bicycle Lane is an existing paved striped buffered contraflow lane from Health Science Boulevard to Convention Boulevard adjacent to the Hospital of the University of Pennsylvania and the Children's Hospital of Philadelphia and was installed in summer of 2015. It currently functions as a contraflow lane but would be a safer facility with a vertical element, as there are vehicle blockage and other safety issues.
6. The 30th Street Protected Contraflow Bicycle Lane is an existing paved striped buffered contraflow lane on 30th Street between Market and Chestnut Streets adjacent to the IRS Building. It currently functions as an unprotected contraflow lane, but would be a safer facility with a vertical element, as there are vehicle blockage and other safety issues.
7. The Race Street Protected Bicycle Lane will be a protected right hand bicycle lane in area of excess roadway capacity between 9th Street and 5th Street. The project requires taking lane of vehicle traffic and will slow down the vehicular traffic eager to get on the Ben Franklin Bridge, give better cues to which lane people should be using, and make connections to high foot/bike trafficked destinations, like Franklin Square, office buildings, and the Ben Franklin Bridge Trail. The addition of a buffered bike lane here, along with reducing the number of lanes, will help calm traffic on this very wide segment of the street, without changing the curb locations. The protected bike lane on Race Street connects commercial and residential areas in Chinatown and Center City to commercial, office, and residential areas in Old City, in addition to the Benjamin Franklin Bridge Trail and Delaware River Trail.
8. The Torresdale/Frankford Avenues Two Way Protected Bicycle Lanes will connect the two gaps between segments of the Pennypack Creek Trail, which is currently on-road in these sections and on opposite sides of the Avenue. The roadway orientation of the trail at these crossings is an unsafe connection for trail users. The project requires taking 750' of sparsely used parking lane along Torresdale Avenue and approximately 200' of parking along Frankford Avenue.
9. Passyunk Avenue/Oregon Avenue Protected Bicycle Lanes on the Passyunk Avenue Bridge and at the Vare Avenue/Oregon Avenue approach in South Philadelphia.
10. Columbus Boulevard Protected Bicycle Lanes along Columbus Boulevard from Spring Garden to Race Street and Washington Avenue to Packer Avenue.
11. Parkside Avenue Protected Bicycle Lanes from 53rd Street to Wynnefield Avenue.

The Holme Avenue Bridge is a single span, closed spandrel concrete arch bridge that carries a four lane road and a striped median with flanking sidewalks over Wooden Bridge Run in Pennypack Park, Philadelphia. Construction on the bridge was completed in 1921. Reinforced concrete sidewalks were replaced in 2016 with the replacement of an adjacent bridge. The rehabilitation of the Holme Avenue Bridge will include sealing cracks; concrete repairs to arches, arch rings, spandrel walls, substructure units, and pylons as needed; select concrete repairs to retain integrity of the railing system; conserving bridge plaques; tree and vegetation removal; debris removal from the stream channel; rebuilding the drainage headwalls; and removal of concrete foundations in the stream channel.

PennDOT Class:

PennDOT Improvement:

NHPP:

The City of Philadelphia's has nearly 3,000 traffic signals distributed throughout the City of Philadelphia. Many of these signals were installed decades before computerized and centralized control systems were widely developed. The City has upgraded about 1,000 intersections to Type 170 controllers. Most of the Type 170 controllers are on high-volume arterial corridors and most are being linked to permit centralized control. The City also has dozens of ITS devices that will be brought on-line. The City has recently upgraded its KITS software system which provides the ability to controls these signals and devices, but needs to migrate the signals into the new software system. This new system will allow the City to control all Type 170 controllers and ITS equipment in the system (many through web access) and will increase the number of signal timing plans in each individual signal.

IMPROVEMENT Signal/ITS Improvements

MUNICIPALITIES: Philadelphia City

FC:

AQ Code:S6

PLAN CENTER:

IPD:

PROJECT MANAGER: Valerie Temino

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Safety evaluations and audits will occur at target locations where there are disproportionate numbers of crashes at intersections and corridors throughout the City. Evaluations will identify straight-forward means to correct issues and help target potential low cost safety improvements. Such low cost improvements will include pavement marking and signing, green bicycle conflict zones, rumble strips, semi-permanent curb extensions, and more. Reducing motor vehicle speeds to 25mph or less can significantly diminish severe and fatal pedestrian crashes. A toolbox of low cost traffic calming measures will also be employed together with clear warrants for their use. Low Cost Safety measures have been found to improve traffic safety for all users, especially pedestrians. Studies have shown that slower speeds in urban areas, result in fewer crashes in general, but also dramatically reduce severe and fatal pedestrian crashes when speeds are less than 25mph. In addition to pavement marking, signing, and signal retiming, other low-cost improvements can be found in the traffic calming toolbox, as per Philadelphia's Complete Streets manual as well as PennDOT's Publication 383, Traffic Calming Handbook. A combination of low cost measures including vertical and/or horizontal deflection as traffic calming will be employed as appropriate on a case by case basis. These measures are specifically designed to improve safety, enhance mobility, and improve air quality. When a street is perceived as safer to walk or ride bicycle, mode-share increases and simultaneously helps to reduce congestion and pollution caused by vehicle emissions.

This project will increase pedestrian safety through improved street lighting while promoting walkability within commercial and residential corridors. The project will help to encourage walkability after dark, helping to create a sense of place while reducing crime, improving the local economy, and boosting civic pride and engagement. LED Street lighting has proven to be a significantly better light source in terms of the expected maintenance, energy efficiency, and quality of light. Better street lighting, including sidewalks helps to improve personal safety and transportation safety, while also encouraging walking as a more favorable mode of transportation. Some LED lighting has already been installed in Philadelphia.

The scope of this project contains replacement/rehabilitation of the structure along with the existing bridge deck is proposed along with repairs to piers, abutments and other components of the substructure.

The I-76 Bridge carries I-76 along and over the Schuylkill River in the City of Philadelphia from University Avenue through Arch Street. Located adjacent to the 30th Street Regional Rail Station, this bridge carries a high volume of traffic and is an important interstate route for the local and regional needs of the greater Philadelphia area. As a result of the continued deterioration of the bridge deck and deck joints, several spalls were observed with exposed reinforcement which required immediate action by the Department.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

This project will fund construction of a series of safety improvements at the intersection of 53rd Street and Baltimore Avenue, adjacent to the Avery D Harrington School. Planned improvements include realigning the intersection, upgrading the intersection and transit stop to be ADA compliant, adding bump-outs at the corners to provide safe pedestrian refuge areas, upgrading traffic signal equipment and pedestrian countdown signals, and installing green stormwater infrastructure leveraging funds from the Philadelphia Water Department.

In the fall of 2015, PennDOT held a competitive round for statewide TAP funding. This project was one of 13 projects across the DVRPC region that was awarded funding in January 2017 through the statewide TAP program (MPMS #60560), receiving \$600,000 out of the \$9.4 million awarded to the region.

This project will include the design and construction of ADA ramps that were transitioned from other Federal Aid projects, including, but not limited to, Center City SE Quad Signals (MPMS #17655), Passyunk Ave Signals (MPMS #16987), 52nd St. Streetscape (MPMS #17829), Citywide Resurfacing 103 (MPMS #91837), and various streetscape projects; and as well as ramps located on Center City Philadelphia Federal Aid routes that were repaved with local funding. The ramps would have typically been included as design build items in the project contracts, however, in some instances, the urban context of the ADA ramp locations warrants further coordination or study. To allow the original construction projects to proceed in a timely fashion, these ramps were pulled from the original construction contracts, and will now be addressed as part of this transition project. This will allow the City to design and construct the ramps to current ADA requirements while providing for stairs, cellar doors, unique paving materials, adjacent historic properties and other considerations as necessary.

PennDOT Class:

PennDOT Improvement:

NHPP:

The Falls Road over Schuylkill River Bridge project will extend the useful life of the bridge as the bridge is currently considered Structurally Deficient, with a 5-ton posted weight limit and a sufficiency rating of 13, which will continue to deteriorate without rehabilitation.

The project will unfreeze and repair bearings, clean and paint the bridge superstructure, remove paint and rust using high pressure water, collect and properly dispose of lead based paint and tainted rust scale, paint structure with rust inhibiting paint to protect steel and encapsulate remaining "tight" lead based paint.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

NHPP:

The purpose of this project is to rehabilitate the MLK Drive (formerly West River Drive/Spring Garden St. Lower) Bridge over the Schuylkill River near Center City Philadelphia. Work will include complete bridge deck replacement, new expansion joints, new scuppers and down spouting, new bearings, bridge painting, and limited substructure repair. The single 5 ft. sidewalk, used by both pedestrians and bicycles, will be widened to accommodate a normal width, multi-use bike path. The bridge is currently posted for 33 tons with a sufficiency rating of 48. This work is necessary to remove the current posting and prevent continued deterioration that could lead to further restrictions.

A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance.

The consultant will provide for the necessary arterial traffic signals/ITS design to supplement the I-76 Integrated Corridor Management Project. This project will develop all of the necessary design and construction documentation needed to modernize the traffic signal systems and ITS devices in the City of Philadelphia based on the I-76 Traffic Signal Management Plan, Memorandum of Understanding (MOU) Agreement, concept of operations and system engineering report completed under different agreements. The targeted corridors include: Ridge Avenue, Henry Avenue, Belmont Avenue, and U.S. 1/City Avenue.

This agreement includes but is not limited to data collection, traffic analysis, preliminary engineering, environmental clearances, final design, plan development, PS&E requirements, right-of-way acquisition services and consultation during construction. Also as indicated under services, coordination and collaboration is required with the following other agreements:

- E03582 - Green Light-Go Technical Support - Southeastern Region
 - E03803 -76 Integrated Corridor Management Project
 - E03918 Comprehensive ATMS of I-76 Parallel Arterial Corridors Design Support Agreement (Montgomery County)
 - E03920 - District 6 Transportation Systems Management and Operations (TSMO) Support Contract
 - Other identified ECMS, Highway Occupancy Permit (HOP) or Municipal Projects identified by the Department
- The consultant will manage assignments with routine project status meetings to identify the next steps of the project.

Frankford Avenue, otherwise known as State Route (SR) 2007/US 13. This study will analyze the conditions along Frankford Avenue between Cheltenham Avenue and Rhawn Street with the goal of improving safety and predictability for all users. It will examine opportunities to slow vehicular traffic, improve pedestrian safety and walkability, mitigate current loading challenges, designate space for bicyclists, and integrate stormwater management. The plaza at the intersection of Frankford and Cottman Avenues serves as a gathering space for residents during special events, which can range in size from small festivals to large gatherings like the Philadelphia Eagles Super Bowl celebration, when approximately 30,000 fans gathered there to celebrate. Given these pedestrian concerns, this study will also focus on multimodal operations at and around the Cottman and Frankford Avenue plaza. It will explore parking issues along the corridor as well as the impact of any recommendations on the existing public transportation that currently uses Frankford Avenue, particularly the Route 66 trackless trolley.

PennDOT Improvement: Congestion Reduction

NHPP:

These congestion mitigation efforts cover administration, business outreach efforts by contracted agencies, and the marketing of the Mobility Alternatives Program (MAP), the Share a Ride Program (SAR), and the Emergency Ride Home Program (ERH). Geared to employers, MAP is an outreach and education program overseen by DVRPC to provide information to employers and commuters about options to the single occupant auto for commuting to work. Most of the MAP contractors have the same work program, and the uniform marketing materials are created and produced by DVRPC. SAR is a computerized ride matching program available to all commuters with jobs in the DVRPC region. The system provides all available transit options to the applicant before any potential car or vanpool matches. SAR is a matching system only; once match information is provided to applicants, the individuals are responsible for making mutually-agreeable arrangements on their own. To complement SAR, the Emergency Ride Home Program makes rental-car or taxi transportation available in emergency situations.

Funds are allocated accordingly:\$200,800 CAQ/\$50,200 Match (\$34,200 State Appropriations 581/\$16,000 RideECO) for DVRPC UPWP; \$53,960 CAQ to each of the 5 regional TMA's; \$120,000 CAQ to SEPTA; \$62,200 to City of Philadelphia/Clean Air Council.

NHPP:

This project covers the CSX Trenton line, from Park Junction to the Delaware River at Yardley, via West Falls, Newtown Junction, and Woodbourne. Through the Philadelphia region, this rail line does not have adequate vertical clearances to accommodate double stack intermodal cars or tri-level auto racks, preventing full rail utilization for north-south freight moves and causing bottlenecks for area shippers and port facilities.

At approximately 16 locations, raise overhead highway bridges, lower existing tracks, and/or adjust overhead catenary to provide a continuous vertical clearance of 20 feet and 2 inches.

This project received a TEA 21 earmark PA ID#127 for \$5,000,000, a portion of which was used for design work.

This project is integral to the Delaware Valley Freight Corridors initiative.

Transportation Management Associations (TMA's) help the region address demand for the region's transportation system. They are public-private partnerships that provide a forum to resolve transportation issues in their service areas. Services include a range of transportation improvement options, including task forces, employer and construction project shuttles, advocacy, and congestion reduction assistance to employers along corridors and in municipalities. TMA's work closely with PennDOT to keep businesses connected and informed about construction projects. Because they actively promote congestion reduction measures and transit use, the TMAs help to lower the need for new highway capacity. Each TMA contractor has a work program tailored to the transportation issues and needs of their constituencies and territories. Work programs are developed collaboratively with PennDOT, DVRPC, and their respective County/City Planning departments.

MPMS# 48201 *DVRPC Competitive CMAQ Program*

LIMITS Region-wide

No Let Date

IMPROVEMENT Other

MUNICIPALITIES: Various

FC:

AQ Code:NRS

PLAN CENTER:

IPD:

PROJECT MANAGER:

CMP: Not SOV Capacity Adding

PennDOT Class: Congestion Reduction

PennDOT Improvement: Congestion Reduction

NHPP:

The Congestion Mitigation and Air Quality Improvement Program (CMAQ) was established by ISTEA and continued under TEA-21, SAFETEA-LU, and MAP-21. CMAQ funds are allocated to the states for use in non-attainment and maintenance areas for projects that contribute to the attainment of the Clean Air Act standards by reducing emissions from highway sources. Project types that are eligible for CMAQ funding include bicycle and pedestrian facilities; traffic flow improvements; ridesharing and other demand management programs; alternative fuel vehicles; and public transit improvements.

During a round of the DVRPC Competitive CMAQ Program, a call for projects goes out, applications are submitted, and candidate projects are ranked and selected by the DVRPC Board based on their emissions reduction potential, as well as other criteria such as cost-effectiveness, ease of implementation, project readiness, and sponsor commitment to provide matching funds.

The following projects selected in the calendar year 2011-2012 Competitive CMAQ Program will have funds drawn down from this Line Item at the appropriate time:

- MPMS #96221 - Multi-modal Access to New Britain Train Station -\$212,000 (\$169,600 CMAQ/ \$42,400 Matching funds)
- MPMS #96215 - City Avenue Adaptive Signals - \$1,143,500 (\$800,000 CMAQ/ \$343,500 Matching funds)
- MPMS #96222 - Enhanced Bike Facility Connection between Gray's Ferry and Bartram's Garden - \$600,000 (\$400,000 CMAQ/ \$200,000 Matching funds)
- MPMS #96227 - Traffic Operations Center Cameras - \$600,000 (\$480,000 CMAQ/ \$120,000 Matching funds)
- MPMS# 96238 - Upper Merion to Bridgeport Train Station Pedestrian Facilities Improvements - \$260,253 CMAQ/ \$304,832 Matching funds)
- MPMS# 96240 - Park Road Trail - \$1,455,908 (\$764,726 CMAQ/ \$691,182 Matching funds)

The following projects selected in the calendar year 2016 Competitive CMAQ Program will have funds drawn down from this Line Item at the appropriate time:

- 1) MPMS# 107636 - Neshaminy Greenway Trail -\$2,279,000 (\$1,823,000 CMAQ/ \$456,000 Matching funds)
- 2) MPMS# 107630 - Paoli Pike Trail Segment D-E -\$2,415,000 (\$1,736,000 CMAQ/ \$679,400 Matching funds)
- 3) MPMS# 107652 - US 202/US 1 ITS Corridor -\$3,300,000 (\$3,300,000 CMAQ/ State Matching funds)
- 4) MPMS# 107642 - Smithbridge Rd. Corridor Improvement Project -\$3,082,500 (\$1,589,500 CMAQ/ \$438,000 Matching funds/\$1,055,000 HSIP)
- 5) MPMS# 107639 - Installation of Adaptive Signal Control Along Route 3 -\$700,000 (\$560,000 CMAQ/ \$140,000 Matching funds)
- 6) MPMS# 107634 - Pedestrian Enhancements for Media Borough -\$909,818 (\$727,854 CMAQ/ \$181,964 Matching funds)
- 7) MPMS# 107649 - Connecting Wallingford to Mass Transit -\$471,162 (\$370,168 CMAQ/ \$100,994 Matching funds)
- 8) MPMS# 107650 - Easton Road Traffic Signal System Project -\$975,244 (\$780,195 CMAQ/ \$195,049 Matching funds)
- 9) MPMS# 107644 - Fayette Street Traffic Signal Improvements – Phase 2 -\$870,999 (\$799,606 CMAQ/ \$71,393 Matching funds)
- 10) MPMS# 107640 - Route 463 Traffic Signal System Project -\$1,141,450 (\$913,160 CMAQ/ \$228,290 Matching funds)
- 11) MPMS# 107646 - West Main Street Traffic Signal Improvements -\$551,455 (\$487,825 CMAQ/ \$63,630 Matching funds)
- 12) MPMS# 107633 - Plymouth Township CNG -\$644,944 (\$515,955 CMAQ/ \$128,989 Matching funds)
- 13) MPMS# 107654 - Advancing CNG in Philadelphia -\$7,154,000 (\$2,000,000 CMAQ/ \$3,350,000 Matching funds)
- 14) MPMS# 107637 - Ramping up to Rapid Transit on Roosevelt Boulevard -\$2,989,500 (\$1,999,500 CMAQ/ \$990,000 Matching funds)
- 15) MPMS# 107648 - Reformatting N. 5th Street as a Complete Street -\$2,575,000 (\$2,020,000 CMAQ/ \$555,000 Matching funds)
- 16) MPMS# 107632 - Fox Chase Lorimer Trail -\$1,004,700 (\$868,700 CMAQ/ \$136,000 Matching funds)
- 17) MPMS# 107631 - Navy Yard Contra Flow Loop Shuttle -\$845,040 (\$416,280 CMAQ/ \$428,760 Matching funds)

Safety projects eligible for HSIP (Highway Safety Improvement Program) funds will be undertaken at various locations across the five county region. Projects can be 100% federally funded as allowed by the use of Toll Credits for match.

Individual project funding has been drawn down for the following projects:

- MPMS #57625 - Route 232 Swamp Road Safety Improvements - Bucks County - \$500,000 for Final Design, \$252,000 for Utility
- MPMS #85949 – SR 896 Safety Improvements – Chester County - \$1,645,000 for Preliminary Engineering
- MPMS #85417 - Allegheny Avenue Safety Improvements –Philadelphia - \$1,190,000 for Preliminary Engineering, \$955,000 for Final Design, \$200,000 for Utility, \$7,629,000 for Construction
- MPMS #85419 - Erie Ave: Broad St. – K St. – Philadelphia - \$600,000 for Preliminary Engineering, \$350,000 for Final Design, \$475,000 for Utility, \$4,476,900 for Construction
- MPMS #80042 - PA 100 Corridor Safety Improvements - \$178,000 for Preliminary Engineering, \$477,000 for Final Design, \$151,000 for ROW, \$5,800,000 for Construction
- MPMS #85415 - Olney Ave Safety Improvements - \$850,000 for Preliminary engineering, \$728,000 for Final Design, \$5,004,000 for Construction

Remaining funds that will be used to advance the following projects to be drawn down at the appropriate time and to fund selected improvements identified through Regional Safety Audits:

Bucks County:

MPMS #57625 - Route 232 Swamp Road Safety Improvements - \$3,501,000 CON

Chester County:

MPMS #80042 - PA 100 Corridor Safety Improvements – \$6,500,000 CON

MPMS #85949 – SR 896 Safety Improvements – \$1,000,000 ROW/ \$250,000 UTL/ \$8,200,000 CON

Delaware County:

MPMS #48168 - Baltimore Pike Signals – Project was let for construction on 4/17/2014.

MPSM #107642 - Smithbridge Road Corridor - \$3,082,500 (\$1,589,500 CMAQ/ \$438,000 Matching funds/\$1,055,000 HSIP) CON

Philadelphia:

MPMS #85417 - Allegheny Avenue Safety Improvements – \$200,000 UTL/ \$100,000 ROW/ \$7,000,000 CON

MPMS #85415 - Olney Avenue Safety Improvements –Project was let for construction on 5/21/2015

MPMS #85419 - Erie Ave: Broad St. – K St. –Project was let for construction on 7/16/2015

MPMS #80104 – Henry Ave. Corridor Safety Improvements, Phase 1 –\$1,200,000 FD/ \$100,000 UTL/ \$100,000 ROW/ \$5,500,000 CON

MUNICIPALITIES: Various

FC:

AQ Code:NRS

PLAN CENTER:

IPD:

PROJECT MANAGER: TRAFF

CMP:

PennDOT Class: Bicycle/Pedestrian

PennDOT Improvement: Bicycle/Pedestrian

NHPP:

The purposes of this project are to (1) place an engineering consultant on retainer to undertake the necessary design work to retrofit bike lanes and bicycle-friendly shoulders where appropriate, coincident with resurfacing projects and (2) maintain existing and future bicycle facilities, including installation, maintenance, and replacement of striping and damaged and missing signs. Work would include bike lanes, edge line striping, signs, and revising traffic signal permit drawings to continue edge line revisions through signalized intersections. Work would be limited to Bucks, Chester, Delaware, and Montgomery counties.

There is a collaborative process in place with the four counties, PennDOT District 6-0, DVRPC, and the Bicycle Coalition of Greater Philadelphia which has developed potential projects in corridors with bicycling activity or where there is a latent demand for bicycling if bicycle-friendly facilities were provided. Continuation of this process will permit this funding to be used on the projects already developed or other projects that the group may develop.

NHPP:

The Transportation and Community Development Initiative (TCDI) provides a mechanism for the individual municipalities of the Delaware Valley to undertake locally-directed actions to improve their communities, which in turn implements their local and county comprehensive plans and supports the goals and vision of the regional plan. Pennsylvania and New Jersey, as well as a number of counties within the region, have programs now underway to support community revitalization.

The regional Transportation and Community Development Initiative seeks to support and leverage those programs, by providing funding of up to \$100,000 in selected municipalities to undertake planning, analysis or design initiatives for projects or programs which enhance development or redevelopment and improve the efficiency or enhance the regional transportation system. A 20% cash or in-kind match is required.

The program is targeted to the core cities, inner-ring suburbs, and older boroughs of the region that have lost jobs and population and are in need of assistance to generate growth and redevelopment. Identified census tract areas in 75 southeastern Pennsylvania municipalities as well as much of the city of Philadelphia, are eligible to apply for TCDI funding. Projects will be selected on a competitive basis and designated by the DVRPC Board.

FY13 Funds are programmed for projects selected as part of Round 8, 2014/2015. Funds are made available for projects in order to accommodate the program operating on an every other year cycle. This activity is a component of the DVRPC Work Program (UPWP).

PLAN CENTER:

IPD:

PROJECT MANAGER: L. Guarini

CMP: Not SOV Capacity Adding

PennDOT Class: Reserve Line Item

PennDOT Improvement: Reserve Line Item

NHPP:

This line item sets aside the funding allocated by FHWA for the FAST Act's Surface Transportation Block Grant Set-a-Side for the continuation of the Transportation Alternatives Program (TAP) in the DVRPC region. The TAP Program funds "non-traditional" projects that enhance the transportation experience, mitigate the impacts of transportation facilities on communities and the environment, and enhance community character through transportation-related improvements. Federal law sets up a direct allocation of TAP funds to urbanized areas with populations greater than 200,000, and all TAP funds must be awarded through a competitive process whether the funds be the regional MPO funds or from the statewide allocation. For the DVRPC regional funds, priority has been established for bicycle and pedestrian facilities, conversion of abandoned railway corridors to trails, and storm-water management projects.

The FAST Act apportions \$3,857,000 TAP funds in FY17, and \$3,932,000 TAP funds annually, after FY2017, directly to the DVRPC southeastern Pennsylvania region for use in selecting projects on a competitive basis. A recent competitive round (2017 Round) of three years' worth of MPO funding occurred in Fall of 2017, with final projects awarded in January 2018. Selected projects will be assigned an individual MPMS project number and description in the TIP, and funding will be drawn down from this line item and programmed at the appropriate time.

The following projects were approved through the TA Set-Aside program in Winter 2018:

- Bucks – Neshaminy Greenway Trail (Core Creek Park to Woodbourne Road) – MPMS #TBD - \$995,000
- Bucks – Iron Work Creek Sidewalk – MPMS #TBD – \$894,000
- Chester – Kennett Area Safer Active Transportation Routes – MPMS #TBD - \$915,000
- Chester – Paoli Trail, Segment A – MPMS #TBD - \$483,000
- Delaware – Pennsy Trail – Phase II Improvements – MPMS #TBD - \$1,163,000
- Montgomery – Jenkintown to Pennypack Trail – MPMS #TBD - \$715,000
- Montgomery – Parkside Cynwyd Trail Extension – MPMS #TBD - \$534,000
- Philadelphia – North Broad Street – Vision Zero Priority Corridor – MPMS #TBD - \$300,000
- Philadelphia – Renewing Philadelphia's Historic Streets – MPMS #TBD - \$1,000,000
- Philadelphia – Restoration of Historic Shawmont Station – MPMS #TBD - \$1,000,000

\$4,000,000 of the Winter 2018 solicitation is to be used for regionally significant trail projects in the future, including projects in the Circuit Line Item – MPMS #105291.

The following projects were approved through the TAP program in Spring 2016:

- Bucks – Neshaminy Greenway Trail (Bristol to Upper State) – MPMS #102830 - \$1,255,000
- Chester – Paoli Pike Trail, Segment C – MPMS #107176 - \$1,000,000
- Delaware – Moore Road Sidewalk Project – MPMS #107177 - \$825,000
- Delaware – Springfield Township Sidewalk Improvements – MPMS #107178 - \$280,000
- Montgomery – FWOP, Cross County Trail Final Segment – MPMS #107179 - \$750,000
- Montgomery – Powerline Trail Connection – Phase 1 – MPMS #107180 - \$850,000
- Philadelphia – Chetlén-Greene Plaza Reconstruction – MPMS #107181 - \$370,000
- Philadelphia – City of Philadelphia SRTS (Non-Infrastructure) – MPMS #107182 - \$450,000
- Philadelphia – Make Way for Children, Expanding Ped. Infrastructure – MPMS #107183 - \$950,000
- Philadelphia – Manayunk Bridge Trail Site Amenities – MPMS #107197 - \$600,000
- Philadelphia – Safe Spaces for Cyclists: Building a Protected Bicycle Network – MPMS #107198 - \$300,000

The following projects were approved through the TAP program in Spring 2014:

- Bucks – Neshaminy Greenway Trail to Lenape Lane – MPMS # - \$800,000
- Bucks – Solebury Route 202 Gateway Trail – MPMS #102831 - \$980,859
- ChesCo – Kennett and New Garden Township Sidewalk Project – MPMS #102832 - \$850,000
- ChesCo – Village of Eagle Trail Connections – MPMS #102833 - \$560,000
- DelCo – Pedestrian and Bicycle Accessibility Enhancements – MPMS #102834 - \$420,000
- DelCo – Hillside Road Pedestrian Safety Improvements – MPMS #102835 - \$530,000
- DelCo – Nether Providence Township Sidewalks (SRTSF) – Round 1 – MPMS #87119 - \$225,000
- MontCo – Walk and Bike Pottstown Phase 1 & 2 – MPMS #102836 - \$1,000,000
- MontCo – Liberty Bell Trail Connection – MPMS #102837 - \$635,000

PennDOT Class: Intelligent Transportation System **PennDOT Improvement:** Intelligent Transportation System

NHPP:

DVRPC's Intelligent Transportation System (ITS) program encompasses a wide range of activities including the ITS Technical Task Force, incident management programs, ITS architecture development, training programs for ITS operators and emergency response personnel, and technical assistance to agencies. Its centerpiece is the Regional Integrated Multi-modal Information Sharing (RIMIS) concept which will implement an Information Exchange Network (IEN) that will function as the communications backbone among operation centers throughout the region. This system would be used to notify agencies about incidents or unusual conditions which affect them, and will allow them to share resources (e.g., variable message signs) and coordinate a unified response. Information will be made available to the public via traffic reporting agencies. This activity is a component of the DVRPC Work Program (UPWP).

This project is integral to the Delaware Valley Freight Corridors initiative.

CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 3A, 3B, 3C

PennDOT Class: Intelligent Transportation System **PennDOT Improvement:** Intelligent Transportation System

NHPP: Y

This project will implement a Variable Speed Limit System and a Queue Detection System along I-76 from I-276 to US 1. The new Variable Speed Limit and Queue Detection systems will utilize existing fiber optic communications infrastructure and existing ITS equipment supplemented with additional equipment for these new systems. The purpose is to improve safety and traffic operations along the corridor. Over 2100 crashes were reported along this roadway section between 2009 and 2013 with 66% being rear-end crashes. Variable Speed Limits are used to maximize capacity with uniform travel speeds, provide safer travel speeds for conditions, and reduce rear-end collisions. Queue Detection is used to reduce sudden stopping, reduce bottlenecks from rear end crashes and promote more uniform driver behavior. These systems are anticipated to reduce total number of crashes, accelerate response to crashes, alert drivers to emerging incidents, and reduce delays along the corridor.

This project was funded by a \$3,200,000 SAFETEA-LU Earmark (PA ID# 361/FED ID# 0878)

AQ Code:S7

PLAN CENTER:

IPD:

PROJECT MANAGER: Goerge Dunheimer ADE CONSTR **CMP:** Not SOV Capacity Adding

PennDOT Class: Intelligent Transportation System **PennDOT Improvement:** Intelligent Transportation System

NHPP: Y

The project will include design of ITS devices along I-95 from the Delaware state line to Broad Street and along the I-476 corridor from I-95 to the St. David's interchange. The ITS devices will enable PennDOT to monitor I-95 and I-476, facilitate more efficient incident response and transportation management, and provide valuable information to travelers to improve the safety and efficiency of their experience on the I-95 corridor. The devices and locations scoped for this project will fit into PennDOT's overall I-95 Interstate ITS Completion Plan. The devices will be connected into PennDOT's fiber optic communications system and ultimately managed from PennDOT's Regional Transportation Management Center, located in the District 6-0 offices in King of Prussia, PA. The project also enhances PennDOT's cooperation and collaboration with regional stakeholders located in the study area, such as Delaware County, and the City of Philadelphia Streets Department, Sports Complex and Airport.

I-95, Section ITC (DelawareState Line to Girard Point Bridge)

This section of expressway spans 16 miles and consists of primarily 3 through lanes traveling in each direction. 14 interchanges, including an interstate-to-interstate interchange at Exit 7 (I-95/I-476) as well as the exit for the Philadelphia International Airport (Exit 10) are located in this section. As of 2007, the average AADT through this section was approximately 146,000 vehicles. ITS devices currently deployed include 2 north-facing DMS located north of PA-420 and north of Exit 9 respectively and 3 CCTV cameras located at the I-95/I-476 Interchange, Island Avenue, and Enterprise Avenue. In order to provide complete ITS coverage through this section, the I-95 Interstate ITS Completion Plan anticipates that additional ITS devices will be required. Five (5) DMS are envisioned, as well as 17 CCTV, 31 vehicle detectors, 16 AVI E-ZPass tag readers, and communications upgrades.

I-476 (I-95 to St. David's Interchange)

The I-476 reconstruction has already been awarded to a contractor for construction. As part of the I-476 RES project, several ITS devices are designed for deployment to provide full coverage along the I-476 corridor. However, the design did not include DMS signs and tag readers between I-95 and St. David's interchange. This project will design DMS signs and tag readers between I-95 and St. David's interchange, which will provide complete coverage along the I-476 corridor. 8 DMS are envisioned, as well as 13 AVI E-ZPass tag readers and communications upgrades.

NHPP:

This signal re-timing program provides for the evaluation of existing signals along an identified corridor, with the goal of improving traffic operations along said corridor through revised signal timing plans. The program was implemented first using corridors identified in the City of Philadelphia, with the goal of expanding a successful program to other counties. The selected vendor would collect current traffic data, compare it against the functioning signal timing, and prepare and implement a revised signal timing plan on approval of the PennDOT's District 6.

NHPP:

DVRPC continually strives to keep its travel simulation models up to date to insure the accuracy of travel forecasts and to respond to new forecasting requirements associated with the FTA New Starts program, FHWA conformity demonstration requirements, and EPA clean air amendments and other environmental regulations. DVRPC's travel simulation process requires periodic updating. This includes updating the travel simulation models, the software that runs the models, and the data that the models are based on. This project will make upgrades in all three areas. The travel models will be upgraded to bring them in line with the state of the art/science of demand modeling. The various data required to operate, calibrate, and validate the model, including socioeconomic data, traffic data, and travel surveys, will be updated as well. This activity is a component of the DVRPC Work Program (UPWP).

MUNICIPALITIES:

FC:

AQ Code:S19

PLAN CENTER: Suburban Center

IPD: 2

PROJECT MANAGER: HNTB/NV

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Nine (9) structurally deficient bridges in Bucks, Chester and Montgomery Counties will be rehabilitated. Improvements are to include bridge deck repairs, latex concrete overlays, and structure repairs with minimal roadway improvement. An estimated service life extension of fifteen (15) years is anticipated.

The bridges are as follows:

Chester County:

- 1) US 1 Bypass (SB) over Church Road (Bridge Key 9907) in New Garden Township;
- 2) University Road over US 1 Bypass (Bridge Key 10575) in Upper Oxford Township;
- 3) Hayesville Road (T342) over US 1 Bypass (Bridge Key 9891) in Lower Oxford Township;

Montgomery County:

- 4) Cowpath Road over east Branch Perkiomen Creek (Bridge Key 27542) in Franconia Township;
- 5) Farmington Avenue over PA 100 (Bridge Key 27862) in Pottsgrove Township
- 6) Gypsy Lane (T711) over Schuylkill Expressway (Bridge Key 27239) in Upper Merion Township;
- 7) Spring Garden Street over Schuylkill Expressway (Bridge Key 27254) in West Conshohocken Borough.

Bucks County:

- 8) Thatcher Road over Tohickon Creek (Bridge Key 7413) in Richland Township;
- 9) Thatcher Road over Kimples Creek (Bridge Key 7414) in Haycock Township.

Work to be performed will additionally include District-wide "On-Demand" bridge repairs. The scope of work will not change the typical section of the roadways or increase their capacities. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Environmental Determination Documentation clearance.

NHPP:

This project is a breakout of MPMS# 88616, and will operate in the suburban counties of Bucks, Chester, Delaware, and Montgomery as part of the Expressway Service Patrol contract for an additional two years. The program will provide for the operation of emergency service patrols on congested state highways to detect and clear incidents rapidly by providing emergency assistance to stranded motorists. Approximately half of all delays experienced by highway users in congested areas are caused by traffic accidents, vehicle breakdowns, and other incidents. Prompt incident management programs such as this, can reduce delay's significantly. Service will be provided on 50 linear miles including: I-76 from Philadelphia to PA Turnpike; I-95 from the New Jersey State Line to the Bucks County line; I-476 from I-95 to the PA Turnpike; US Route 202 from I-76 to US 30; US Route 422 from Route 202 to Royersford; PA 309 from PA 63 to Easton Road; and US 30 from Business Route 30 to PA 10.

A separate contract for the Philadelphia Expressway Service Patrol (MPMS #91490) is currently programmed on the DVRPC TIP and utilizes federal funding.

This line item sets aside funding allocated for county owned bridges that are in need of repair in the DVRPC region. Funds will be broken out and drawn down at the appropriate time for projects that were selected in the fall of 2012 (Round 1), and summer of 2016 (Round 2). Projects were selected for using 20% local match. State or federal shares will be programmed as appropriate.

Woodland Avenue over SEPTA (MPMS #98232) was programed with 100% federal funds, for preliminary engineering, final design, and construction to allow SEPTA to manage the project on behalf of the City of Philadelphia. This project was drawn down in the FY2013 TIP.

Anticipated programming and costs of projects include:

Round 1 (fall 2012 selections):

Bucks County

-Clymer Avenue Bridge over Mill Creek (MPMS #92872), West Rockhill Township, FY14 FD \$59,000, FY14 CON \$1,194,000. Total cost \$1,253,000. This is a retro-reimbursement project. Drawn down in FY14 of the FY2013 TIP.

-Branch Road over E. Branch Perkiomen Creek, (MPMS #102666), Bridge #239, Bridge ID # 09700904310239, East Rockhill Twp, PE \$10,000, FD \$60,000, Construction \$535,000. The total cost of this project is \$605,000. This is a retro-reimbursement project. Drawn down in FY15 of the FY2015 TIP.

-Quarry Road over Morris Run, (MPMS #102667), Bridge #244, Bridge ID #09700904210244

PE \$5,000, FD \$25,000, Construction \$335,000. The total cost of this project is \$365,000. This is a retro-reimbursement project. Drawn down in FY15 of the FY2015 TIP.

-Strock's Grove Road Bridge over Beaver Creek Bridge (MPMS #98221), Nockamixon Township, FY16 PE \$300,000. FY19 FD \$375,000, FY21 ROW \$90,000, FY22 UTL \$50,000, FY24 CON \$2,000,000. The total cost of this project is \$2,630,000.

Chester County

-Sunnyside Road Bridge over East Penn Railway (MPMS #78521) in Penn Township FY14 FD \$120,000, FY14 ROW \$31,000, FY14 CON \$1,021,000. The total cost of the project is \$1,172,000. This is a retro-reimbursement project. Drawn down in FY14 of the FY2013 TIP.

-Creek Road Bridge over Pickering Creek (MPMS #98223) in Schuylkill Township, FY14 PE \$300,000, FY15 FD \$300,000. FY20 ROW \$75,000, FY22 CON \$1,904,000. The total cost of this project is \$2,579,000.

-Spring City Road over Stony Run (MPMS #98224) in East Pikeland Township, FY15 PE \$300,000, FY18 FD \$200,000, FY20 ROW \$40,000, FY22 CON \$1,400,000. The total cost of this project is \$1,940,000.

Delaware County

-Michigan Avenue over Little Crum Creek (MPMS #98216) in Ridley Township, FY14 PE \$350,000, FY17 FD \$250,000, FY17 ROW \$50,000, FY17 UTL \$50,000, FY19 CON \$2,200,000. The total cost of this project is \$2,900,000.

-Hilldale Bridge (MPMS #98217) in Lansdowne Borough, FY16 PE \$410,000, FY18 FD \$300,000, FY18 ROW \$50,000, FY18 UTL \$50,000, FY20 CON 2,850,000. The total cost of this project is \$3,660,000.

-South Avenue over Muckinipattis Creek (Mulford Bridge) (MPMS #98218) in Glenolden Borough, FY17 PE \$400,000, FY18 FD \$300,000, FY18 ROW \$50,000 FY18 UTL \$50,000, FY20 CON \$2,900,000. The total cost of this project is \$3,700,000.

Montgomery County

-Butler Pike over Prophecy Creek (MPMS #98225) in Upper Dublin Township, FY14 PE \$350,000, FY18 FD \$300,000, FY21 ROW \$25,000, FY22 UTL \$50,000, FY24 CON \$850,000. The total cost of this project is \$1,575,000

-Maple Avenue Bridge (MPMS #98226) in Hatfield Township, FY16 FD \$143,000, FY16 CON \$432,000. The total cost of this project is \$575,000. This is a retro-reimbursement project. Drawn down in FY15 of the FY2015 TIP.

-Allendale Road Bridge (MPMS #98227) in Upper Merion Township FY16 FD \$350,000, FY16 CON \$650,000. The total cost of this project is \$1,000,000. This is a retro-reimbursement project. Drawn down in FY15 of the FY2015 TIP.

-Store Road Bridge (MPMS #98228) in Lower Salford Township FY16 PE \$11,000, FY16 FD \$80,000, FY16 CON \$300,000. The total cost of this project is \$391,000. This is a retro-reimbursement project. Drawn down in FY16 of the FY2015 TIP.

City of Philadelphia

-59th Street over Amtrak (MPMS #98229) FY14 PE \$960,000, FY18 FD \$640,000, FY24 CON \$8,000,000. The total cost of this project is \$9,600,000;

-Woodland Avenue over SEPTA (MPMS #98232) FY14 PE of \$480,000, FY15 FD \$320,000, FY18 CON \$952,000, FY19 CON \$2,000,000,

Pennsylvania - Highway Program (Status: TIP)

Various

FY20 CON \$464,000, FY21 CON \$584,000. The total cost of this project is \$4,800,000. Drawn down in FY14 of the FY2013 TIP.
 -Tabor Road over Tacony Creek (MPMS #98230) FY15 PE \$240,000, FY18 FD \$160,000, FY24 CON \$2,000,000. The total cost of this project is \$2,400,000.

Round 2 (summer 2016 selections):
 MPMS #s will be created once invoices are received by PennDOT.

Bucks County

-Milford Square Pike over Unami Creek - CB #252 (MPMS #TBD), Milford Township,
 PE \$15,000, FD \$50,000, CON \$550,000. Total cost \$400,000. This is a retro-reimbursement project.
 -Frosty Hollow Road over Mill Creek - CB #15 (MPMS #TBD), Middletown Township,
 PE \$25,000, FD \$75,000, ROW \$25,000, CON \$550,000. Total cost \$675,000. This is a retro-reimbursement project.
 -Mill Creek Road over Martins Creek - CB #250 (MPMS #TBD), Falls Township,
 PE \$75,000, FD \$250,000, ROW \$50,000, CON \$2,200,000. Total cost \$2,625,000. This is a retro-reimbursement project.

Chester County

-State Street in Avondale - CB #289 (MPMS #TBD), Avondale Borough,
 PE \$100,000, FD \$250,000, ROW \$20,000, UTL \$150,000 CON \$1,800,000. Total cost \$2,320,000. This is a retro-reimbursement project.
 -Mill Road in Tredyffrin Twp - CB #167 (MPMS #TBD), Tredyffrin Township,
 Study \$150,000, PE \$300,000, FD \$300,000, ROW \$75,000, UTL \$100,000, CON \$2,000,000. Total cost \$2,925,000. This is a retro-reimbursement project.
 -Bertolet School Road - CB #196 (MPMS #TBD), East Vincent Township,
 Study \$200,000, PE \$450,000, FD \$300,000, ROW \$75,000, UTL \$100,000, CON \$2,775,000. Total cost \$3,900,000. This is a retro-reimbursement project.

Delaware County

-Paper Mill Road over Carby Creek (Worrall Bridge) - CB #221 (MPMS #TBD), Newtown Township,
 PE \$200,000, FD \$100,000, ROW \$15,000, CON \$1,100,000. Total cost \$1,415,000. This is a retro-reimbursement project.
 -Fox's Bank Bridge - CB #94 (MPMS #TBD), Middletown Township,
 PE \$400,000, FD \$400,000, ROW \$50,000, CON \$2,500,000. Total cost \$3,350,000. This is a retro-reimbursement project.

Mongtomgery County

-Moreland Avenue over Branch Pennypack Creek - CB #38 (MPMS #TBD), Hatboro Borough,
 PE \$350,000, FD \$200,000, ROW \$60,000, UTL \$40,000, CON \$2,500,000. Total cost \$3,150,000. This is a retro-reimbursement project.
 -Easton Road over Branch Tacony Creek - CB #268 (MPMS #TBD), Cheltenham Township,
 PE \$350,000, FD \$200,000, ROW \$60,000, UTL, \$40,000, CON \$2,550,000. Total cost \$3,200,000. This is a retro-reimbursement project.
 -Moyer Road over East Branch Perkiomen Creek - CB #262 (MPMS #TBD), Upper Salford Township,
 PE \$350,000, FD \$250,000, ROW \$25,000, UTL, \$20,000, CON \$4,355,000. Total cost \$5,000,000. This is a retro-reimbursement project.

City of Philadelphia

-MLK Drive over Schuylkill River - (MPMS #108129), City of Philadelphia,
 PE \$600,000, FD \$400,000, CON \$5,000,000. Total cost \$6,00,000.
 -Falls Bridge over Schuylkill River - (MPMS #108099), City of Philadelphia,
 PE \$1,200,000, FD \$800,000, CON \$10,000,000. Total cost \$12,000,000.

PennDOT Class: Reserve Line Item

PennDOT Improvement: Reserve Line Item

NHPP:

This line item will provide funds for rehabilitation or replacement of municipal bridges that are identified through a regional review and selection process. Projects may be considered for retroactive reimbursement. A non-traditional, retroactive reimbursement process allows a municipality to perform work to fix or replace a bridge using local funds, and subsequently be reimbursed by PennDOT with state funds. Projects for retroactive reimbursement must be selected and approved by the region before a commitment of retroactive reimbursement would be made.

Twelve (12) projects requesting \$10.6 million for reimbursement at the time of application, selection, and approval by the DVRPC Board are shown below. Funding listed below represents the total project cost estimate at the time of selection and approval, except for Dowling Forge Bridge over Shamona Creek (item #36 below).

Bucks County

- (1) Rockhill Road Bridge over Three Mile Run in East Rockhill Township - \$1,059,094 (\$847,275 State 183/\$211,819 Local) (Bridge Key 7599) - MPMS #86209 - Construction Completed
- (2) Forsythia Crossing over Mill Creek (aka Forsythia Gate Bridge) in Middletown Township - \$394,133 (\$315,306 State/\$78,827 Local) (Bridge Key 48823) - MPMS #103828

Chester County

- (3) Howellville Road Bridge over Norfolk Southern Corp. in Tredyffrin Township- \$2,100,000 (\$1,680,000 State 183/\$420,000 Local) (Bridge Key 10821) - MPMS #14363;
- (4) Kulp Road Bridge over Pigeon Creek in East Coventry Township - \$675,000 (\$540,000 State 183/\$135,000 Local) (Bridge Key 10774) - MPMS #86293;

Five bridges in Bucks and Chester counties that are structurally deficient will be replaced with minimal roadway improvements. An estimated service life extension of 30 years is anticipated. The scope of work will not change the typical section of the roadways or increase their capacities.

The bridges in Bucks County are:

Dublin Pike Road over Deep Run (Bridge Key 6987) in Hilltown Township; and
Butler Avenue over Branch of West Neshaminy Creek (Bridge Key 6913) in New Britain Township.

The bridges in Chester County are:

PA 926/West Street Road over Radley Run (Bridge Key 10284) in Thornbury Township;
Green Valley Road over Branch of West Branch of Brandywine Creek (Bridge Key 10511) in Newlin Township; and
Green Valley Road over Branch of West Branch of Brandywine Creek (Bridge Key 10510) in Newlin Township.

PennDOT Class:

PennDOT Improvement:

NHPP:

This project was selected by District 6-0 Traffic Unit and Bureau of Highway Traffic Safety District and approved for HSIP funding by PennDOT's Central Office Safety Engineering and Risk Management section among a series of low/mid-cost systematic safety improvement projects. High Friction Surface projects were approved based on an analysis of crash locations that have a history of slide-off-the-road crashes. Funds will provide for the installation of high friction surfaces (HFS) (or the highest level of skid resistance) on top of existing roadway to decrease the number of crashes along high crash roadway curves throughout the DVRPC five-county region in Pennsylvania. Applying HFS contributes to vehicular safety by helping motorists maintain better control in dry and wet driving conditions, particularly at locations where they may brake excessively (e.g., when driving around a curve).

The PennDOT Local Bridge Bundling program is a state sponsored program for local bridge projects, in which the purpose is to select and repair bridges that have the same structure type with the same design requirements and are located geographically close to each other in order to induce cost and time savings.

PennDOT has made a total of \$4,700,000 federal sSTP funds for 15 bridges in the DVRPC Pennsylvania region that are expected to be let for construction in October of 2015 and are listed as follows:

Bucks County:

1. Willow Road Bridge (Bridge Key 7629) in Northampton Township
2. Moyer Road Bridge (Bridge Key 7613) in Hilltown Township
3. Fredericks Bridge 14J08 (Bridge Key 7516) in East Rockhill Township
4. Warrington Township 33J02 (Bridge Key 7531) in Warrington Township
5. Alden Avenue 38H05 (Bridge Key 7606) in Falls Township
6. Springfield Street (Bridge Key 7643) in Springfield Township
7. Snowball Gate 42H02 (Bridge Key 7490) in Middletown Township
8. Perkasio Boro 20H02 (Bridge Key 7482) in Perkasio Borough

Delaware County:

9. Paper Mill Road Road (Bridge Key 15434) in Springfield Township

Montgomery County:

10. Easton Road (Bridge Key 27989) in Cheltenham Township
11. Oreland Mill Bridge 31B09 (Bridge Key 28042) in Springfield Township
12. Trewigtown Road 17A06 (Bridge Key 28018) in Hatfield Township
13. Keebler Road Bridge (Bridge Key 28125) in Upper Merion Township
14. Violet Lane Bridge (Bridge Key 47474) in Lower Merion Township
15. Remington Road Bridge (Bridge Key 28022) in Lower Merion Township

Construction for the Montgomery County bridges are funded in MPMS #105127

AQ Code:X1

PLAN CENTER:

IPD:

PROJECT MANAGER: James Mosca

CMP:

PennDOT Class: Planning/Research/Administratio **PennDOT Improvement:** Planning/Research/Administration

NHPP:

This continuing project collects and processes travel data, the primary form being traffic counts, including hourly and 48 hour traffic volumes, for selected locations on the regional highway network. Data collected will provide input to VMT forecasting, the Traffic Monitoring System (TMS), the Congestion Management System (CMS), travel simulation models, individual project level analysis and traffic monitoring and trend analysis. This information is vital to all project studies that address highway deficiencies and proposed solutions. In addition, DVRPC facilitates the periodic review and revision of the highway functional classification system. Traffic count information from the database may be queried at <http://www.dvrpc.org/traffic>. To facilitate uninterrupted data collection, it will be necessary to procure new counting equipment, supplies, and repairs as needed.

Tasks:

- 1) Coordinate with PennDOT and member governments to review traffic count locations.
- 2) Establish weekly schedules, manpower assignments, and control procedures.
- 3) Collect traffic data at approximately 3,000 selected locations.
- 4) Upload data into the DVRPC Traffic Count system, process county, edit for quality control, and develop annual average daily traffic volumes.
- 5) Maintain and further automate traffic data systems and procedures to enhance productivity, including data obtained by third parties via remote sensors, etc.
- 6) Submit counts collected during the year electronically by specific deadlines established by PennDOT and member governments.
- 7) Input traffic count data files into the comprehensive regional GIS-T database for sharing over the internet.
- 8) Maintain an inventory of data collection and safety equipment, including purchasing new equipment with enhanced technology and capability, purchasing needed supplies such as road tube, and procuring necessary repairs if existing equipment gets damaged.
- 9) Collect travel data from non-highway modes, including pedestrian, bicycle and public transportation travel system characteristics and user traits.
- 10) DVRPC will also coordinate with PennDOT, the counties, and cities on the collection and validation of data on the local transportation asset inventory: locally owned public roads and bridges (eight to 20-foot spans), including georeferencing data.

Products:

- 1) Computer database file containing new and updated traffic counts
- 2) Transmittals of traffic data to DOTs, member governments, and interested parties

NHPP:

The proposed scope of work for these bridges includes reconstruction of the arch barrel, spandrel walls, and wing walls as needed; excavation and replacement of the arch backfill with lightweight concrete; and reconstruction of the stone masonry parapets with reinforced concrete cores tied to a full-width moment slab. The approach and bridge roadways will be resurfaced and guiderail attachments will be replaced. The project will also include the installation of scour protection measures where needed. Some of the bridges will require additional work including the resetting of capstones, installation of weep holes, anchoring of bricks with helical rods, rebuilding of collapsed masonry buttresses, replacement of sidewalks, and completion of concrete repairs.

- The bridge in Chester County is: Mansion Road over the South Branch of French Creek
- The bridges in Delaware County are: Bryn Mawr Avenue over a Branch of Meadow Brook Creek; In addition to this structure and the bridge noted below, another structure that is approximately six feet in length will also be rehabilitated with this bridge package. There is no BMS information on this structure because PennDOT does not track structures less than 12 feet in length; Bryn Mawr Avenue over Meadow Brook Creek
- The bridges in Montgomery County are: Byberry Road over Southampton Creek; Greenwood Avenue over a Branch of Rock Creek; Eagleville Road over Eagleville Run
- The bridge in the City of Philadelphia is: Frankford Avenue over Pennypack Creek

MPMS# 105291 *The Circuit Line Item*

LIMITS No Let Date

IMPROVEMENT Bicycle/Pedestrian Improvement

MUNICIPALITIES: Various **FC:** AQ Code:A2

PLAN CENTER: IPD:

PROJECT MANAGER: L. Guarini **CMP:**

PennDOT Class: Bicycle/Pedestrian **PennDOT Improvement:** Bicycle/Pedestrian **NHPP:**

This program provides funds for advancing the Circuit Trail Projects. Regional Trails Program funding from the William Penn Foundation was provided to design Circuit trail projects according to the PennDOT process in order to prepare them for a variety of federal and state construction funding opportunities. \$5 million in CMAQ funding will be used to advance CMAQ eligible Circuit projects to construction. The following projects are included in this line item:

- 1) Bucks - Bridge Street Crossing on D&L Towpath MPMS #105845;
- 2) Bucks - Newtown Branch Rail Trail - Southampton Twp. MPMS #105847;
- 3) Montgomery- Chester Valley Trail Extension Design Supplement for MPMS #16705;
- 4) Montgomery - Pennypack Trail Extension MPMS #105484;
- 5) Philadelphia - Pennypack Trail - State and Rhawn Crossing MPMS #105849;
- 6) Philadelphia - Lindbergh Blvd Sidepath - 84th St to John Heinz NWR MPMS #105853;
- 7) Philadelphia - Spring Garden Street Greenway MPMS #105850

\$4,000,000 TAU (Transportation Alternatives Set-Aside - Urban Allocation) has been allocated by the DVRPC Board for the Winter 2018 round of Transportation Alternatives Set-Aside selected projects to be used for regionally significant trail projects in the future, including projects in the The Circuit Line Item - MPMS #105291.

The Circuit is a 750-mile interconnected network of multi-use trails spanning Greater Philadelphia with Philadelphia and Camden as its hub, and is included in DVRPC's Long-Range Transportation Plan. Circuit trails will generally meet minimum design standards (10-foot wide, paved, and separated from traffic) to reflect their intended use as the arteries of a dedicated regional non-motorized transportation system. Circuit trails located near and connecting to downtown Philadelphia are already used heavily for transportation purposes, and the implementation of the network will further encourage the surging growth of bicycle commuting in the region. At 2.3%, Philadelphia has the highest bike-to-work percentage of the 10 largest cities in the country according to the 2013 American Community Survey.

This is the Reserve Line Item for sink hole repairs. A sinkhole is generally a circular hole or a depression in the ground that is caused by erosion and water drainage. The size of a hole can range from a few feet to a size large enough to engulf an entire building. It can suddenly appear without warning and may continue to grow after the initial collapse. Sinkholes are naturally part of Pennsylvania's landscape called karst and are considered a serious geologic hazard in central and eastern Pennsylvania.

PROJECT MANAGER: L. Guarini

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

This project will provide for coordination activities among multiple Transportation Management Associations (TMAs) in Bucks, Delaware, and Philadelphia counties to assist PennDOT with mitigating congestion on the I-95 corridor by reducing the number of drivers on the road during construction, particularly during AM and PM peak commute hours. Outreach efforts will focus on select employers with employees using the corridor; some efforts will reach those same employees directly. Outreach activities will include sharing and supplementing efforts to inform regular users of upcoming construction schedules, in addition to educating and assisting employers to help employees who are regular users with finding viable alternatives to driving alone along this corridor, utilizing Travel Demand Management (TDM) techniques.

Interstate 95 is a critical corridor for the movement of commuters and goods between the City of Philadelphia and neighboring Bucks and Delaware counties in Pennsylvania. Delays from traffic congestion, already commonplace on I-95 during peak commute times, are further exacerbated by ongoing construction work. Proactive steps are needed to ensure that the public is educated on both the nature and timing of these upcoming construction projects and made aware of alternative means of commuting that will help to lessen the impact of these projects on traffic flow, with a specific focus on employer concerns (on-time arrivals, reliable commute times, reducing use of vacation/sick time, improving employee morale, etc.).

MUNICIPALITIES: Various

FC:

AQ Code:S19

PLAN CENTER:

IPD:

PROJECT MANAGER: Gannett/V. Genua

CMP:

PennDOT Class:

PennDOT Improvement:

NHPP:

Seven bridges in Bucks, Chester, and Montgomery counties that are structurally deficient will be replaced, and one bridge in Bucks County that is not structurally deficient will be rehabilitated, all with minimal roadway improvements. An estimated service life extension of 30 years for replacements and 15 years for rehabilitation is anticipated. Work will also include District-wide "On-Demand" bridge repairs. The scope of work will not change the typical section of the roadways or increase their capacities.

The bridges in Bucks County are:

Aquetong Road over Branch of Aquetong Creek (Bridge Key 7100) in Solebury Township;
 Rehabilitation of Hulmeville Road over Chubb Run (Bridge Key 7222) in Middletown Township; and
 Richlandtown Road over Cooks Creek (Bridge Key 7419) in Springfield Township.

The bridges in Chester County are:

Clay Creek Road over Tributary of East Branch of White Clay Creek (Bridge Key 39994) in Franklin Township;
 Creek Road over Branch of Brandywine Creek (Bridge Key 10173) in East Brandywine Township; and
 Baltimore Pike over Branch of Red Clay Creek (Bridge Key 10501) in New Garden Township.

The bridge in Montgomery County is:

Second Avenue over Branch of Mingo Creek (Bridge Key 27805) in Upper Providence Township.

PennDOT Class:

PennDOT Improvement:

NHPP:

To assist with planning efforts to help communities in the region become more pedestrian-friendly and accessible, this project will develop a new regional sidewalk inventory and create an online platform for a shared regional conversation on local and regional walkability.

A regional sidewalk inventory will allow DVRPC and partners to do things like map and measure the mileage, connectivity, and quality of sidewalks in the region or a local area, identify gaps where sidewalk infrastructure is not present or in poor condition, set grounded targets for sidewalk network buildout, and can serve as a starting point for the development of priorities to address sidewalk gaps in the most appropriate places. The creation of a sidewalk inventory will also allow DVRPC to better address walkability in regional performance measures, support regional asset management efforts, and will be beneficial for other planning activities like Safe Routes to School, PennDOT Connects, pedestrian safety audits, healthy communities planning, and improving safe and equitable access to transit and other essential services. A sidewalk inventory can also be used to support the creation of pilot funding programs related to improving walkability and accessibility.

The online walkability engagement tool, which will complement the sidewalk inventory, will allow regional residents to share information about sidewalk and walking conditions in their communities. Users will be able to plot their location, rate how safe they feel, and note desired improvements. The online platform will also provide an opportunity for local and regional community and advocacy groups, such as senior and disabled advocates, to gather and share the voices and needs of their constituencies. To the extent possible, the online platform will be connected with existing communication tools like the Philadelphia 311 system so that sidewalk maintenance issues reported by users will reach agencies who can address them directly.

PennDOT initiated a Local Road and Bridge data collection project to collect important data on municipal and county roadways. Working with the state's MPOs and RPOs, PennDOT's goal is to gather comprehensive information on the Commonwealth's extensive network of local roads and bridges missing from the current inventory. The supporting data that is collected will be stored in a database available to PennDOT's planning partners and counties for use in planning, programming, and other business needs.

PennDOT currently does not have complete data on "non-liquid fuel" local roadways and bridges. Non-Liquid Fuel local roads are owned and maintained by municipalities and are not funded by the liquid fuels tax. In past years, data has been collected for Chester and Delaware counties, and portions of Bucks and Montgomery counties. This year, staff will continue the data collection in Bucks and Montgomery, and may begin collecting data in the City of Philadelphia. Using existing data from PennDOT and the counties/City, DVRPC will need to field verify locations of potential public local roads and bridges. The project does not include private roads, or bridges on private roads, such as cemetery drives, private driveways, or roads used on private property such as mobile home, apartment or commercial complexes.

DVRPC staff will perform the data collection according to established methodology developed by PennDOT utilizing tablets and software provided by PennDOT. Prior to any data collection in Philadelphia, DVRPC will send a letter to the City of Philadelphia that explains the purpose of the project. DVRPC will continuously monitor progress and perform quality checks on all collected data utilizing PennDOT's web-based mapping application.

The consultant will provide for the necessary operational support to Transportation Systems Management and Operations (TSMO) projects such as the I-76 Integrated Corridor Management Project. The consultant will assist Department staff with providing key oversight and assist the Department to focus on Active Arterial Traffic Management and activities in the region to improve safety and mobility. Some of the activities may include the following:

- Developing Corridor specific Traffic Signal Management Plans, Concept of Operations, and Systems Engineering Documentation.
- Assist the Department with developing and executing Memorandums of Understanding (MOU) agreements.
- Provide performance based business and functional requirements gathering,
- Provide project coordination and management of TSMO related projects and activities.
- Provide project management and construction management assistance.
- Evaluate and develop routine executive reporting utilizing data and analytical tools.
- Provide and review final design, and assist with consultation during construction.
- Provide traffic operations management and arterial timing adjustments as needed
- Prepare system engineering report in close coordination with regional ITS architecture.
- Identify performance based key objectives including but not limited to such as improving arterial travel time reliability and performance, employing travel demand management technique, communicate real time traveler information via connected vehicle technology.
- Provide technical support with the deployment of Connected Automated Vehicle (CAV) applications.
- Identify appropriate system and functional requirements including but not limited to reliable communication infrastructure, data and storage needs, hardware and software for unified command and control, adaptive and dynamic signal control, transit signal priority, emergency signal preemption, automated timing plan generators, lane reservation on arterials, automated signal performance matrices, travel time.
- Address the need for ITS devices such as CCTV, DMS and travel time system for integrated corridor management. Identify maintenance response plan along with resource needs to operate and maintain complex arterial transportation system.
- Provide TMC technical staff assistance and training as needed.
- Provide technical assistance when conducting After Action Reviews or Program assessments
- Development of outreach materials (i.e. presentations, briefings, brochures, program information, and website information) as requested.
- Development of project special provisions or other necessary tasks to ensure regional operability.
- Development of communication and network design template for arterial roadway system.
- Assist with Communications and network troubleshooting, documentation working with Central Office and District staff. Coordination with the Central Office IT RTMC Liaison.
- Assist with Central Office Coordination
- Other activities related to Traffic Operations that will support the Department's program efforts to improve safety and mobility

NHPP:

This project provides for technical and planning assistance to PennDOT District 6 for support in implementation of the I-95 Reconstruction Projects, and other traffic studies as identified by PennDOT. DVRPC will be "on call" for quick-turnaround analysis or data collection tasks in support of specific and timely I-95 project planning needs. Tasks will include data collection, meeting and stakeholder coordination, traffic modeling and forecasting, and general research as needed.

This project will require an expansion of DVRPC staff to include a dedicated travel modeler to prepare traffic forecasts throughout the I-95 corridor in Pennsylvania. The additional staff member will report to the Manager, Office of Modeling and Analysis, and work with other OMA staff as needed to prepare traffic forecasts and other modeling services.

New traffic data and forecasts are needed for several tasks. These include analyzing additional interchange configurations to improve safety, reduce congestion, and address community concerns; support new or updated Point-of-Access (POA) studies; extend the horizon year of previous traffic forecasts in the corridor; analyze and plan for future freight activity; and prepare detour route forecasts for later construction phases.

NHPP:

These congestion mitigation efforts cover business outreach efforts by contracted agencies for the Mobility Alternatives Program (MAP), the Share a Ride Program (SAR), and the Emergency Ride Home Program (ERH). Geared to employers, MAP is an outreach and education program overseen by DVRPC to provide information to employers and commuters about options to the single occupant auto for commuting to work. Most of the MAP contractors have the same work program, and the uniform marketing materials are created and produced by DVRPC. SAR is a computerized ride matching program available to all commuters with jobs in the DVRPC region. The system provides all available transit options to the applicant before any potential car or vanpool matches. SAR is a matching system only; once match information is provided to applicants, the individuals are responsible for making mutually-agreeable arrangements on their own. To complement SAR, the Emergency Ride Home Program makes rental-car or taxi transportation available in emergency situations. Note that funding for this task was formerly shared with the Transportation Management Associations (TMA) work programs under MPMS #17900. The DVRPC Work Program Task funding has now been broken out under this MPMS #110460 for distinction from the TMA work programs task and for more efficient administration purposes. The TMA portion is now covered under MPMS #110429.

The efficient operation of the US 422 corridor is fundamental to the vitality of the greater Philadelphia region. Due to limited capital funding for capacity improvements, alternative strategies to maximize the current and future operating performance of this corridor continue to be identified. The primary focus of this study will be to develop a microsimulation tool and use it to analyze those strategies identified via participation of the project's stakeholders.

PennDOT Class: **PennDOT Improvement:** **NHPP:**

The project will address reducing crashes at wet road cluster locations. The improvements that will be implemented include High Friction Surface Treatment (HFST), refreshed/new pavement markings, and centerline/edgeline rumble strips. The proposed scope of work includes installing HFST, dotted extension pavement markings at intersections, advance curve warning markings, and centerline/edge line rumble strips where applicable. This project is scalable, so it will have the flexibility to add/delete locations depending on funding availability. Prioritized locations from District 6-0's wet road cluster lists will be closely coordinated with the District resurfacing program as it is developed each year to maximize HFST life cycle wherever possible.

Transportation Management Associations (TMA's) help the region address demand for the region's transportation system. They are public-private partnerships that provide a forum to resolve transportation issues in their service areas. Services include a range of transportation improvement options, including task forces, employer and construction project shuttles, advocacy, and congestion reduction assistance to employers along corridors and in municipalities. TMA's work closely with PennDOT to keep businesses connected and informed about construction projects. Because they actively promote congestion reduction measures and transit use, the TMAs help to lower the need for new highway capacity. Each TMA contractor has a work program tailored to the transportation issues and needs of their constituencies and territories. Work programs are developed collaboratively with PennDOT, DVRPC, and their respective County/City Planning departments.

MPMS# 93586 *Downingtown Train Station Rehabilitation*

LIMITS No Let Date

IMPROVEMENT Transit Improvements

MUNICIPALITIES: Downingtown Borough FC: AQ Code:2025M

PLAN CENTER: Town Center IPD: 3

PROJECT MANAGER: CMP:

PennDOT Class: PennDOT Improvement: NHPP:

A new Downingtown Station will be constructed at a location that is less than half a mile east of the existing station on State Route 322/ Brandywine Avenue on a section of tangent track in Downingtown Borough, as a result of the Alternative Analysis conducted by PennDOT with Amtrak, SEPTA, and local communities in 2013. The proposed new station will continue to serve Amtrak and SEPTA train service, will be ADA accessible, and will provide 500 foot long high level boarding platforms, approximately 850–950 parking spaces, bicycle and pedestrian access, site lighting and security. The existing station is an enclosed shelter with a low level platform, has 360 parking spaces, and is not ADA accessible. The details of the site configuration will continue to develop as PennDOT works towards the goal of creating a Transit Oriented Development (TOD) with a developer to be determined.

The Downingtown Station is a component of the Keystone Corridor rail service between Philadelphia and Harrisburg. Sharing some of the operating characteristics of the Northeast Corridor (NEC) main line, the Amtrak-owned and operated Philadelphia-Harrisburg segment (104 miles) is a mature passenger corridor, with frequent intercity trains (14 Amtrak round trips per average workday, which operate on the NEC beyond Philadelphia to New York from Harrisburg) and SEPTA commuter trains for part of the route between Downingtown and Philadelphia. There are 22 Amtrak stops and 42 SEPTA stops per weekday at the Downingtown Station. Amtrak ridership numbers for the station are 61,435 riders (FY14-15). This line has multiple tracks, full electrification, and grade separation from the highway grid.

This project will complete site evaluation and concept development for the station. The project will also focus on ADA compliance and creating a walkway between the north and south side of Parkesburg Station. Improvements at the station will move the Keystone corridor towards full ADA accessibility and provide an improved environment to foster increased ridership.

The Parkesburg Station located in Chester County is a component of the Keystone Corridor high speed rail service between Philadelphia and Harrisburg. Sharing some of the operating characteristics of the Northeast Corridor (NEC) main line, the Amtrak-owned and operated Philadelphia-Harrisburg segment (104 miles) is a mature passenger corridor, with frequent intercity trains (14 round trips per average workday, most of which operate on the NEC beyond Philadelphia to New York from Harrisburg) and SEPTA commuter trains for part of the route between Downingtown and Philadelphia. There are approximately eight Amtrak stops per day at the Parkesburg Station. This line has multiple tracks, full electrification, and almost complete grade separation from the highway grid.

The Villanova Station project will modernize the station located on the Paoli/Thorndale Regional Rail Line and make it fully ADA accessible. This project will be advanced in phases.

Phase 1 will improve station accessibility and includes the construction of a new, wider pedestrian tunnel with access ramps and stairs, additional parking spaces, stormwater management improvements, new signage, lighting, and passenger amenities. The total budget for Phase 1 is \$20.15 million. SEPTA will use prior year funds and funds programmed FY 2017-2019 to advance Phase 1.

Phase 2 will make the station fully ADA accessible and includes full length high-level platforms, new canopies, station building improvements, passenger shelters and passenger amenities. The total budget for Phase 2 is \$10.45 million, which is programmed in FY 2019-2021.

The total project cost is \$30.6 million. Funding is programmed as follows: Prior year funds in the amount of \$7.81 million and \$22.79 million in FY 2017-2021.

The Utility Fleet Renewal Program is a comprehensive effort to upgrade and replace the Authority's utility fleet and automotive service fleet. SEPTA utility vehicles support transit and railroad operations. These vehicles include automobiles for transit supervisors and operations support personnel; utility vehicles for the maintenance of operating facilities; and service vehicles and equipment for use in garages, shops, and operations support functions. In order to have adequate and reliable utility vehicles, SEPTA has developed a program to periodically renew this fleet on a vehicle-by-vehicle basis, contingent on the vehicle's age, condition and usage within the Authority.

Capital funds will provide for debt service and costs related to the issuance of bonds, notes, and other indebtedness incurred by SEPTA for the following debt service payments:

- Payments on converted Indexed Rate Revenue Refunding Bonds, Series 2007. These bonds were used to refund the Special Revenue Bonds, Series 1997, which provided funds for the buyout of leases on Bombardier Rail Cars, General Motors Locomotives and Frazer Rail Car Maintenance Shop and for other capital improvement projects, including the Market-Frankford Subway Elevated car acquisition, Broad Street Subway Line cable replacement, Frazer Yard interlocking construction and Market-Frankford Subway Elevated Line infrastructure improvements.
- Payments on Fixed Rate Revenue Bonds, Series 2010. These bonds were used to refund the Special Revenue Bonds, Series 1999, which provided funds for the Market-Frankford Line cars, various capital improvement projects, and partial refunding of Series 1995A Bonds.
- Payments on Capital Grant Receipts Bonds, Series FY 2011. These bonds are being used for the procurement of 120 new railcars (Silverliner V's) and the rehabilitation of the Wayne Junction Intermodal Facility.
- Payments on future bonds. SEPTA anticipates issuing municipal bonds in the second four years of the TIP (FY 2021-FY 2024). Repayment of these bonds is expected to begin in FY 2023.

This project will rehabilitate City Hall Station on the Broad Street Line and 15th Street Station on the Market-Frankford Line. The improvements to be completed include the installation of new elevators and ramps to all levels of both stations, wider ramped corridors connecting the stations, and accessible fare line gates. The station interiors will be updated with new architectural finishes, signs, Art-in-Transit, seating and other amenities, lighting, public address systems, and closed-circuit TV. Structural repairs and upgrades will be completed to improve mechanical and natural ventilation, and prevent / intercept water infiltration and inflow. The 15th Street / City Hall Stations project has been divided into the following phases: Dilworth Park Phase (complete), 15th Street Station Phase, Inter-Station Connections and City Hall Station Structural Work Phase, and the City Hall Station Phase.

The total project cost is \$146.47 million. Funding is programmed as follows: Prior year funds in the amount of \$29.63 million and \$116.84 million in FY 2017-2021.

This project provides for the engineering and construction of a new multi-modal transportation center in Paoli, Chester County. The new facility will be located on the Paoli/Thorndale Regional Rail Line at the approximate location of the existing station. The project will be advanced in two phases.

Phase 1 will make the existing station ADA accessible. This phase includes construction of a pedestrian overpass with a total of three elevators linking inbound and outbound station parking lots as well as a new full length high-level center platform. The outbound parking areas will be reconfigured and pedestrian linkages, such as sidewalks and crosswalks, will be provided throughout the station area. The total budget for Phase 1 is \$36 million. SEPTA, Amtrak and PennDOT are all contributing to the cost of Phase 1 construction. SEPTA's portion of Phase 1 construction is \$12 million, which is being supported by prior year funds and funds programmed in FY 2017 and FY 2018.

Phase 2 includes an intermodal station complex complete with an additional high-level platform on the outbound side, passenger amenities, enhanced bus facilities and a 600-plus space commuter parking garage. The total budget for Phase 2 is \$51.2 million, which is programmed in FY 2023-2025. Advancement of the Darby Road Bridge improvements is a necessary requirement for Phase 2 construction.

Complementing this project is MPMS #47979 Paoli Transportation Center Road Improvements / Darby Road Bridge, which will replace the North Valley Road (SR 1005) over Amtrak / SEPTA (BMS# 15-1005-0080-1331 adjacent to the Paoli Train Station) with a new bridge across from the intersection of Lancaster Avenue and Darby Road.

SEPTA's Vehicle Overhaul Program (VOH) provides for the systematic replacement or upgrade of systems on SEPTA's rolling stock. Vehicles are scheduled for overhauls during their service lives based on vehicle type. A vehicle must receive periodic overhauls if it is to optimize performance throughout its useful service life. Prudent fleet management requires a program of preventive maintenance for optimal fleet reliability, service quality, efficient performance, and passenger comfort. Advanced scheduling of vehicle preventive maintenance allows SEPTA to purchase material and produce rebuilt components in an efficient and effective manner. In addition to vehicle overhauls, this program also provides for vehicle campaigns. Campaigns address both critical items and vehicle equipment upgrades and modifications, which are accomplished on a fleet-wide basis. The Vehicle Overhaul Program will allow SEPTA to continue its overhaul of rolling stock, thus ensuring continued safe and reliable service.

LIMITS System-wide No Let Date

IMPROVEMENT Transit Improvements

MUNICIPALITIES: Various **FC:** AQ Code:M5

PLAN CENTER: IPD:

PROJECT MANAGER: **CMP:** Not SOV Capacity Adding

PennDOT Class: **PennDOT Improvement:** **NHPP:**

The SEPTA Key (New Payment Technologies) Project is modernizing SEPTA's antiquated fare payment and collection system by replacing it with a system that utilizes contactless payment devices and readers. New Fare Kiosks located in stations and other terminal locations will improve customer convenience for fare instrument purchases. Key Cards will also be widely available in retail establishments throughout the SEPTA service area and will be reloadable: 1) at Fare Kiosks or ticket offices; 2) automatically through an account with SEPTA; or 3) through an on-line transaction.

SEPTA Key is unique because it will include all of SEPTA's service modes. In addition to bus, rail transit, and regional rail fare collection improvements, this project will include improvements to the payment and collection procedures for SEPTA's Customized Community Transportation (CCT) operation and SEPTA's parking operations. Computer equipment and software systems will support the enhanced system-wide fare collection system.

Phase 1 of the project included the complete design, partial deployment and testing of the data network and the SEPTA Key system. Phase 2 includes the installation of the system on Rail Transit, Trolley and Bus fleets. In the last phase of the project, Regional Rail, Parking Operations, and Customized Community Transportation (CCT) will transition to the SEPTA Key.

Companion projects supporting the SEPTA Key project and incorporated in the total project budget include: bus and trolley farebox upgrade; Market-Frankford Line and Broad Street Line fiber optics improvements; electrical support for new fare lines at five downtown Railroad stations (Temple University, Jefferson, Suburban Station, 30th Street Station and University City); Broad Street Line, Market-Frankford Line and Trolley station fare line improvements; zone offices to monitor fare lines and assist passengers; control modifications for elevators; Railroad station waiting room security; provision of power to Railroad Parking Payment Stations; and 30th Street Railroad Station ticket office/vendor relocations. These SEPTA Key companion projects are necessary to provide enhanced customer service and achieve cost efficiencies and revenue enhancements.

The SEPTA Board approved a loan agreement with the Philadelphia Industrial Development Corporation (PIDC), Limited Partnership (LP) XXVIII, to finance this project. The total project cost includes the loan repayment, interest on the loan and companion project costs.

Project status updates are available online at <http://www.septa.org/key/>.

The total project cost is \$267.90 million. Funding is programmed as follows: Prior year funds in the amount of \$69.99 million and \$197.91 million in FY 2017-2019.

This project will provide for a three mile restoration of rail service from the existing Media/Elwyn Regional Rail Line terminus at Elwyn, Delaware County, to a new terminus in Wawa, Delaware County along the existing railroad line, referred to as the West Chester Branch. The scope of work for this project consists of track bed reconstruction including crossties, continuous welded rail and track interlockings; catenary system rehabilitation; a bi-directional signal system with automated train controls and positive train control; communications system improvements; the replacement of three bridges; and the rehabilitation of one bridge and three culverts.

The new terminus at Wawa will include a station building with a passenger waiting area and restroom facilities; a high-level island platform with canopy and windscreens; a pedestrian underpass with accessible ramps and stairways; and a 600+ car parking deck. The new facility will be fully ADA compliant. A new traffic intersection and access road connecting U.S Route 1, a major highway artery in the area, to the station will be constructed. Additional project elements include the construction of a railcar storage/maintenance yard and crew facility on SEPTA property in Lenni, Delaware County.

The total project cost is \$150.6 million. Funding is programmed as follows: Prior year funds in the amount of \$12.64 million and \$137.96 million in FY 2017-2021.

SEPTA

MPMS# 60638 *Regional Rail Car, Locomotive, and Trolley Acquisition*

LIMITS System-wide No Let Date

IMPROVEMENT Transit Improvements

MUNICIPALITIES: Various **FC:** AQ Code:M10

PLAN CENTER: IPD:

PROJECT MANAGER: **CMP:** Not SOV Capacity Adding

PennDOT Class: **PennDOT Improvement:** **NHPP:**

This program provides for the replacement and addition of rail cars, locomotives, and trolleys. It will replace vehicles and equipment that have exceeded their useful life, and provide for fleet expansion to meet present and projected increases in ridership. Planned procurements include:

Electric Locomotives - \$162 million (Prior Years-FY 2019)

This project provides for the acquisition of new electric locomotives. The acquisition of new locomotives will allow SEPTA to retire its current, life-expired locomotives and accommodate the planned acquisition of new multi-level push-pull railcars to address growing ridership. A contract was awarded in July 2015 for thirteen ACS-64 locomotives with an option for up to an additional five. The locomotives are expected to be delivered in calendar year 2018.

Multi-Level Regional Rail Cars and Coaches - \$194.63 million (Prior Years-FY 2023)

This project provides for the acquisition of 45 new multi-level push-pull passenger railcars. These cars are required to accommodate growing ridership and increased service capacity needs on SEPTA's Regional Rail system. These cars are additions to SEPTA's current fleet of 45 push-pull railcars. The new cars will fully comply with Americans with Disabilities Act (ADA) requirements and federal and state regulations regarding safety features and systems. The cars will include passenger amenities, such as wider aisles, a state-of-the-art climate control system, bicycle storage area and WiFi. The new cars will have electronic exterior and interior destination signs, voice announcement and corresponding video screen display of train destination and upcoming station stops. In addition, the new railcars will be equipped with on-board video surveillance and automatic passenger counting systems. The railcars are expected to be delivered in calendar years 2019 and 2020.

Trolley Acquisition and Infrastructure - \$713.25 million (Prior Years-FY 2028)

This project provides for the modernization of SEPTA's Trolley service through the acquisition of new articulated trolleys, and associated planning and infrastructure improvements to accommodate these new vehicles. The goals of the project are to provide a system in full compliance with the ADA; ensure a safer and more reliable transit service; control vehicle acquisition costs by providing faster, higher capacity service; and reduce operating costs through fleet right-sizing. The new trolleys will operate on City Transit Routes 10, 11, 13, 15, 34, 36 and Suburban Transit Routes 101 & 102. In addition to the acquisition and infrastructure improvements, the planning process will also evaluate the feasibility of trolley service restoration on Routes 23 and 56. The trolleys will require a complex and closely interrelated series of infrastructure upgrades in areas such as communications, signals, power supplies, subway station and in-street stop upgrades, track and bridge improvements, fare payment and trolley maintenance.

Regional Rail Cars, Silverliner VI - \$1.1 billion (FY 2024-Future Years)

This project provides for the purchase of new railcars to replace SEPTA's Silverliner IV railcar fleet. The Silverliner IV railcars were built between 1974 and 1976, and by the time of replacement, the cars will be well past their expected useful life. Vehicles acquired will fully comply with ADA requirements and federal and state regulations regarding safety features and systems.

This program provides for improvements to SEPTA's rail service traction power supply system. Critical components of the power system have far exceeded their useful life and are in need of repair. Program work includes replacing transformers, trolley breakers, feeder switches, substation switchgears, protective relaying, and catenary. Currently programmed substation and power projects include:

Railroad Substations:

- Allen Lane Substation - \$15 million (FY 2025-Future Years)
- Ambler Substation - \$10.88 million (Prior Years-FY 2017)
- Brill Substation Overhaul - \$12.8 million (FY 2025-Future Years)
- Jenkintown Substation - \$34.05 million (Prior Years-FY 2017)
- Morton and Lenni Substations - \$18.14 million (Prior Years-FY 2017)
- Wayne Junction Static Frequency Converters #1-4 - \$55.75 million (Prior Years-FY 2022)

Multi-modal Substation Overhaul Program:

- Substation Design and Equipment Purchase - \$25.77 million (Prior Years-FY 2021)
- Lansdale, Chestnut Hill East, 18th/12th/Portal, Hatboro Construction - \$25.24 million (FY 2018-2022)
- Neshaminy, Bethayres, Yardley Construction - \$24.58 million (FY 2018-2022)
- Market, Ellen, Ranstead Construction - \$18.68 million (FY 2019-2022)
- Broad, Loudon, Castor Construction- \$19.95 million (FY 2018-2022)
- Woodbourne Construction - \$23.49 million (FY 2020-2024)
- Transit Substation Overhaul Program - \$45 million (FY 2027-Future Years)

Power Program:

- 30th Street West Catenary Replacement - \$77 million (Prior Years-FY 2022)
- Airport Line Catenary Replacement - \$1 million (FY 2018-2021)
- Chestnut Hill East Line Catenary Replacement - \$5.5 million (FY 2020-2024)
- Fox Chase Line Catenary Replacement - \$2.75 million (FY 2021-2024)
- Regional Rail Power Feeder Cable Improvements - \$3 million (FY 2025-2028)
- Wayne Junction Yard Catenary Replacement - \$1.25 million (FY 2023-2026)

The Ardmore Transportation Center project on the Paoli/Thorndale Regional Rail Line will modernize the station and make it fully ADA accessible. This project will be completed in phases.

Phase 1 will make this station fully ADA accessible with enhancements that include a new inbound station building; outbound shelters; high and low-level platforms; canopies; passenger amenities; tunnel accessibility improvements; elevators and accessible stairs and ramps; improved lighting; new signage; landscaping and site improvements including storm water management; and preparing the foundation for a future parking garage. Phase 1 costs include design for Phase 1. The total budget for Phase I is \$36.29 million. SEPTA will use prior year funds and funds programmed in FY 2018 to advance Phase 1.

Phase 2 includes the construction of an accessible multi-level parking garage with approximately 500 spaces; landscaping; site improvements; bus berthing area inside the garage; and improved vehicle and pedestrian access to Lancaster Avenue. The total budget for Phase II is \$26.05 million. SEPTA is programming \$10 million towards Phase 2 construction in FY 2026 and FY 2027. Phase 2 will be advanced upon identification of funding partners and alternate funding sources.

The total project cost is \$62.34 million. Funding is programmed as follows: Prior year funds in the amount of \$28.99 million (\$18.9 million Federal / \$5.4 million State Department of Transportation / \$3.5 million State Redevelopment Assistance Capital Program (RCAP) / \$1.2 million local), \$7.3 million in FY 2018, and \$10 million in FY 2026 and FY 2027. An additional \$16.05 million will be programmed when funding sources are identified.

The annual Infrastructure Safety Renewal Program (ISRP) provides for the restoration of SEPTA's transit and railroad infrastructure to a state of good repair. Projects to be advanced include:

- Track and Right-of-Way: Renewal or replacement of track, switches, and special work including yard and shop areas; track surfacing; fencing; and grade crossing improvements.
- Station Facilities: Rehabilitation of station buildings and associated facilities including roofs and canopies; ticket offices and waiting rooms; platforms; lighting; sanitary facilities; escalators; elevators; parking; and accessibility improvements.
- Signals and Communications Systems: Rehabilitation of signal systems and select communications equipment.
- Power Systems: Rehabilitation of electric traction and power systems and associated components including catenary and support structures; feeders and transmission lines; and localized and centralized control facilities.
- Maintenance/Support Facilities - Rehabilitation of shops, maintenance/storage yards, and associated maintenance and support facilities, including improvements or replacement of air compressors, sump pumps, sprinkler systems, tunnel lighting, duct banks, vehicle servicing equipment, bridges and other support functions.

NHPP:

SEPTA's Bus Fleet Management Plan provides for the annual acquisition of different size buses based upon needs and route characteristics including vehicles that have exceeded their useful life and are in need of replacement. The current bus fleet consists of a variety of buses ranging from 60-Foot articulated and 40-Foot buses for City Transit and Suburban service routes to 27-Foot and 30-Foot buses for contracted service routes.

The Bus Purchase Program provides the following benefits: 1) Dependable and improved service for our customers, 2) Systematic replacement of aging components of the fleet, 3) Maintaining an average bus fleet age of approximately six years and 4) Introduction of new technology to the fleet.

Each new bus will have a public address system that will enable the operator to clearly communicate with passengers inside and outside the vehicle. For the hearing and visually impaired, an audio/visual annunciating system will be installed, which will automatically announce upcoming bus stops and informational messages. All buses will be low-floor and equipped for wheelchairs to address accessibility needs. Additional features include an on-board video surveillance system and a bicycle rack.

In FY 2017 through 2020, SEPTA will purchase five hundred twenty-five (525) 40-Foot buses to replace SEPTA's existing 2000-2004 NABI 40-Foot buses, which will have exceeded their useful service life of 12 years by the time of replacement.

Funding for this program is also provided from MPMS #65109, FHWA Transit Flex to SEPTA.

State Bond funds programmed in MPMS #90512 each year will be applied as a state match for the flex funds programmed in MPMS# 65109.

The Exton Station Improvement project will modernize the station located on the Paoli/Thorndale Regional Rail Line. This project will be advanced in phases.

Phase 1 encompasses the construction of high-level platforms with canopies and wind screens, stormwater management improvements, and a new station building. The station facilities will be fully ADA compliant. New lighting, signage, security features, and passenger amenities will also be provided. The total budget for Phase 1 is \$23.44 million. SEPTA will use prior year funds and funds programmed in FY 2018 to advance Phase 1.

Phase 2 comprises the construction of bus circulation loops with bus shelters. The planned bus circulator loops will promote intermodal access to the station. Phase 3 includes the development and construction of a fully accessible, multi-level parking garage with pathways to the station platforms. The Phase 2 and 3 budget is \$39.5 million. SEPTA will use funds programmed in FY 2020 to FY 2024 to advance Phase 2 and 3.

The total project cost is \$62.94 million. Funding is programmed as follows: Prior year funds in the amount of \$14.94 million, \$8.5 million in FY 2018 and FY \$39.5 million FY 2020-2024.

This project provides for improvements at SEPTA's bus and rail maintenance shops, facilities maintenance shops, and office buildings. Program elements include replacement of vehicle washer, lift, and boiler systems; wheel truing program; bus and steel wheel lift programs; underground storage tank replacement program; construction of a new district employee facilities; and paving improvements. Currently programmed projects include:

- Allegheny Washer - \$3.55 million (Prior Years-FY 2018)
- Boiler Replacement Program - \$12 million (Prior Years-FY 2028)
- Bus Lift Program - \$10.5 million (FY 2022-2028)
- Environmental Cleanup - \$5.89 million (FY 2017-2028)
- Frankford District Employee Facilities - \$9.7 million (Prior Years-FY 2018)
- Frontier Garage Roof, Washer, and Paving - \$9.95 million (Prior Years-FY 2019)
- Overhead and Fire Doors - \$8.75 million (FY 2022-2028)
- On-Site Power for Major Facilities - \$15 million (FY 2017-2028)
- Overbrook Washer - \$3.2 million (FY 2022-2025)
- Powelton Yard Facility Improvements - \$3.92 million (Prior Years-FY 2018)
- SEPTA Headquarters Improvements - \$5.32 million (Prior Years-FY 2017)
- Southern Garage Stormwater Management and Pavement - \$4.92 million (Prior Years-FY 2018)
- Steel Wheel Lift Program - \$12 million (FY 2017-2028)
- Underground Storage Tank Replacement Program - \$21 million (FY 2017-2028)
- Vehicle Washer Program - \$14 million (FY 2022-2028)
- 103 Victory Avenue Facility Improvements - \$10.47 million (Prior Years-FY 2018)
- Wheel Truing Program - \$15 million (FY 2017-2028)

Also included in this program is the Frazer Rail Shop and Yard Upgrade project. This project will upgrade the Frazer Maintenance Facility to accommodate the expansion of SEPTA's railcar and locomotive fleets including new multi-level cars. Work includes extending three existing storage tracks and adding three new storage tracks; major upgrades to the repair shop and equipment, including the wheel truing machine and drop table; construction of a shop extension, new cleaning track, train washer building, storage building and yardmaster building; utility upgrades and stormwater improvements. In addition, the roof will be upgraded and mechanical equipment and electrical connections will be replaced. The budget for this project is \$139 million. Funding is programmed as follows: prior fiscal years and FY 2017-2020.

SEPTA

MPMS# 103626 *Resiliency Program*

LIMITS No Let Date

IMPROVEMENT Transit Improvements

MUNICIPALITIES: FC: AQ Code:M6

PLAN CENTER: IPD:

PROJECT MANAGER: CMP:

PennDOT Class: PennDOT Improvement: NHPP:

The Resiliency Program provides funding for seven projects that proactively address infrastructure vulnerabilities. On September 22, 2014, approximately \$3.6 billion was made available by the Federal Transit Administration under the Public Transportation Emergency Relief Program (Section 5324) for competitively selected projects in response to Hurricane Sandy. SEPTA was selected to receive \$86.76 million in federal funds (\$115.68 million total) to advance projects which intend to protect public transportation infrastructure that have been repaired or rebuilt after Hurricane Sandy or that is at risk of being damaged or destroyed by a future natural disaster.

SEPTA was selected to receive funding for the following projects:

- Ancillary Control Center - \$12 million total
- Flood Mitigation at Jenkintown - \$19.9 million total
- Manayunk/Norristown Line Shoreline Stabilization - \$6 million total
- Railroad Embankment/Slope Stabilization - \$25 million total
- Railroad Signal Power Reinforcement - \$42.7 million total
- Sharon Hill Line Flood Mitigation - \$5 million total
- Subway Pump Room Emergency Power - \$5 million total

SEPTA previously initiated work on these projects and obligated \$89.41 million. The balance of funding for the Resiliency Program or \$26,269,955 is programmed in FY 2017 and will support the following projects: Flood Mitigation at Jenkintown; Manayunk/Norristown Line Shoreline Stabilization; Railroad Embankment/Slope Stabilization; Sharon Hill Line Flood Mitigation.

This project provides for the improvements to the Lansdale Station area. The project includes construction of a fully accessible 680-space parking garage at the Lansdale Regional Rail Station, resulting in a total of 895 parking spaces at the station. A pedestrian overpass will provide a direct connection to a future Transit Oriented Development (TOD) project on the Borough's Madison Avenue parking lot. In addition, the following Lansdale area companion improvements will be advanced: Enhancements to the Main Street entrance to the station; construction of a bus layover area on Railroad Street south of Main Street adjacent to the tracks; and construction of a new station at 9th Street (complete). The total project cost is \$43.25 million.

Safety is a key objective of SEPTA's Strategic Business Plan. All projects are grounded in a safety-first methodology. This new program addresses SEPTA's goal to provide passengers with safe, reliable, and efficient transportation. The program includes projects that will improve station, tunnel, and facility ventilation systems, interoperable communications, bus operations, and security infrastructure. Currently programmed projects include:

- Allegheny Garage Ventilation - \$3.67 million (FY 2017-2018)
- AT&T and Suburban Stations Ventilation Improvements - \$20 million (Prior Years-FY 2018)
- Bus Turn Alerting System - \$4.63 million (FY 2017-2019)
- Jefferson Station Platform Ventilation System - \$5.08 million (Prior Years-FY 2018)
- Midvale Facility and Security Enhancements - \$26.7 million (FY 2017-2021)
- Pump Rooms - \$10 million (FY 2022-2028)
- Radio Interoperability - \$24.89 million (Prior Years-FY 2019)
- Safety and Security Infrastructure Hardening Program - \$14 million (FY 2017-Future Years)
- Tunnel Ventilation Evaluation - \$1.3 million (Prior Years-FY 2017)
- Wayne Junction Yard Security Improvements - \$2.5 million (FY 2017-2018)

**INTERSTATE MANAGEMENT PROGRAM
FOR THE FY2017 TIP FOR DVRPC
SUBREGION**

I-95 RECONSTRUCTION PROJECT ROADMAP

The I-95 Corridor, a major facility built in the 1960s, is home to many regional destinations. These destinations include sports, recreational and entertainment venues, employment centers like Center City Philadelphia, and major transportation/port facilities such as the Philadelphia International Airport and several port terminals. It also provides access to portions of New Jersey and Delaware via connections with other interstates and state routes.

More than \$2 billion will provide for PennDOT's long-term, multi-phase initiative to rebuild and improve Interstate 95 in Pennsylvania. Over the next decade, PennDOT will focus on reconstructing an eight mile stretch of Interstate 95 between Interstate 676 and Cottman Avenue north of Center City Philadelphia. The five sections that comprise what is known as "Sector A" (GIR, CPR, BSR, BRI, and AFC) are reflected in more than 30 separate MPMS#'s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the Regional Highway Program of the DVRPC TIP. Construction is currently active at the Cottman/Princeton Interchange (CPR), at the Betsy Ross Bridge/Aramingo Avenue Interchange (BRI), and at the Girard Avenue Interchange (GIR). Two other sections, at the Bridge Street Interchange (BSR) and from the Frankford Creek, south of the Betsy Ross Interchange, to Allegheny Avenue (AFC) are in varying stages of design as engineers work out the details of rebuilding the interchanges and the connecting segments of I-95. Table 13, on the next page, shows a breakdown of the individual projects and programming amounts in the FY2017 STIP.

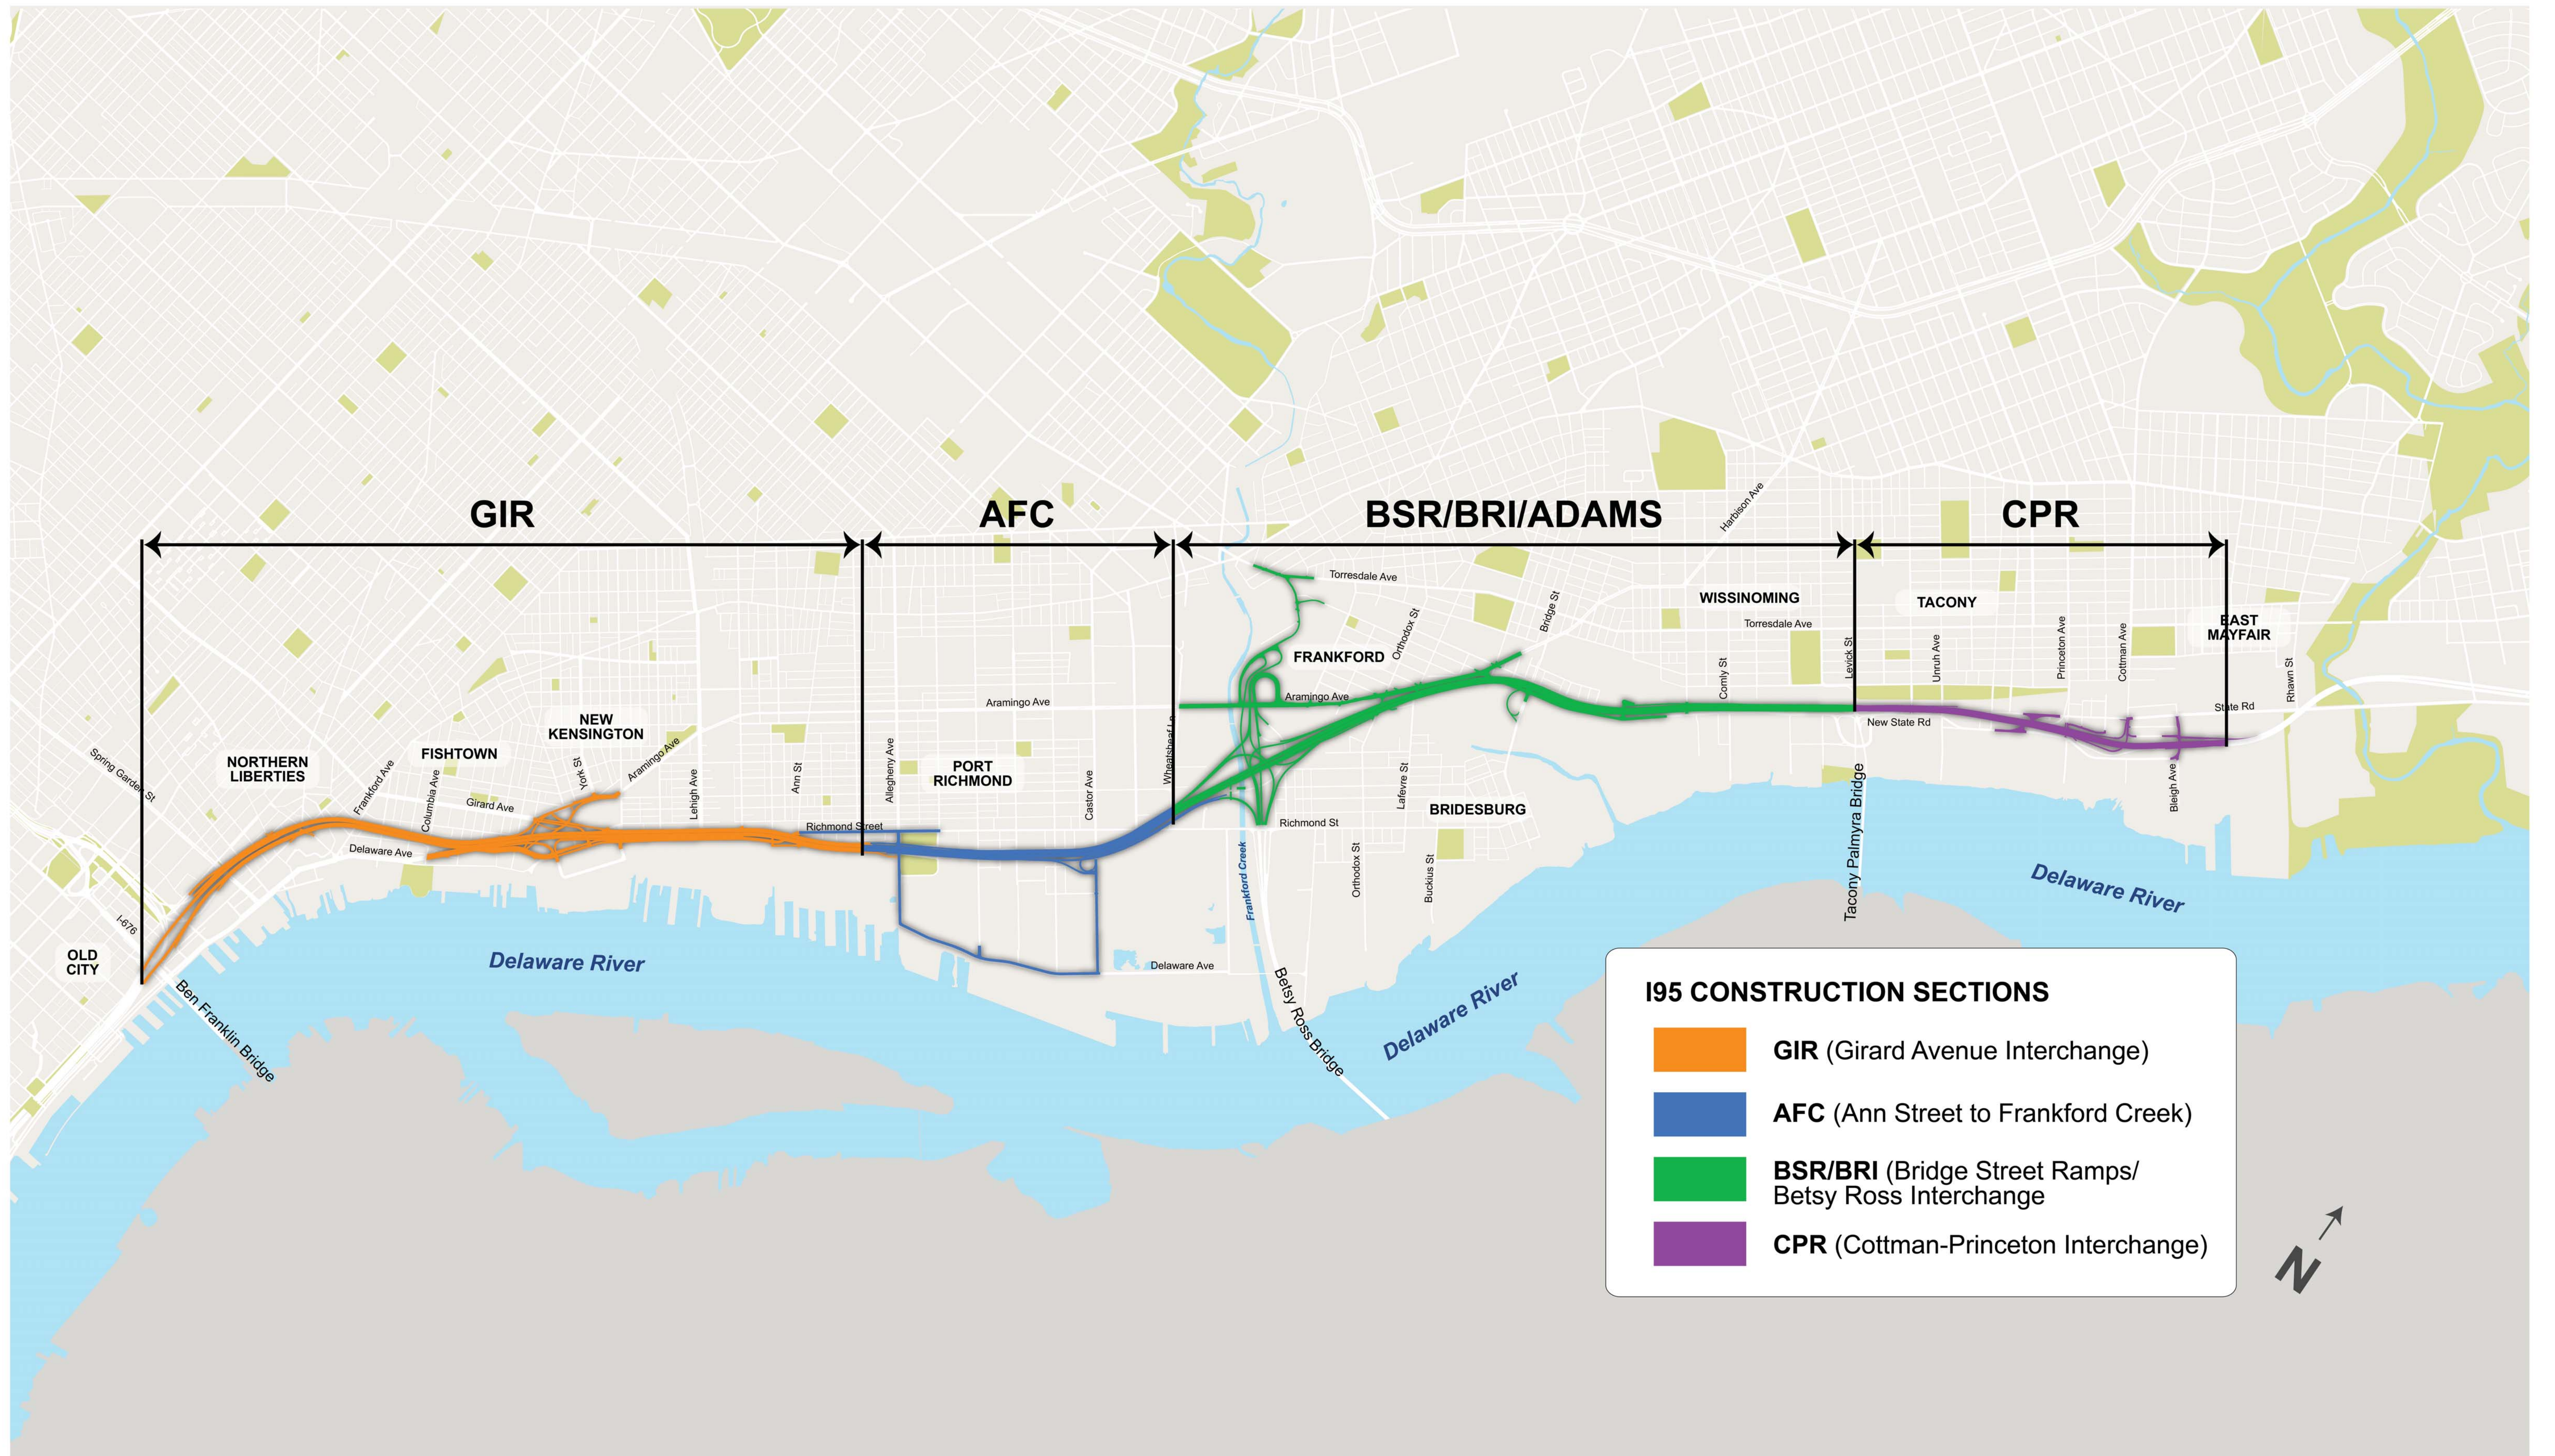

In addition, PennDOT has a number of other projects that are smaller in scope but significant nonetheless presently in design or under construction on I-95 in Philadelphia, Bucks County and Delaware County (Sectors B and C). And there is more work still yet to be added to the region's long range transportation improvement program that will methodically rebuild the entire interstate over time. As engineers and contractors redesign and rebuild I-95 and its interchanges, planners and community groups are exploring ideas for creative, green and sustainable ground-level enhancements for those living and working in the neighborhoods along the corridor so that appropriate pedestrian, bicycle, and transit facilities along the corridor may also be expanded depending on the particular construction section.

The I-95 corridor in Pennsylvania is a complex network of bridge structures and roadway. Of the 51 miles of I-95 in Pennsylvania, 23% are located on bridge structures, with the remaining being at-grade roadway. Both assets are quickly deteriorating and in need of major rehabilitation. Some segments are beyond the point of maintenance. Sector A projects pose particular design, construction and traffic management challenges given their location within densely populated Philadelphia neighborhoods and their proximity to port facilities, an active major north-south rail line and the Delaware River waterfront.

Table 13: I-95 FY2017 STIP Funding

PROJECT MANAGER: TSS/P. Berthold

CMP: Major SOV Capacity

CMP Subcorridor(s): 4D, 8A

This project is a component of the Statewide Interstate Management Program (IMP). The project entails the reconfiguration of the interchange connecting I-95 and US 322 and the interchange of US 322 and Bethel Road. The project area extends along I-95 from just south of the US 322 interchange north to the Commodore Barry Bridge Off Ramp and along US 322 from the I-95 interchange to SR 452 (Market Street) to the west. Among other safety issues, a major weave across three high volume lanes of traffic occurs when vehicles enter I-95 from US 322 eastbound and are destined to US 322 eastbound and the Commodore Barry Bridge. The area along I-95 has been recognized as a Physical Highway Bottleneck under the FHWA's Significant Traffic Bottleneck Initiative.

Alternatives for the interchange will include providing additional auxiliary lanes on I-95 between Highland Avenue and the Commodore Barry Bridge ramps at I-95. I-95 SB may include the existing three through lanes plus an additional fourth auxiliary lane between ramps. I-95 NB may include the existing three through lanes, the existing auxiliary lane and an additional auxiliary lane. A point of access study will be prepared which will include an evaluation of providing two direct movements that currently are not provided at the interchange: I-95 NB to US 322 WB and US 322 EB to I-95 SB. The project will also entail the bridge rehabilitation or replacement of 5 existing bridges including Highland Avenue over I-95. The US 322 bridge over CSXT, has been broken out to a separate MPMS#104343, and will be funded under the DVRPC TIP.

This project is integral to the Delaware Valley Freight Corridors Initiative.

PROJECT MANAGER: Chuck Davies ADE Design

CMP:

This project will provide for the active management of transportation and demand by providing operational improvements on I-76 and supporting arterials between the PA Turnpike and the US 1 interchanges with a series of measures that will allow for the ability to dynamically manage recurrent congestion based on prevailing and predicted traffic conditions through the following:

- Installation of systems and devices for variable speed limits and queue detection-- Speeds will be dynamically changed based on road, traffic and weather conditions. Warning signs will be used to dynamically display alerts to drivers that congestion and queues are present. The limits for this work are as follows: PA Turnpike to US 1.
- Dynamic lane assignments, shoulder, and junction control improvements-- The shoulders will be dynamically controlled along with travel lanes for opening/closing on a temporary basis in response to increasing congestion or incidents. This work includes reconstruction of shoulders up to current standard width and depth for part time shoulder use, and may necessitate increasing pavement or bridge deck width where insufficient, and lengthening of overhead bridge spans as required. Bridge and roadway drainage and storm water management will be improved as required. It is expected that part time shoulder use will be provided on I-76 in both eastbound and westbound directions from the PA Turnpike to I – 476, and on I-76 westbound from US 1 to Belmont Avenue as it relates to Junction controls for I-76 WB from City Avenue (US 1).
- Adaptive ramp metering will be used to dynamically adjust signals at the ramp entrances to proactively manage vehicle flow from access roads. The Limits are from the PA Turnpike to US 1.
- Installation of systems and devices for continuous monitoring of the transportation network, whether by video or other detectors, to aid in traffic incident management coordination and primary /secondary crash reduction, throughput increases, reducing speed differential in traffic flow and increasing trip reliability. The Limits are PA Turnpike to US 1 and it includes US 202, US 422 and US 1 and access roads.
- Installation of a responsive traffic signal system to be coordinated real time with the Regional Transportation Management Center. This should include the traffic signal system network in the proximity of I-76. Arterial signals will be coordinated with ramp metering. Transit signal priority included where applicable. Installation of communications network as required. The limits include Ridge Pike and PA 23 (Conshohocken to US1) .
- Enhanced coordination of operations with SEPTA on bus or regional rail that is parallel to the I-76 corridor including dynamic messaging on DMS to motorists of available parking / travel times of alternate mode and travel availability .

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is the design parent for I-95 Reconstruction SR 0095 Section BSR, also known as the Bridge Street Ramps section.

The overall section improvements of BSR consist of eliminating the lane drop at the James St. ramp in the southbound direction and eliminating the add lane at the Bridge St. on-ramp in the northbound direction. The proposed SR 0095 will have four lanes in each direction from Orthodox St. to Levick St. with exclusive acceleration/deceleration lanes. The project includes the replacement of six mainline structures. All retaining walls supporting SR 0095 will be totally reconstructed to support the new widened roadway and ramps. In addition, the project consists of 1.7 miles of reconstruction and realignment along SR 0095, as well as 0.7 miles of reconstruction along Tacony Street from Aramingo Ave. to the North Delaware Ave. Extension to the east. Approximately 1.4 miles of reconstruction along Aramingo Ave. is anticipated from Wheatshaf La. to the south to the Amtrak bridge to the north. A portion of Aramingo Ave. will also be widened from Orthodox St. to Tacony St. along the SR 0095 side of Aramingo Ave. The Aramingo Avenue/Betsy Ross Interchange will be reconfigured to construct a portion of the Adams Ave. Connector to intersect Aramingo Ave. adjacent to the Frankford Creek Bridge. Additional ramps will be constructed between the Betsy Ross Bridge and the SR 0095/Aramingo Ave. Interchange to accommodate all traffic movements from the Betsy Ross Bridge and from SR 0095 (MPMS 79903 - SR0095, Sec BR0). These new ramps will serve to accommodate the increased traffic volumes from the removal of two ramps at the Bridge St. Interchange. One of the ramps to be removed is an off-ramp from SR 0095 NB to Aramingo Ave. NB. The other ramp to be removed is an on-ramp from Aramingo Ave. SB to SR 0095 SB.

As part of this project, North Delaware Ave. will be extended approximately 1.3 miles from Buckius Street to Tacony St. This will include a new bridge over Old Frankford Creek. The project also consists of removing the SR 0095 SB off-ramp at the Bridge St. Interchange (at James Street), and the removal of the Bridge St. on-ramp to SR 0095 NB. These ramps are being moved further north to the intersection of Tacony St. and the North Delaware Ave. Extension. A SR 0095 SB off-ramp will provide direct access to Tacony St. and the North Delaware Ave. Extension. A new on-ramp from Tacony St. and the North Delaware Ave. Extension will provide access to SR 0095 NB.

The BSR section also includes the construction of the Frankford Creek Greenway along Aramingo Ave. from Wheatshaf La. to the Adams Ave. Connector, and then along the Adams Ave. Connector to the adjoining MPMS #17782 project. A multi-use trail will extend further along Aramingo Ave. from the Adams Ave. Connector to the existing bicycle lanes on Orthodox St. and Margaret St. The East Coast Greenway will also be constructed along the North Delaware Ave. Extension to connect with the K&T Trail. The project will incorporate new traffic signals at 12 intersections and modifications to traffic signals at 5 intersections.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine St. and Cottman Ave. that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 30 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, 102309, and 103553 through 103564. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridors Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. Related sections of I-95 Reconstruction: MPMS #s 47811, 79908, 79910, 87784, 103562, 103563 and 103564.

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is the design parent of I-95 Reconstruction SR 0095 Section BRI, also known as the Betsy Ross Interchange.

The overall section consists of reconstructing 1.1 miles of the SR 0095 mainline roadway starting from the north side of the Wheatshaeaf Lane crossing, adjoining Section AFC, and ending at Orthodox Street, adjoining Section BSR. The lane drops (from 4 to 3) on SR 0095 will be eliminated from the Betsy Ross Interchange. Within Section BRI, the NB and SB collector-distributor roads, the Ramp X SB on ramp and Ramp Y NB off ramp will be demolished and removed. The proposed SR 0095 mainline will have four lanes in each direction from Wheatshaeaf Lane to the Orthodox Street/Pearce Street crossing. On the SR 0095 mainline, the project includes reconstruction of three dual structures (the dual structures over Frankford Creek; the dual viaduct structures over the Earth Fill area from the Betsy Ross Interchange to south of Orthodox Street crossing; and the dual structures over Orthodox and Pearce Streets). Section BRI includes the rehabilitation or replacement of the Conrail Shared Assets railroad bridges crossing SR 0095 and Ramps A and C.

In addition, the Aramingo Avenue/Betsy Ross Interchange will be reconfigured to realign the planned Adams Avenue Connector to intersect Aramingo Avenue adjacent to the Frankford Creek Bridge and to accommodate increased traffic volumes from the removal of the Bridge Street Interchange. In the Betsy Ross Interchange area, Section BRI also includes reconstruction of nine connecting bridge structure ramps (Ramp A from SR 0095 NB to Betsy Ross Bridge; Ramp B from Betsy Ross Bridge to SR 0095 SB; Ramp C from SR 0095 NB to Aramingo Avenue; Ramp D from Adams Avenue Connector to SR 0095 SB; Ramp EE from SR 0095 SB to Betsy Ross Bridge; Ramp F from SR 0095 SB to Aramingo Avenue; Ramp G from Aramingo Avenue to NB; Ramp H from Betsy Ross Bridge to NB; Ramp GH from Aramingo Avenue and Betsy Ross Bridge to NB; . Also, the missing connection from the Betsy Ross Bridge to Aramingo Avenue/Adams Avenue Connector will be built (Ramp I), and the missing connection from Aramingo Avenue/Adams Avenue Connector to the Betsy Ross Bridge will be built (Ramp JJ).

This project is funded by a portion of a \$51,254,972 TEA-21 Earmark (PA ID# 228/FED ID# 1847)

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2.4 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 30 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. IPD: 7

PROJECT MANAGER: CH2MHill/P. Conti

CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is the AFC Design Parent.

This project is the design parent of I-95 Reconstruction SR 0095 Section AFC, also known as the Ann to Frankford Creek section. The overall section improvements consist of rehabilitating or replacing 12 bridges and 0.8 miles of roadway. The limits of this project extend along I-95 from Ann Street to Frankford Creek for a length of approximately 1.3 miles. The Preferred Build Option for Section AFC will involve consolidating existing disjointed interchanges at Allegheny Avenue, Westmoreland Street, and Castor Avenue which will be reconfigured into two half interchanges: half-diamond interchange at Allegheny Avenue for Southbound I-95 and a partial clover interchange at Castor Avenue for Northbound I-95.

The existing off-ramp at Westmoreland Street will be removed, leaving a half-diamond interchange at Allegheny Avenue for I-95 Southbound. A new northbound on-ramp will be added Castor Avenue to create a partial-clover interchange at Castor Avenue for I-95 Northbound. The existing loop-ramp will be split to provide both access to I-95 Northbound and the Betsy Ross Bridge.

Existing I-95 has 4 lanes northbound and 4 lanes southbound. The proposed I-95 will have an auxiliary lane Southbound, between the Betsy Ross on-ramp and the off-ramp at Allegheny Avenue, and an auxiliary lane Northbound between the Girard Interchange and the off-ramp to the Betsy Ross bridge.

Complete reconstruction and widening of the existing pavement. Reconstruction or replacement of all existing bridges. Extend viaduct over playground from Westmoreland Street to Allegheny Avenue. Rehabilitate existing structure from Westmoreland Street to Tioga Street.

The four existing ramps (two at Allegheny, one at Westmoreland, and one at Castor) are all single lane ramps. The two ramps at Allegheny, and the two ramps at Castor will be single lane ramps, except at the termini of the off-ramps where they will be widened to two lanes at signalized intersections.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 20 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, and 102309. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#'s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridors Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance. Related sections of I-95 Reconstruction: MPMS #'s 47813, 79911, and 79912.

MPMS# 79685 **I-95: Cottman-Princeton Main Line and Ramps (CP2) (IMP)**

LIMITS: Levick Street to Bleigh Avenue

No Let Date

MUNICIPALITIES: Philadelphia City

MRPID:65

IMPROVEMENT: Intersection/Interchange Improvements

FC: 11; 14

AQ Code:2020M

PLAN CENTER:

IPD: 6

PROJECT MANAGER: George Dunheimer ADE CONSTR

CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction section of Section CPR, the Cottman-Princeton Interchange project (MPMS #47394 is the design parent).

This project provides for the reconstruction and widening of I-95 between Levick Street and Bleigh Avenue, including upgrades to several ramps. The project includes demolition and replacement of seven (7) bridges. The project also includes the relocation of Wissinoming Street between Princeton Avenue and Wellington Street, and the relocation of approximately 1500 feet of Philadelphia Water Department trunk line water and sewer. Six (6) new storm drainage pipes will be constructed from I-95 to the Delaware River.

I-95 Mainline work includes the reconstruction of I-95 from Levick Street to Bleigh Avenue. Four (4) lanes in each direction will be provided. The short existing sections of three (3) lanes in each direction between the off and on-ramps that create the existing bottleneck will be improved to four (4) lanes. Proposed ramp work includes: upgrades to the existing SB off-ramp at Bleigh Avenue (Ramp D); upgrades to the existing NB off-ramp at Cottman Avenue (Ramp B); and construction of a new SB on-ramp at Cottman Avenue (Ramp F). Associated construction will include: installation of I-95 corridor ITS upgrades, 7 structure replacements; 1 structure widening, 13 retaining walls; traffic signal construction; and realignment of New State Road under I-95 to improve the curves at that location.

Due to the ramp improvements and the elimination of the three (3) lane bottlenecks, Wissinoming Street will be relocated from Princeton Avenue to Wellington Street. Additionally, the existing 84" water main and 114" sewer main in existing Wissinoming Street will be relocated for approximately 1500'. To comply with stormwater management and requirements, six (6) new drainage outfall pipes will extend to the Delaware River. This will keep highway storm drainage separate from the City's combined sewer system.

Street trees, decorative lighting, and other aesthetic treatments will be incorporated based on discussion and outreach with the Tacony community.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. PROJECT MANAGER: George Dunheimer ADE CONSTR

CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of Section GIR (MPMS #17821). This construction contract will include reconstruction and widening of I-95 northbound to include 4 thru lanes plus a fifth auxiliary lane (12'-0" lane widths) from Columbia Avenue to north of Ann Street in multiple stages. The existing substandard shoulder widths (varies up to 10'-0") will be replaced with full width shoulders (varies up to 12'-0"). This contract will include reconstruction of the northbound Girard Avenue Interchange ramps (Ramps E and A). This phase will include demolition and replacement of numerous bridge structures, including I-95 NB over Palmer Street to Berks Street; I-95 NB over Aramingo Avenue to south of Girard Avenue; I-95 NB over Girard Avenue to Ann Street; I-95 NB off-ramp (Ramp E); and I-95 NB on-ramp (Ramp A). Also included will be completion of the surface street tie-ins with the northbound ramp terminals and the construction of associated retaining walls and sound barrier walls. Delaware Ave. will be reconstructed between Columbia Ave. and Aramingo Ave. and the temporary detour road will be constructed along Conrail's Port Richmond Yard and an associated retaining wall. A majority of the utility impacts will be limited to areas of work along the surface street crossing under I-95. This project is being coordinated with the I-95 Section CPR and Section AFC projects from a construction letting and geographical location standpoint.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in DVRPC region. More than \$2 billion will provide the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both direction by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion management, and drainage projects) in over 20 separate MPMS 3s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, and 102309. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS #'s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridor Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. A final alternative for bridge rehabilitation or replacement is determined upon federal national Environmental Policy Act (NEPA) or state Categorical Exclusion clearance. Related sections of I-95 Reconstruction: MPMS #'s 17821, 80094, 79685, 83640, 79826, 79828, 102304, 102305.

IPD: 1

PROJECT MANAGER: EE/E. Elbich

CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP). This construction contract will include reconstruction and widening of I-95 southbound to include 4 thru lanes plus a fifth auxiliary lane (12'-0" lane widths) from Columbia Avenue to north of Ann Street in multiple stages. The existing substandard shoulder widths (varies up to 10'-0") will be replaced with full width shoulders (varies up to 12'-0"). This contract will include reconstruction of the southbound Girard Avenue Interchange ramps (Ramps B, B Spur and D). This phase will include demolition and replacement of numerous bridge structures, including I-95 SB over Girard Avenue to Ann Street; I-95 SB over Aramingo Avenue to south of Girard Avenue; I-95 SB over Berks Street; I-95 SB over Montgomery Avenue; I-95 SB over Palmer Street; I-95 SB off-ramp (Ramp B); I-95 SB off-ramp to Aramingo Avenue SB and Delaware Avenue (Ramp B Spur); I-95 SB on-ramp (Ramp D); and Aramingo Avenue SB over Ramp B, Girard Avenue and Spur A. Also included will be completion of the surface street tie-ins with the southbound ramp terminals and the construction of associated retaining walls and sound barrier walls. Aramingo Ave. will be reconstructed between Delaware Ave. and Cumberland St. A majority of the utility impacts will be limited to areas of work along the surface street crossing under I-95. This project is being coordinated with the I-95 Section CPR and Section AFC projects from a construction letting and geographical location standpoint.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in DVRPC region. More than \$2 billion will provide the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both direction by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion management, and drainage projects) in over 20 separate MPMS 3s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, and 102309. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS #s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridor Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. A final alternative for bridge rehabilitation or replacement is determined upon federal national Environmental Policy Act (NEPA) or state Categorical Exclusion clearance. Related sections of I-95 Reconstruction: MPMS #s 17821, 80094, 79685, 83640, 79826, 79828, 102304, 102305.

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of Section GIR (MPMS #17821). This project provides for the reconstruction, rehabilitation, and widening of I-95 between Race Street and Shackamaxon Street, and the reconstruction of the northern Vine Street interchange ramp connection with I-95. This project includes rehabilitation, deck replacement, demolition, and replacement of eight bridges. This project will be split into two different section (GR5 and GR6 - northbound and southbound) for letting purposes on the future (see MPMS #102304). Overall cost of the Race to Shackamaxon section is approximately \$300 million for both northbound and southbound directions.

Construction programming extends beyond the 12-year period. \$137,000,000 total is cash-flowed from FY2027 to FY2030 and is part of the construction cost.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in DVRPC region. More than \$2 billion will provide the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both direction by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of Section BRI Betsy Ross Interchange (MPMS #47812). The project includes the required ramp construction to complete and/or improve the interchange connections from the local street system (Aramingo Ave) to I-95 and the Betsy Ross Bridge. This involves building the following ramp structures: Ramps C, D, EE, F, I (new), I (widened), and JJ. The associated approaches to these structures will be fully reconstructed, with exception of approaches of D, F, and JJ west of Aramingo Avenue. Temporary connections will be constructed to the existing ramp system. In addition, major utility relocations including the PWD culvert, PECO, and PGW are required. The PWD Culvert relocation is required in advance of the mainline construction and construction of the new ramps within this construction package. The PECO and PGW relocations are associated with Thompson Street Bridge Removal. This contract also includes approach pavements (Ramp EE and Ramp F) supported by column supported embankment and compensating fill. A new traffic signal will be constructed at Richmond Street and the Betsy Ross Bridge westbound off ramp intersection and a traffic signal upgrade will be constructed at Richmond Street and Lefevre Street intersection. See MPMS #47812 for an overall description of the SR 95 Section BRI section.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. PROJECT MANAGER: AECOM/P. Shultes

CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of Section BRI (MPMS #47812).

Project includes the northbound mainline construction from Wheetshaeaf Lane to SR 0095 north of Margaret St. This contract will also remove the northbound collector/distributor and ramp which connects I-95 northbound and the Betsy Ross Bridge to the local street system (Aramingo Avenue, Harbison Avenue, Tacony Street and Bridge Street). This traffic will be redirected to the ramps completed in the I-95 BR0 (MPMS #79903) project. This includes the demolition and/or replacement of numerous structures including I-95 northbound over Frankford Creek and construction of a northbound I-95 viaduct over Orthodox, Pearce and Margaret Street. As a result of the collector/distributor ramp removal, a new ramp will be constructed to connect the Betsy Ross Bridge to I-95 NB (Ramp GH). Ramp G and Ramp H structures will also be replaced. A significant portion of the northbound mainline that currently is supported on structure will be removed and replaced with a geotechnically supported pavement using compensating fill and/or column supported embankment. This will eliminate approximately 176,500 SF of SD bridge deck. The existing noise wall in this section will be replaced. Local street landscaping and lighting will be incorporated in consultation with the Bridesburg community. PWD facility upgrades are anticipated to carry a portion of the mainline drainage to the Frankford Creek Outfall near Bridge Street. See MPMS #47812 for an overall description of the SR 95 Section BRI section.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2.4 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 30 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, 102309, and 103553 through 103564. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#'s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridors Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance. CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of Section BSR (MPMS #47811).

The BS1 section is a part of the I-95 Reconstruction, SR 0095 Section BSR, also known as the Bridge Street Ramps section. This phase of SR 95 Section BSR covers the I-95 reconstruction from Kennedy Street to Levick Street, the southbound I-95 off-ramp at the Bridge Street interchange, and the northbound I-95 on-ramp at the Bridge Street interchange, including work to:

- Reconstruct northbound and southbound I-95 (four lanes in each direction) from Kennedy Street to Levick Street;
- Relocate the James Street off-ramp further north and connecting it to Tacony Street at a new underpass to be located opposite the proposed Tacony Street/North Delaware Avenue Extension intersection;
- Relocate the Bridge Street on ramp further north to the proposed Tacony Street/North Delaware Avenue Extension intersection;
- Replace the bridges that carry I-95 over Fraley Street, Carver Street (i.e. the location of the southbound off ramp), Comly Street, and Van Kirk Street;
- Reconstruct Tacony Street from Kennedy Street to north of the North Delaware Avenue Extension; and
- Install a new traffic signal at the intersection of Tacony Street and the proposed North Delaware Avenue Extension; and
- Modify the traffic signals at Tacony Street and Fraley Street, Tacony Street and Van Kirk Street and Tacony Street and Comly Street; and
- Construct trail connections to the K&T Trail along Van Kirk Street and/or Comly Street.

For an overall description of the SR 95 Section BSR section, see MPMS #47811.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2.4 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 30 separate MPMS #'s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #'s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, 102309, and 103553 through 103564. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#'s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridors Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. PLAN CENTER:

IPD: 6

PROJECT MANAGER: AECOM/P. Shultes

CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout from Section BSR (MPMS #47811).

This phase of SR 95 Section BSR covers the I-95 reconstruction from just north of Margaret Street to Kennedy Street, and the removal of the northbound I-95 on-ramp at Bridge Street and the removal of the southbound I-95 off-ramp at James Street, which were relocated in the Section BS1 project (MPMS #79908). This project includes work to: (1) reconstruct northbound and southbound I-95 (four lanes in each direction) from just north of Margaret Street to Kennedy Street. The viaduct that carries I-95 over Tacony Street and Bridge Street will be replaced; (2) removal of the Bridge Street northbound on-ramp and the James Street southbound off-ramp; (3) reconstruct Tacony Street from Buckius Street to Kennedy Street; (4) modify the traffic signals at Bridge and Tacony Streets, and Bridge and James Streets; reconstruct Bridge Street to reduce the street width and add pedestrian and bicyclist safety features, and construct stormwater outfall(s) to Old Frankford Creek. For an overall description of SR 95 Section BSR section see MPMS #47811.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2.4 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 30 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, 102309, and 103553 through 103564. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridors Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance. Related sections of I-95 Reconstruction: MPMS #'s 47811, 79908, 79910, 87784, 103562, 103563 and 103564.

CMP: Major SOV Capacity

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of AFC (MPMS #47813).

Project includes the local road improvements in support of I-95 AF3 and AF4 (main line I-95). The project will optimize signal timings on the local roadway network including Aramingo Avenue, Allegheny Avenue, and Castor Avenue; pavement rehabilitation and reconstruction on Delaware Avenue between Castor Avenue and Allegheny Avenue; the additional of auxiliary lanes at the intersections of Aramingo and Ontario and Aramingo and Venango; new traffic signals at the intersections of Allegheny/Bath, Castor Avenue/I-95 ramp. The project will also include improvements to the Philadelphia Water Department Outfalls from I-95 to the Delaware River to accommodate stormwater management for the reconstruction of I-95. New signing, pavement markings, and lighting will be constructed on Allegheny Avenue, Delaware Avenue, and Castor Avenue which will serve as the connection between the split interchanges (NB interchange at Castor Avenue, SB interchange at Allegheny).

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 20 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, and 102309. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#'s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridors Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of Section GIR (MPMS #17821). I-95 Roadway Reconstruction/Mainline Crossover: Shackamaxon - Columbia. Project is total reconstruction and shoulder widening of I-95 between Shackamaxon St. and Columbia Ave. to allow future cross-overs, the addition of a continuous ramp lane in each direction, I-95 structure replacements over Shackamaxon St., Marlborough St., and Columbia Ave., removal of existing I-95 northbound off ramp (Ramp E) and associated retaining and sound barrier wall construction.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in DVRPC region. More than \$2 billion will provide the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both direction by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. CMP: Not SOV Capacity Adding

CMP Subcorridor(s): 4B

This project is a component of the Statewide Interstate Management Program (IMP) and will provide for Congestion Management Activities related to the reconstruction of I-95 through Bucks, Delaware, and Philadelphia counties, via a series of investments to enhance the capacity of the SEPTA regional rail lines parallel and closest to the I-95 corridor. This is to further the ongoing congestion mitigation as the construction activity increases on the corridor. Mainline work will expand on sections CP2 and GR2, to GR3, and GR4 to include the BSR/BRI and AFC sections in the near future. Actual effects of I-95 construction phasing is being monitored, and ridership is currently at capacity for the parallel regional rail. Enhancement of the capacity of SEPTA regional rail would be effective in relieving congestion construction zones. Improvements may include purchase of additional rolling stock; improvements for additional parking at regional rail stations; and yard, interlocking and storage improvements. Efforts may begin with the purchase of available rolling stock.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. This section serves as a placeholder for splitting GR5 (MPMS #79828) into 2 projects in the future. MPMS #79828 will continue to be referred as Section GR5. MPMS #103553 will be referred to as Section GR6. Further, funds currently shown in Later Fiscal Years will provide for congestion management improvements for the I-95 corridor construction operations of the sections active in design, including sections AFC, BRI, BSR, CPR, and GIR. The improvements emphasize mainline and ramp lane pavement markings, signals, signing and shoulder pavement rehabilitation to improve existing capacity beyond the limits of the active construction zones.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in DVRPC region. More than \$2 billion will provide the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both direction by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. DVRPC FY 2017-2020 TIP for PA

Pennsylvania - Interstate Management Program

Philadelphia

MPMS# 103557 I-95N Ann St-Wheatsheaf Lane (AF3)

New-B

LIMITS: I-95 Allegheny Ave. South of Frankford Creek

No Let Date

MUNICIPALITIES: Philadelphia City

MRPID:65

IMPROVEMENT: Intersection/Interchange Improvements

FC:

AQ Code:2035M

PLAN CENTER:

IPD:

PROJECT MANAGER: CH2MHill/P. Conti

CMP:

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of AFC (MPMS #47813).

Project will reconstruct I-95 from Clearfield Street to Wheatsheaf Lane, including reconstruction of the NB off-ramp to the Betsy Ross Bridge over Castor Avenue, reconstruction of the NB on-ramp from Castor Avenue, removal of the NB off-ramp at Westmoreland Street, and construction of a new NB off-ramp at Castor Avenue. I-95 traffic will be maintained on 3 lanes NB and 3 lanes SB during peak hours.

This project includes work on the following bridge structures:

*Westmoreland Viaduct (I-95 NB from Allegheny Avenue to Tioga Street) - Extend viaduct over playground from Westmoreland Street to Allegheny Avenue. Widen and Rehabilitate existing NB Structure from Westmoreland Street to Tioga Street.

*I-95 NB over Venango Street - Total Replacement

*I-95 NB over Castor Avenue - Total Replacement

*I-95 NB over Richmond Street - Total Replacement

*I-95 NB over Wheatsheaf Lane - Total Replacement

*Betsy Ross Ramp A Viaduct (NB) - Total Replacement

Also included is construction of associated retaining walls, sound barrier walls, and roadway on fill sections. The proposed I-95 will have 5 lanes northbound and 5 lanes southbound. New ramp movements are not being created, but are being relocated. The existing disjointed interchange will be reconfigured into split interchanges (a NB interchange at Castor Avenue, and a SB interchange at Allegheny Avenue).

Various sections of I-95 Reconstruction: MPMS #'s 47813 and 79911.

This project is integral to the Delaware Valley Freight Corridors Initiative.

PLAN CENTER:

IPD:

PROJECT MANAGER: AECOM/P. Shultes

CMP:

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout of Section BRI (MPMS #47812).

Project includes the southbound mainline construction from W heatsheaf Lane to SR 0095 north of Margaret St. This contract will also remove the southbound collector/distributor and ramp which connects Aramingo Avenue, Harbison Avenue, Tacony Street and Bridge Street to I-95 southbound and the Betsy Ross Bridge. This traffic will be redirected to the ramps completed in the I-95 BR0 (MPMS #79903) project. This includes the demolition and/or replacement of numerous structures including I-95 southbound over Frankford Creek and construction of a southbound I-95 viaduct over Orthodox, Pearce and Margaret Street. A significant portion of the southbound mainline that currently is supported on structure will be removed and replaced with a geotechnically supported pavement using compensating fill and/or column supported embankment. This will eliminate approximately 176,500 SF of SD bridge deck. The existing Conrail rail siding that services the Honeywell Chemical plant will be relocated. Local street landscaping and lighting will be incorporated in consultation with the Bridesburg community. PWD facility upgrades are anticipated to carry a portion of the mainline drainage to the Frankford Creek Outfall near Bridge Street. See MPMS #47812 for an overall description of the SR 95 Section BRI section.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2.4 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps. Appropriate pedestrian, bicycle, and transit facilities may also be expanded depending on the particular construction section. This reconstruction of I-95 has been divided into various "sections" (including GIR, CPR, BSR, BRI, AFC, Congestion Management, and drainage projects) in over 30 separate MPMS #s, most of which appear in the Interstate Management Program (IMP), and some of which appear in the DVRPC Regional Highway Program of the TIP. MPMS #s for the overall corridor include: 17821, 47394, 47811, 47812, 47813, 79683, 79685, 79686, 79826, 79827, 79828, 79903, 79904, 79905, 79908, 79910, 79911, 79912, 80094, 83640, 87784, 98207, 102304, 102305, 102309, and 103553 through 103564. Please refer to the DVRPC I-95 Reconstruction Project in Philadelphia Roadmap in the TIP for additional information about the various sections and corresponding MPMS#s as well as notations on future and previous projects which may not currently be active and do not appear in the IMP or TIP.

This project is integral to the Delaware Valley Freight Corridors Initiative. Project CMP (Congestion Management Process) commitments include strategies such as improvements for transit users, bicyclists, pedestrians, and drivers on the existing road network (operations). See DVRPC's 2007 and 2010 annual memoranda on supplemental CMP strategies for details related to this project. A final alternative for bridge rehabilitation or replacement is determined upon federal National Environmental Policy Act (NEPA) or state Categorical Exclusion clearance. Related sections of I-95 Reconstruction: MPMS #'s 47812, 79903, 79904, 79905, 103559, 103560 and 103561.

This project is a component of the Statewide Interstate Management Program (IMP) and is a construction breakout from Section BSR (MPMS #47811).

The project includes the required ramp construction to complete the interchange connections from Aramingo Avenue to I-95 and the Betsy Ross Bridge. This involves completing the Aramingo Avenue connections to ramps D, F, KK, and JJ west of Aramingo Avenue. Aramingo Avenue will be reconstructed for 0.5 miles from Wheatshaeaf Lane to Church Street, including replacement of the bridge over Frankford Creek. As part of the ramp work connecting Aramingo Avenue to I-95 and the Betsy Ross Bridge, a portion of the Adams Avenue Connector from Aramingo Avenue to Ramp D will also be constructed. The Adams Avenue Connector will be completed to Torresdale Avenue as part of the MPMS #17782 project. The Frankford Creek Greenway will be built along the east side of Aramingo Avenue and along the south side of the Adams Avenue Connector, including a short extension to Church Street.

This project includes upgraded/new traffic signals at the following intersections:

- Aramingo Avenue and Wheatshaeaf Lane
- Aramingo Avenue and Adams Avenue Connector
- Aramingo Avenue and Ramp F
- Aramingo Avenue and Church Street
- Church Street and Tacony Street

See MPMS #47811 for an overall description of the SR 95 Section BSR section.

I-95 is a major facility built in the 1960s which runs through Bucks, Philadelphia, and Delaware Counties in the DVRPC region. More than \$2.4 billion will provide for the repair, reconstruction and restoration of I-95 in Philadelphia for approximately eight miles between I-676/Vine Street and Cottman Avenue that PennDOT is currently working to improve in order to address critical repairs on aging bridges and interchanges, and improve traffic flow by adding new ramps and creating a more consistent four-lane highway in both directions by eliminating lane-drops and providing continuous lanes connecting the on-off ramps.
